

YASKAWA

AC SERVO DRIVES Σ -7 SERIES

e-motional
solution

Σ -7 Series of AC Servo Drives

Everyone's preferred choice of Servo Drives

Since the release of the first Σ series of Servo Drives in 1992, Yaskawa Electric has consistently made innovations to existing technologies to find solutions for problems that users experience. Users have always sought high-speed, high-accuracy, and easy-to-use products, and this demand rises every year.

In 2013, the Σ series of Servo Drives evolved into the Σ -7 Servo Drives, which provides users with the ultimate experience in seven key areas and delivers the optimal solutions that only Yaskawa can offer. With the superlative performance and outstanding ease of use of the Σ -7 series, Yaskawa can offer solutions that will make the Σ -7 Servo Drives the preferred choice of customers at any point in the life cycle of their systems.

1 Ultimate system performance pages M-4 to M-7

Superlative performance with improved efficiency and speed

Attention developers/engineers

Refer to pages M-6 and M-7 for examples of the high performance of the Σ -7 series in "pick and place" applications. Contact Yaskawa for details on this and additional applications.

2 Ultimate ease of use page M-8

No tuning required with the Σ -7 series upgraded tuning-less function to achieve stable movement with no vibration.

Attention developers/engineers production maintenance personnel

You can check the level of performance of actual operations with the use of demonstration units. Contact Yaskawa for a demonstration.

3 Ultimate environmental performance page M-9

Each product has improved specifications to meet even the most stringent environmental requirements. Servo Drives can now be used in different countries and regions, and under a variety of conditions.

Attention developers/engineers operators

Are there any operating environments that you have given up on? The Σ -7 servos have an increased ability to cope with temperature rises in systems, comply with the IP67 resistance to water immersion rating, and have greater global support (AC 240 V input and operable at an altitude of 2,000 meters*). Compact and energy saving systems can also be easily built with the Σ -7W two-axis SERVOPACKs.

*: At this altitude, the servo drives will operate at reduced ratings.

7 Ultimate compatibility page M-13

Programs and parameters used with Σ -V SERVOPACKs are compatible with Σ -7 SERVOPACKs. The performance of your systems can be easily enhanced with a simple replacement.

Attention developers/engineers

There is no need to change your system design because the sizes of the Σ -V Servo Drives are the same as those of the Σ -7 series. The improved shape of the mounting screws makes them easier to secure. With the ensured compatibility of programs and parameters, it is easy to replace Σ -V Servo Drives with Σ -7 Servo Drives.

6 Ultimate lineup page M-12

You can choose from a rich product lineup of the Σ -7 series as well as from the compatible products of Yaskawa's partner companies to easily build just the right system for your needs.

Attention developers/engineers

- Compatible products made by our partner companies are also available. You can prepare all the motion devices required for your system with our one-stop, all-in-one service.
- It is now possible to drive rotary, Linear, or Direct Drive Servomotors using the same SERVOPACK model in the Σ -7 series. This helps to reduce the number of Servo Drives that are put in storage.

5 Ultimate support page M-11

Full support is available from selection to maintenance. Maintenance is easier because product information can be viewed by using a smartphone.

Attention developers/engineers maintenance personnel

Services* that take full advantage of the latest technology, such as cloud storages, QR codes, and smartphones are readily available. They add another dimension of convenience and ease in terms of product information control and maintenance work.

*: MechatroCloud is available in Japan only.

QR code reading with a smartphone.

Note: QR code is a registered trademark of Denso Wave Incorporated.

4 Ultimate safety and security page M-10

The Σ -7 Servo Drives satisfy the IEC 61508 safety integrity level 3 (SIL 3). Safety is also ensured with temperature sensors mounted in products. These Servo Drives can be used as system components with safety guaranteed.

Attention developers/engineers operators maintenance personnel

It is absolutely essential to ensure the safety of systems and protect against temperature increases. The Σ -7 Servo Drives are fully equipped with all the necessary safety measures, which reduces the amount of work required for system design and maintenance.

Ultimate system performance

1

The high-performance of Σ -7 SERVOPACKs translates into ultra-high-speed and ultra-high-accuracy control, which maximizes system performance.

Σ -7S Single-axis SERVOPACKs

- ★ 3.1 kHz response frequency
- ★ Optimized for specific applications:
New models in EX and FT series to be released
- ★ Improved vibration suppression

Ripple compensation

Σ -7 SERVOPACKs can reduce speed ripples caused by motor cogging, even for machines for which speed loop gains cannot be set high. This ensures smooth operation.

Enhanced vibration suppression function

Notch filter

Suppresses high-frequency vibrations of 500 Hz or higher.

Number of filters increased from 2 to 5.

Anti-resonance control

Suppresses vibrations at frequencies ranging from several hundred Hz to 1 kHz.

Vibrations can now be suppressed at multiple frequencies in comparison with one frequency in earlier models.

Vibration suppression

Suppresses vibrations at low frequencies (30 Hz and lower).

Vibrations can now be suppressed at two different frequencies (in comparison with one frequency in earlier models).

These functions can be adjusted automatically using the autotuning function.

Σ -7W Two-axis SERVOPACKs

- ★ Two-axis SERVOPACKs
(200 W x 2 axes to 1 kW x 2 axes)
- ★ 3.1 kHz response frequency
- ★ Improved vibration suppression

Σ -7C Two-axis SERVOPACKs with Built-in Controllers

- ★ 3.1 kHz response frequency
- ★ Build small-scale equipment system without PLC using one SERVOPACK.

SERVOPACK

SERVOMOTOR

Model

SGM7M	3.3 W ■ 33 W
SGM7J	50 W ■ 750 W
SGM7A	50 W ■ 7 kW
SGM7P	100 W ■ 1.5 kW
SGM7G	300 W ■ 15 kW

Refer to pages M-20 to M-23 for the details on the features of Direct Drive Servomotors and Linear Servomotors.

Σ -7 Rotary Servomotors

- ★ Compact dimensions
(approx. 80% smaller than our earlier models.)
- ★ High-resolution 24-bit encoder incorporated
(16,777,216 pulses/rev)
- ★ Maximum torque: 350%
(small capacity)

High-resolution, 24-bit encoder

Σ -7 Servomotors (50 W or greater) use encoders with a resolution that are 16 times higher than those used in Σ -V Servomotors.

Encoder resolution comparison

Σ -V series	Σ -7 series
20 bits = 1 million pulses/rev (approx.)	24 bits = 16 million pulses/rev (approx.)
	16 times higher!

Solution for 50-W or greater models.

Servomotors with 24-bit batteryless absolute encoders have also been added to the lineup.

High efficiency and low heat generation

Σ -7 Servomotors use an optimized magnetic circuit that improves motor efficiency and reduces heat generation.
(comparison with typical models.)

About 20% reduction in temperature increase!

(under the same conditions)

Σ -V series

Σ -7 series

Example Solving problems in “pick and place” applications

- Issue** How can we reduce takt times?
- Issue** How can we improve positioning accuracy?
- Issue** How can we suppress vibration created by speed acceleration?
- Issue** How can we achieve stable operation with or without workpieces?

“Pick and place” refers to the actions involved in picking up an object in one location and placing it in another location.

Issue 1 We need to reduce takt times.

Problem

Case 1

Vibration occurs after servo gain is increased.

Without anti-resonance control adjustment

A Position deviation
B Torque reference
C Positioning Completion signal

Case 2

Servo gain was successfully increased by first using the anti-resonance control adjustment, and then vibration occurred at a different frequency.

With anti-resonance control adjustment

Solution

Servo gain can be increased by using the enhanced anti-resonance control adjustment function.

With improved anti-resonance control adjustment

Reduces system takt times

Issue 1 We want to increase productivity by suppressing vibration of equipment.

Problem

Vibration occurs at two different frequencies at the edges of equipment and it takes a while for the vibration to stop.

Solution

Vibration at two different low-frequencies is suppressed simultaneously with the automatic adjustment function.

Issue 2 We want to improve positioning accuracy to handle parts that are becoming increasingly smaller.

Problem

Positioning accuracy needs to be improved because parts that are handled are becoming increasingly smaller.

Solution

High-precision positioning becomes possible for precision workpieces by replacing the existing drive with the Σ -7 Servo Drive.

Σ -7S SERVOPACKs

Highest performance in the industry
 • 3.1 kHz response frequency
 • Improved vibration suppression

Σ -7 Servomotors

High-resolution encoders
 24 bits = 16,777,216 pulses/rev
 For 20 mm lead ball screws
 1.2 nm resolution

Yaskawa's original tuning-less function has undergone further development. Stable operations can be achieved without having to adjust gains.

No need to adjust servo gains

With Yaskawa's original tuning-less function, systems can run without vibration for a load with 30 times (max.) of load moment of inertia. Systems remain stable even with load changes during operation.

	Σ -V Series	Σ -7 Series
Allowable load moment of inertia ratio	30 times (max.)	30 times (max.)
Max. control gain	Speed loop gain 40 Hz (approx.)	Speed loop gain 70 Hz (approx.)

When the allowable load moment of inertia ratio is 30 times:

Setup time reduced

Takt time reduced

Solution Example Robot

The robot's arm maintains stable movements even when the moment of inertia changes due to changes in the robot's posture.

- **Improved response**
Response is about twice as fast as before and requires no adjustment.
- **Improved stability**
Stable operation is assured even in systems with load fluctuations.
- **No need for gain adjustments**
High-level performance is assured although no tuning is required.

The Σ -7 Servo Drives can be used in harsh environments and conserve energy.
Optimal systems can be easily set up in different countries and under a variety of conditions.

Satisfies specifications for use overseas and in harsh operating conditions

- 240 VAC supply voltage also supported
- High-altitude use increased to 2,000 meters above sea level*
- Maximum ambient temperature raised to 60°C*

* Derating required.

Waterproof protective structure upgrade to IP67 rating

[SGM7J, SGM7A (IP22 for 7.0 kW), and SGM7G models]

Protective Structure (IEC 60034-5)

IP 67

◎ Rating for protection from water:

The units can be used even when they are immersed in water under specific conditions (immersed at a depth of 1 m below the surface of the water for 30 minutes).

◎ Rating for protection from contact and entry of solid foreign objects:

Safe dust-proof structure

Structure is completely protected from the entry of dust.

Solution Example

Regenerative energy effectively used to help save energy

Issue

Regenerative power used to be converted to heat by using regenerative resistors. With global warming, CO₂ emissions must be cut by reducing power generation that produces CO₂, such as thermal power.

Solution

- By replacing the existing amplifiers with the Σ -7W 2-axis SERVOPACKs or using a DC bus connection, the regenerative energy of multiple axes can be used as the drive energy.
- This means that the energy inside the system can be utilized more effectively.
- Status of energy consumption in the system can be viewed on a display by using machine controllers.

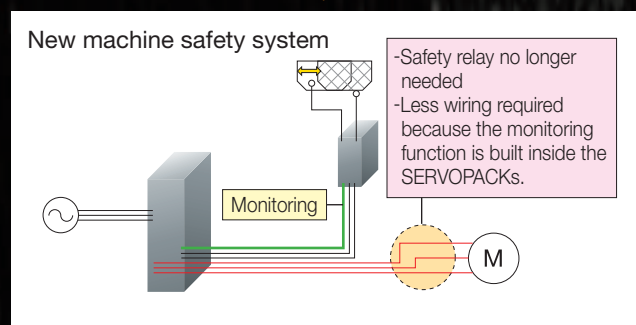

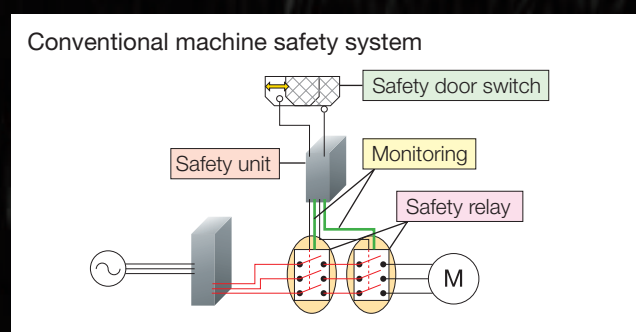

Energy consumption monitoring display (image)

Systems can be operated safely because the Σ -7 Servo Drives comply with safety standards and safety is ensured by monitoring.

Satisfies requirements of the SIL 3 of the IEC 61508 functional safety standards (first in Japan)

Certification will make it easier to set up systems that conform to safety standards for press machines and other systems in Europe and other regions. Certification also helps reduce the number of hours required for wiring and of peripheral devices. **Complies with Stop Category 0 (Safe Torque Off)**

	Safety standards	Performance level & category
Safety of machinery	EN ISO13849-1	PLe (CAT3)
	IEC 60204-1	Stop Category 0
Functional safety	IEC 61508	SIL 3
	IEC 62061	SIL CL3
	IEC 61800-5-2	STO

- The safety function works even for a single problem.
- The safety function is enhanced with compliance with the EN ISO 13849-1 PLe (performance level e).

Note: Although the safety performance level of the Σ -V series Servo Drives is PLd (performance level d), the benefits described in the figure on the left apply.

Systems that need to satisfy the required performance level e (PLr e) can easily be configured.

Protect systems from high temperatures

Σ -7 SERVOPACKs and Servomotors are equipped with temperature sensors that can directly monitor temperatures of machines and detect abnormalities to prevent failures. Real-time temperatures can be viewed on a display by using Machine Controllers.

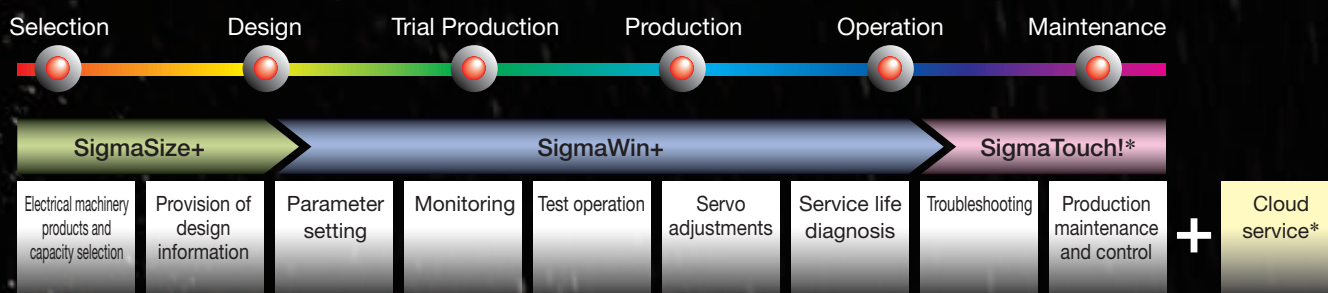

Protection from abnormal temperatures

Temperature monitoring display (image)

Cloud-based storage of product data facilitates data retrieval when needed.

Maintenance throughout a product's service life is improved and simplified with SigmaTouch!, Yaskawa's smartphone application.

Single or multiple orders possible after specifying parameters*

Customers can now place single or multiple orders for SERVOPACKs in the Σ -7 series after specifying parameters at the factory shipment stage. No longer is it necessary to write the parameters at the system assembly site, which means that production lead times can be reduced.

Note: MechatroCloud is available in Japan only.

Product management and maintenance service*

Product information can be easily viewed by using SigmaTouch!, Yaskawa's smartphone application. To view, simply hold your smartphone over the QR code of the product.

Improve troubleshooting*

- If you have a smartphone, troubleshooting information can be accessed by reading a product's QR code.
- Automatic tracing is possible when a SERVOPACK alarm occurs. This allows you to detect and solve problems promptly.

Features:
Simply access the MechatroCloud service* and hold your smartphone over the QR code of the product. You can access the product data stored in the MechatroCloud, and view the manual for that product.

Note: MechatroCloud is a new cloud service provided by the Yaskawa Electric.

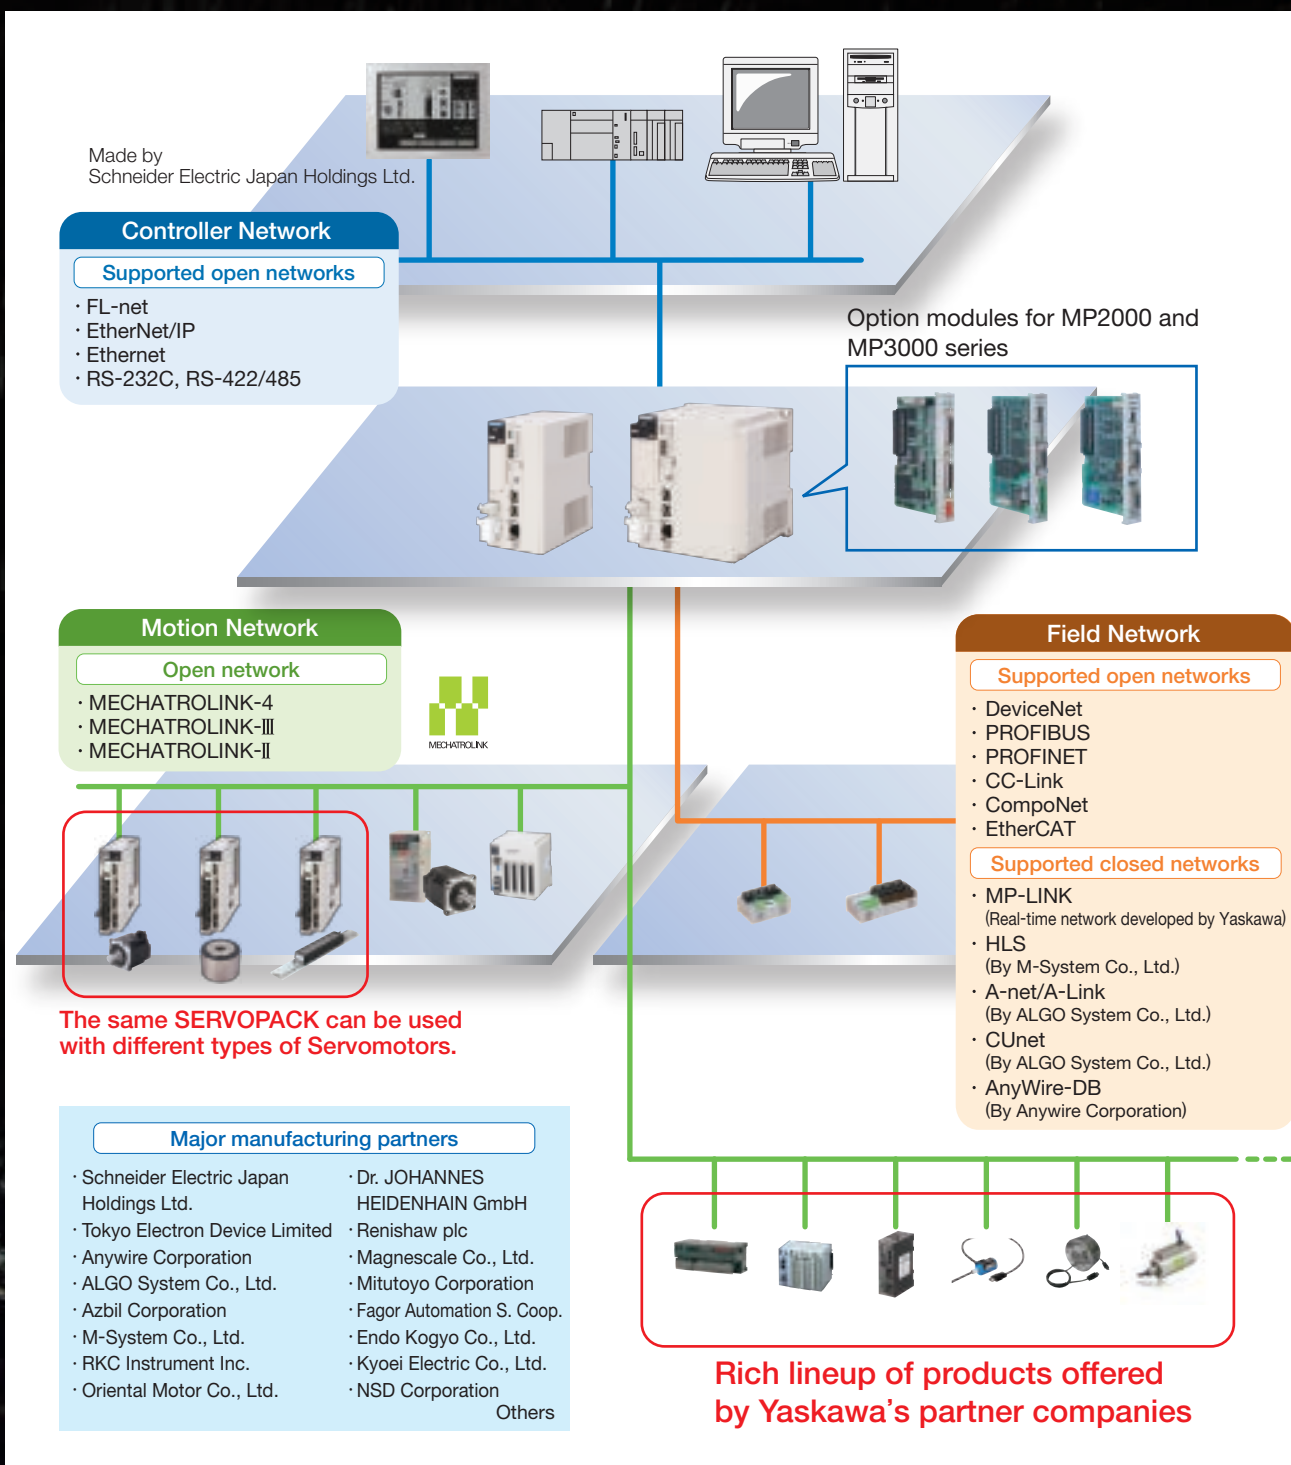

Achieve planned maintenance by monitoring the remaining service life

The service life of the maintenance can be estimated, and the users are notified when the parts should be replaced. System failure can be prevented because parts can be replaced before products break.

*: MechatroCloud is available in Japan only. For details, refer to pages M-14 to M-19.

You can construct a system that exactly meets your requirements using communications networks and the rich lineup of products offered by Yaskawa's partner companies.

Compatibility with earlier series is assured. You can improve the performance of your system by replacing devices currently used with Σ -7 Servo Drives.

SERVOPACK

Installation interchangeability with the models in the Σ -V SERVOPACK having the same capacity is featured for the SERVOPACKs.

The Σ -7 SERVOPACKs have improved shapes for mounting holes. With this new shape, it is much easier to insert a screwdriver.

Mounting holes on Σ -V topMounting holes on Σ -7 topMounting holes on Σ -V bottomMounting holes on Σ -7 bottom

Note: A special attachment is required for SGD7S-470A to -780A SERVOPACKs. Contact your Yaskawa representative for details.

A parameter conversion mode is provided. The parameters of the Σ -V SERVOPACKs can be used with the Σ -7 SERVOPACKs, when using the SigmaWin+ parameter converter.

Servomotor

- Installation interchangeability with the models in the Σ -V SERVOPACK having the same capacity is featured for the SERVOPACKs.

- Easily-replaceable system configuration

Currently used incremental system

Batteryless absolute encoder

Replaceable by changing only the motor. SERVOPACK and cables can be left as is.

MechatroCloud is a cloud service offered by the Motion Control Division of Yaskawa Electric. With this service, it is now easier and more convenient to use Yaskawa's motion control products. A wide range of services are now available through Yaskawa's website, smartphone applications, and QR codes.

BTO Service
Website

BTO Service

You can order customized SERVOPACKs from the website!

Use BTO
for
free!

Customize parameter settings

Parameters and text to be printed on nameplates can be registered on the MechatroCloud website. This service is available for all orders.

Reduce equipment assembly time

Ready-to-use SERVOPACKs will be delivered to you with parameters set and text printed on the nameplate.

Refer to page M-16 for an example of how BTO can be used.

Example of Nameplate

Model : SGD7S-R70A20A000000B

The last digit (14th) is "B".

BTO No. : ← Indicates BTO products with customized specifications.

012345-000001

Company code Serial number

Text (equipment name, etc.) : XX inspection equipment

Text (axis name, etc.) : Transfer axis A

Text can be added here.

In the BTO (build to order) service available from Yaskawa, parameters for SERVOPACKs are set to the values specified by customers when placing orders. Customers can order customized SERVOPACKs by simply registering parameter specifications on the website.

Standard product

Parameter file specified by customer*1

BTO product

Parameter values are set to customer specifications.

Text*2, such as "Axis name", can be printed on the nameplate.

Note: To use MechatroCloud service, you must register your name under the corporate membership of the e-mechatronics website, the Yaskawa Electric website for product and technical information.

*1: Use a parameter file for version 5.71 or later versions of SigmaWin+.

*2: Alphanumeric characters and some symbols can be used for the text (equipment name and axis name).

MechatroCloud Introduction Videos – Now on YouTube

Use the standard bar code reader on your smartphone to read these codes and view videos on YouTube.

BTO service

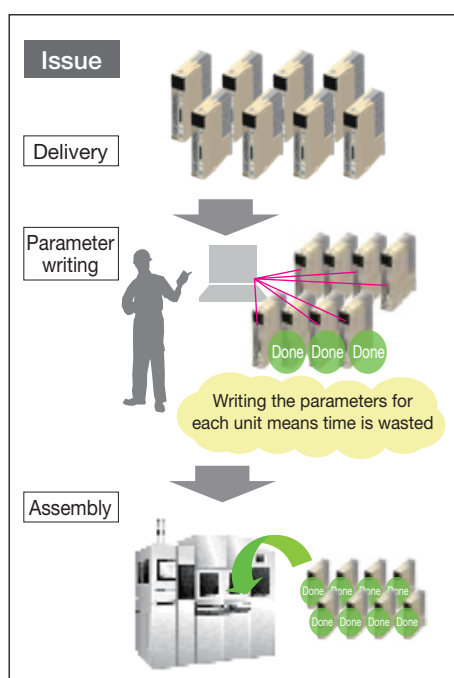

SigmaTouch!

BTO Service

Single or multiple orders possible after specifying parameters (BTO)

Customers can now place single or multiple orders for SERVOPACKs in the Σ -7 series after specifying parameters at the factory shipment stage. It is no longer necessary to write the parameters at the system assembly site, which means that production lead times can be reduced.

Solution

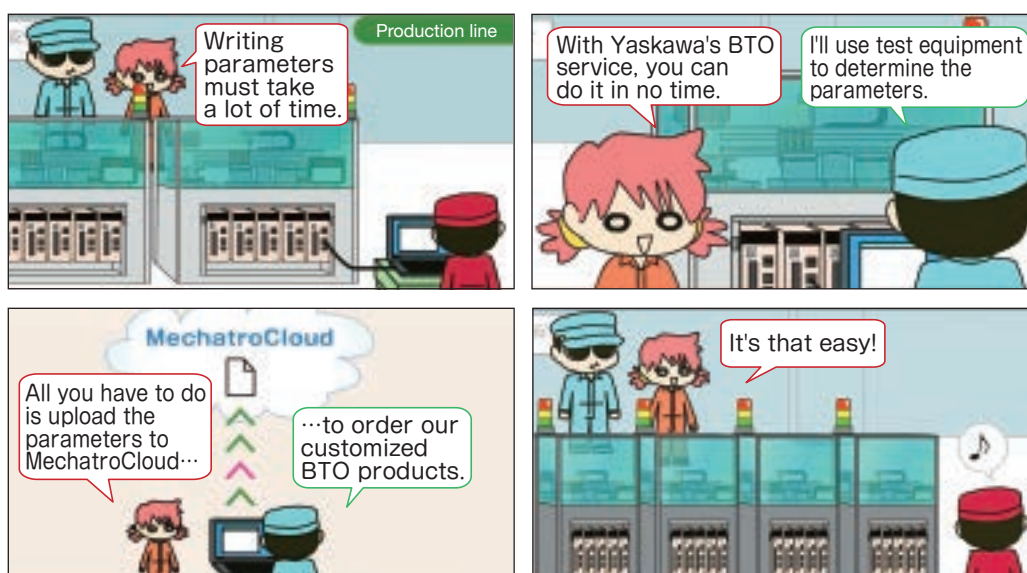

The Σ -7 SERVOPACKs are delivered with the customer-specified parameters already written prior to shipment.

This reduces the man-hours involved in system assembly work.

The names of the axes are printed on the boxes in which the products are delivered. This ensures that these are no mistakes made when installing the axes.

Napping on the Cloud Narumi

BTO Service

How to use Yaskawa's BTO service

- ① Register required information under a corporate membership on the e-mechatronics website.*
 - ② Determine parameters for your equipment.
 - ③ Upload the parameter file to the MechatroCloud website and issue BTO numbers and BTO order numbers.
- Note: Use a parameter file for SigmaWin+ version 5.71 or later versions to upload parameter files.
- ④ Provide the BTO order number to your Yaskawa representative when requesting estimates and placing orders.

*: Corporate member registration for MechatroCloud use

Corporate Members

Corporate Manager

Management Group

The Corporate Manager is in charge of the members that are registered under the company's corporate membership. The first person who registers as a corporate member is the Corporate Manager. There must be at least one Corporate Manager for each corporate membership.

● Corporate Managers are authorized to:

- Add or delete Corporate Managers or Corporate Users.
- Issue or delete BTO numbers.

Corporate User (company employees)

Corporate User group

A person who is added as a corporate member by the Corporate Manager.

● Corporate Users (company employees) are authorized to:

- Issue or delete BTO numbers.

Corporate User (system integrators)

A person who is added as a corporate member by the Corporate Manager.

● Corporate users (system integrators) are authorized to:

- Issue or delete BTO numbers.

Corporate User (sales representatives)

A person who is added as a corporate member by the Corporate Manager.

● Corporate Users (sales representatives) are authorized to:

- Issue or delete BTO numbers.

Register required information under the corporate membership of the e-mechatronics website, the Yaskawa Electric website for product and technical information. For example, information on Yaskawa's BTO service can be shared by members of the same corporate membership by registering persons at the same company and/or persons at related companies under the same corporate membership.

There are two types of corporate membership: Corporate Manager and Corporate User. The member(s) in charge of Corporate Members is called the Corporate Manager. The Corporate Manager is the first person to register as a Corporate Member. Persons who are invited to become Corporate Members under the same corporate membership are called "Corporate Users." A Corporate User can issue BTO numbers.

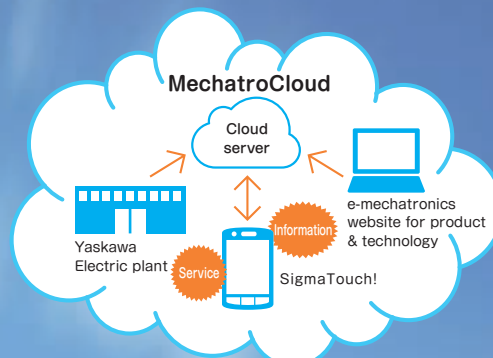

Easy troubleshooting with SigmaTouch!

Anytime, Anywhere

Use
SigmaTouch!
for
free!

Easily search for product information using SigmaTouch!

Users can search for troubleshooting information for a specific model and view product manuals on a smartphone by using a smartphone camera to simply read the QR code of the product.

Innovative service that links users to cloud data!

Yaskawa is striving to incorporate the needs of our customers into our services in a timely manner. With the use of SigmaTouch!, users can quickly and easily access the MechatroCloud server, which contains the latest product information from Yaskawa Electric's plants and maintenance information from the e-mechatronics website. Yaskawa Electric's service will continue to be enhanced to accommodate the needs and expectations of our customers.

Simply read
the QR code!

"SigmaTouch!" is a smartphone application for MechatroCloud. Product information, such as manufacturing information and parameter lists, can be viewed by simply reading the QR codes of Yaskawa Electric's products with a smartphone camera. Alarm details and troubleshooting information can also be viewed on the smartphone, which can greatly reduce recovery time.

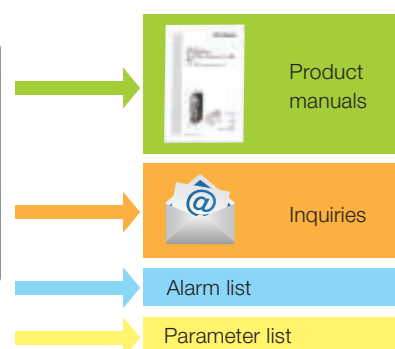

Note: The QR codes can be read with Android OS 4.0.3 or later versions. The Android must be connected to the network to use this service.

QR code

SigmaTouch!

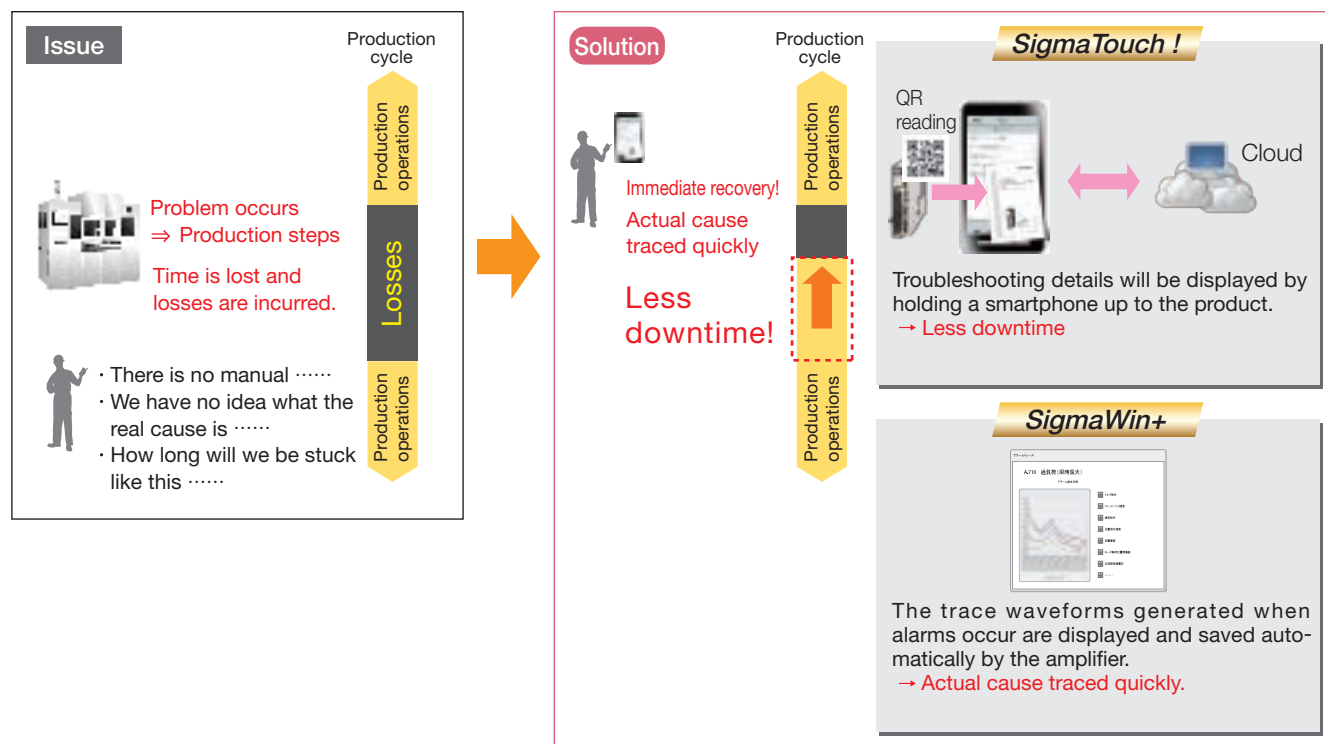

etc.

SigmaTouch!

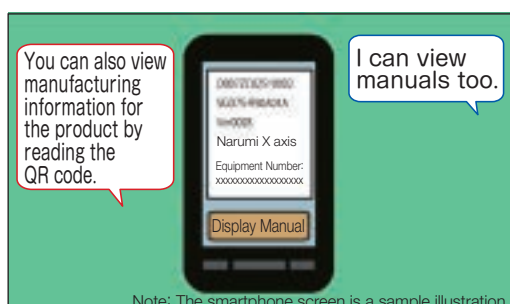

Easier and faster troubleshooting options

Operators can use smartphones on-site to display the SERVOPACKs in the Σ -7 series manual and troubleshooting details. The trace waveforms generated when alarms occur can be saved automatically, and the real causes of problems can be tracked faster, which reduces downtime.

Direct Drive Servomotors

Use a direct drive to supply high torque at low speeds, obtain precise positioning at high speeds without any slippage and backlash, and simplify your machine's configuration and maintenance.

Features	 <p>Coreless, inner rotor Small capacity: SGM7E/SGMCS*1</p> <p>Ideal for applications that require smooth movement without speed fluctuations.</p>	 <p>With core, inner rotor Small capacity: SGM7F/SGMCV*2 Medium capacity: SGM7F/SGMCS*2</p> <p>Ideal for applications that require downsizing and a shorter takt time.</p>	 <p>With core, outer rotor Small and medium capacity: SGM7D</p> <p>Ideal for applications that require high torque, high precision, and high rigidity.</p>
Structures	<p>Inner rotor The inside of the motor rotates.</p>  <ul style="list-style-type: none"> ◎ Built-in 24- and 20-bit encoder. ◎ Low cogging with a core-less system provides smooth operation free from speed variations. <p>*1: The SGM7E is the next-generation series following the SGMCS (Small capacity).</p>	<p>Inner rotor The inside of the motor rotates.</p>  <ul style="list-style-type: none"> ◎ Built-in 24-, 22- and 20-bit encoder. ◎ Compact design with small rotor diameter. ◎ High-speed, high-frequency positioning. ◎ Low inertia. ◎ Low heat generation. <p>*2: The SGM7F is the next-generation series following the SGMCV and SGMCS (Medium capacity).</p>	<p>Outer rotor*3 The outside of the motor rotates.</p>  <p>Compatible with the former Yokogawa Electric DYNASERV Series.</p> <ul style="list-style-type: none"> ◎ Built-in 24-bit encoder. ◎ Application to large loads possible with a high allowable load moment of inertia ratio. ◎ Large center aperture design provides more space available for wiring connections. ◎ High rigidity. <p>*3: A magnetic bias is used that places a strong permanent magnet between the stator and core. Note: Use the motor with a Σ-7S SERVOPACK that has a FT82/FT83 specification.</p>
Applications	<ul style="list-style-type: none"> ◎ Spinning (CMP equipment and washing machines) ◎ Printing rolls 	<ul style="list-style-type: none"> ◎ Indexers ◎ Sorters and bonders 	<ul style="list-style-type: none"> ◎ Rotary tables (Can handle large loads.) ◎ Semiconductor manufacturing equipment ◎ Machine tools 

Features of Direct Drive Servomotor

The load is mounted directly to the motor, so the motor accuracy becomes the equipment accuracy, which contributes greatly to increasing the equipment accuracy. Furthermore, there is no drop in efficiency due to the presence of a reduction gear or other parts, which helps to save energy. The motor's compact size also enables reducing the equipment size, which helps to reduce both the design process time and maintenance costs. The desired operation angle and number of divisions can easily be set, simply by changing the command values.

Typical Servo Drive System

Current limitations :

- Reduced accuracy in positioning with excessive slippage and backlash
- Noise
- Maintenance for wear and tear or for lubrication

Motor with Gear

Motor + Timing Belt

Hollow Motor + Hollow Gear

Direct Drive System

Technical improvements:

- Improved positioning accuracy with direct connection to a load
- Low noise
- Clean room use (No gear means no lubrication.)
- Reduced number of parts
- Easy wiring and piping based on the motor's hollow design

Direct Drive Servomotor

Direct Drive Servomotor (Large center aperture)

Linear Servomotors

Linear Servo Drives contribute to improved machine functionality and performance with exceptional features such as high speed, fast acceleration, long-stroke compatible, constant speed, stability, clean operation, low noise, and low maintenance.

Features

Coreless Model (SGLG)

The lack of magnetic attraction force helps to extend the life of the linear motion guides and minimize operational noise in applications that require high precision with a small force.

Model with F-type Iron Cores (SGLF)

The compact profiles of the FW Linear Motors save installation space. The magnetic attraction between the Moving Coil and Magnetic Way allows the linear motion guides to be highly rigid.

Model with T-type Iron Cores (SGLT)

Yaskawa's unique structure negates the effects of magnetic attraction. This reduces concerns for the structural strength of the linear motion guides and machinery.

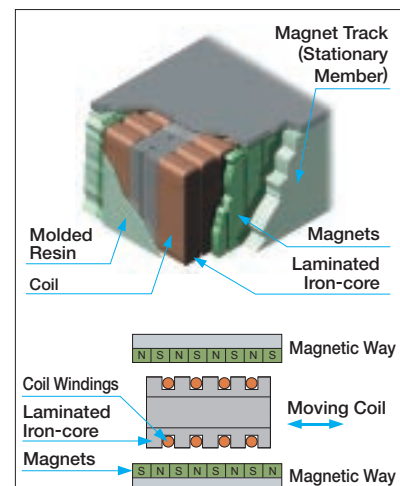

Structures

- The Moving Coil has no core, and is made of accurately molded resin windings
- The Magnetic Way is made of two facing plates with accurately placed magnets secured on the sides.

- The Moving Coil consists of laminated core and pre-wound coil bobbins inserted into slots located in the laminated core and encapsulated in resin.
- The Magnetic Way is made of a row of magnets accurately placed on the core side of the carrier plate.

- The Moving Coil consists of laminated core and pre-wound coil bobbins inserted into slots located in the laminated core and encapsulated in resin.
- The Magnetic Way is made of a row of magnets accurately placed on carrier plates on both sides of the core.

Applications

Multiple heads

Devices used in LCD and OLED manufacturing (dispensers, inspection equipment, repair equipment, etc.)

Linear stages (X, Y, θ)

Devices used in LCD and OLED manufacturing (for G5.5 or larger glass substrates and for long strokes) and semiconductor manufacturing devices (probers, etc.)

Gantries

Devices for electronic parts manufacturing (high-speed chip mounters, etc.)

Benefits of Linear Servomotors

Linear Drive

Benefits 1

- High Speed
- High Precision

Speed	A load is directly driven by the Linear Servomotor without any restrictions on the speed. This easily enables speeds of up to 5 m/s.
Positioning Accuracy	The load is directly driven in a fully-closed loop, enabling submicron positioning control at the sensor resolution.
Stroke	A long stroke can be achieved by coupling Magnetic Ways as required.

Ball Screw Drive

Resonance and heat generation occur at high speeds.

The actual position is likely to deviate from the target position due to torsion and backlash.

A ball screw must be selected according to the stroke length.

Benefits 2

- Fast Acceleration
- Simple Structure

Acceleration Rate	$\text{Acceleration rate} = \frac{\text{Force}}{M+m} \left(\begin{array}{l} M = \text{Load mass} \\ m = \text{Moving Coil mass} \end{array} \right)$
--------------------------	---

The acceleration rate can be increased just by lightening the load.

Heat Generation	Extremely limited heat transfer to the surroundings allows highly accurate positioning.
------------------------	---

Acceleration rate	$\text{Acceleration rate} = \frac{\text{Torque}}{J_L + J_B + J_C + J_M} \left(\begin{array}{l} J_L = \text{Load inertia} \\ J_B = \text{Ball screw inertia} \\ J_C = \text{Coupling inertia} \\ J_M = \text{Motor inertia} \end{array} \right)$
--------------------------	--

Lightening the load does not have much impact on increasing the acceleration rate.

The ball screw expands due to the heat generated at different parts, resulting in inconsistent positioning accuracy.

Extendibility	Multiple Moving Coil can be mounted to one Magnetic Way. ↓ • Simple structure. • Versatile operations can be performed on the same axis.
----------------------	--

Multiple feeding units are required to perform versatile operations on the same axis.

- Increased costs.
- One ball screw can be used for only one operation.

Benefits 3

- Easy Operation

Noise	A table that uses a Linear Servomotor has limited mechanical contact areas and therefore creates minimum operational noise.
Maintenance	A table that uses a Linear Servomotor has limited mechanical contact areas, which greatly reduces the need for maintenance.
Clean Environment	The lack of any rotating parts creates a clean manufacturing environment without grease splattering.

High-speed operation is likely to increase noise.

The many mechanical contact areas require periodic maintenance to be performed for lubrication and wear.

Rotating contact areas cause applied grease to splatter, making it difficult to keep a clean manufacturing environment.

Σ-7-Series SERVOPACKs and Option Modules

SERVOPACKs

MECHATROLINK-4/III/II Communications Reference

◎High-precision motion control

The SERVOPACK when connected to the host controller in the MECHATROLINK-4/III/II network provides not only torque, position, and speed control, but also synchronized phase control that requires advanced control technology. The control mode can be changed online so that the machine can move smoothly in complex motions with great efficiency.

◎Monitors vast amounts of data such as vibration, disturbance, positioning, communication quality, and temperature

Various types of data can be collected without the need to add sensors, enabling real-time detection of deteriorating equipment or changes in the operating environment.

Name	 Σ-7S (Single-axis) MECHATROLINK-4 communications reference	 Σ-7S (Single-axis) Σ-7W (Two-axis) MECHATROLINK-III communications reference	 Σ-7S (Single-axis) MECHATROLINK-II communications reference
Communications protocol	MECHATROLINK-4	MECHATROLINK-III	MECHATROLINK-II
Physical layer	Ethernet	Ethernet	Same as RS-485
Baud rate	100 Mbps	100 Mbps	10 Mbps
Transmission cycle	125 μs to 4 ms	Σ-7S : 125 μs to 4 ms, Σ-7W : 250 μs to 4 ms	250 μs to 4 ms
Number of transmission bytes	16 or 80 bytes/station	32 or 48 bytes/station	17 or 32 bytes/station
Number of slaves	127 max.	62 max.	30 max.
Maximum transmission distance	50 m between stations	75 m between stations	50 m total (100 m with Repeater)
Minimum distance between stations	30 cm	20 cm	50 cm

Analog Voltage/Pulse Train Reference

Analog voltage/
pulse train reference

Analog voltage reference	Speed control	Reference voltage	Max. input voltage	± 12 V (forward speed reference with positive reference)
			Factory setting	6 VDC at rated speed (Input gain setting can be changed.)
	Torque control	Reference voltage	Max. input voltage	± 12 V (forward torque reference with positive reference)
			Factory setting	3 VDC at rated torque (Input gain setting can be changed.)
Pulse train reference	Position control	Reference pulse	Type	Select one: Sign + pulse train, CW + CCW pulse train, or two-phase pulse train with 90° phase differential
			Form	For line driver, open collector
			Max. input pulse frequency*	Line driver Sign + pulse train, CW + CCW pulse train: 4 Mpps Two-phase pulse train with 90° phase differential: 1 Mpps
				Open Collector Sign + pulse train, CW + CCW pulse train: 200 kpps Two-phase pulse train with 90° phase differential: 200 kpps
		Clear signal (Position error clear)		For line driver, open collector

*: If the maximum reference frequency exceeds 1 Mpps, use a shielded cable for I/O signals and ground both ends of the shield. Connect the shield at the SERVOPACK to the connector shell.

INDEXER Module-Mounted Type

Application Examples

Point-to-point positioning
(X-Y Table)

Station positioning (Indexing)
(Rotary Table)

Feeding (Labeling Machine)

Simple

- Interactive methods for everything from adjustment to programming are available with the setup support tool SigmaWin+ for Windows (Ver.5.72 or later).
- Simple connection to the host controller can be established with the I/O module.

Smart

- Special languages are not required, because required operation patterns are easily made by simply setting the data for position and speed in program tables.
- Optimum operation method supports your application.
For positioning, up to 256 steps can be programmed.
〈Operation〉 Program tables, Position and speed tables (station positioning), Registration (positioning by external signals), Serial communication
- Various functions, including external positioning, JOG table operation, homing, and programmable signal outputs are provided.

Speedy

- Reliable high-speed, high-precision positioning when combined with high-performance Σ -7S SERVOPACKs.
- Motion control is accomplished without using motion controllers.

Note: The INDEXER module can be used in combination with the Fully-Closed Module.

Specifications

Function	Specifications
Stations for Program Table Operation	256
JOG Speed Setting	16
ZONE Signal Output	32
Serial Communication	HR: ASCII; max. axes: 16 MEMOBUS: Binary
Homing Methods	3
Equally-dividing and Indexing Positioning (Station Positioning Command)	Rotary machine and tool setting

DeviceNet Module-Mounted Type

- Compliant with the communication specifications of the DeviceNet open field network.
- Maintainability improved by the host controller using DeviceNet to monitor the operating conditions of servo drives, alarm status, and other information.
- Full range of positioning functions featured including simple positioning, homing, continuous speed operation, positioning after continuous speed operation, and programmed operation.
- Round micro-connectors used for the connectors.
- Modules can be driven by two different power-supply methods: servo control power or external power.

Note: The DeviceNet module can be used in combination with the Fully-Closed Module.

Option Modules

Fully-Closed Module

- High-precision and high-response positioning by using feedback from detector (such as an external encoder) installed on the machine.
- High resolution with external encoders (linear scales).

Note: The Fully-Closed Module can be used in combination with the INDEXER module or DeviceNet module.

Safety Module

The Safety Module complies with EN ISO13849-1 (the standards harmonized with EU Machinery Directive 2006/42/EC) and has safety functions equivalent to those stipulated in IEC61800-5-2. By using Σ -7S SERVOPACKs with the safety module, optimum safety designs can be created for mechanical systems to better meet the needs of the industry.

- The first product for AC servo drives in Japan that has safety functions equivalent to the following ones stipulated in the international standard IEC Safe Torque Off (STO), Safe Stop 1 (SS1), Safe Stop 2 (SS2), Safely-Limited Speed (SLS)
- Two safety functions (A and B) are provided and stopping functions can be allocated individually to these safety functions.
- With the attachable Safety Modules for SERVOPACKs, system configurations are simplified and compact.

Σ-7 SERVOPACKs with FT Specifications

Choose the Best SERVOPACK for the Application

The know-how we have acquired in every market has resulted in the creation of a lineup of SERVOPACKs with FT specifications that have added functions to optimally suit a variety of applications.

✓ : Possible — : Not Possible

FT Specifications	Applications	Additional Functions	Features*	Interface		
				A/P	M-II	M-III
FT19	Tracking	Built-in Less Deviation Control	Little delay in motor operations for position references as a result of built-in less deviation control. Ideal for applications that require reference tracking performance (high position accuracy) during movement. [Catalog No. CHEPS80000187]	✓	—	✓
FT21	Machining and Cutting	Feed Shaft Supporting	Improved tracking ability and high-accuracy machining operations with the use of clearance (constant distance) control, predictive control, and quadrant projection compensation functions. [Catalog No. CHEPS80000218]	—	—	✓
FT40	Press and Injection Molding	Pressure Feedback	Highly accurate pressure control with input of pressure sensor signals directly to the SERVOPACK. [Catalog No. CHEPS80000194]	—	—	✓
FT41	Press and Injection Molding	Pressure Feedback	Highly accurate pressure control by feeding back the signals of the pressure sensors directly to the SERVOPACK through the MECHATROLINK-I/O system. [Catalog No. CHEPS80000201]	—	—	✓
FT60	Conveyance	Three-Point Latching	The host controller can detect the orientation of the workpiece or offsets in multiple workpieces based on the information on the three positions input to the SERVOPACK. [Catalog No. CHEPS80000217]	—	—	✓
FT62	Conveyance and Alignment	Triggers at Pre-set Positions and Rotational Coordinate System	Addition of pass-through signals for designated points to enable coordinated operations with the use of trigger signals. Turntables can be easily controlled with innitelength coordinates. [Catalog No. CHEPS80000195]	—	—	✓
FT63	Conveyance	Built-in Semi-Closed/ Fully-Closed Loop Control Online Switching Function	Allows loop control to be switched between semi-closed/fully-closed while online. [Catalog No. CHEPS80000227]	✓	—	✓
FT70	Gantry	Built-in Optimal Gantry Control	Three built-in functions (Position correction table, Synchronized stopping during alarms, and the Position deviation between axes overflow detection) effective for driving gantries. [Catalog No. CHEPS80000229]	—	—	✓
FT77	Conveyance	Built-in Torque/Force Assistance	Multiple SERVOPACKs can be used for applications that require more than one axis to easily build a system which will increase the torque or force up to five times. [Catalog No. CHEPS80000200]	✓	—	✓
FT79	Indexing	Built-in INDEXER	Convenient positioning functions (ZONE signal outputs, job speed table, homing, other) added for high-precision and high-speed positioning without a motion controller. [Catalog No. CHEPS80000188]	✓	—	—
FT82	For Special Motors	SGM7D Motor Drive	SERVOPACKs with high torque, high precision, and a user-friendly design for SGM7D motors. [Catalog No. KAEPS80000123]	✓	✓	✓
FT83	For Special Motors	SGM7D Motor Drive	SERVOPACKs with built-in INDEXER for SGM7D motors. [Catalog No. KAEPS80000123]	✓	—	—

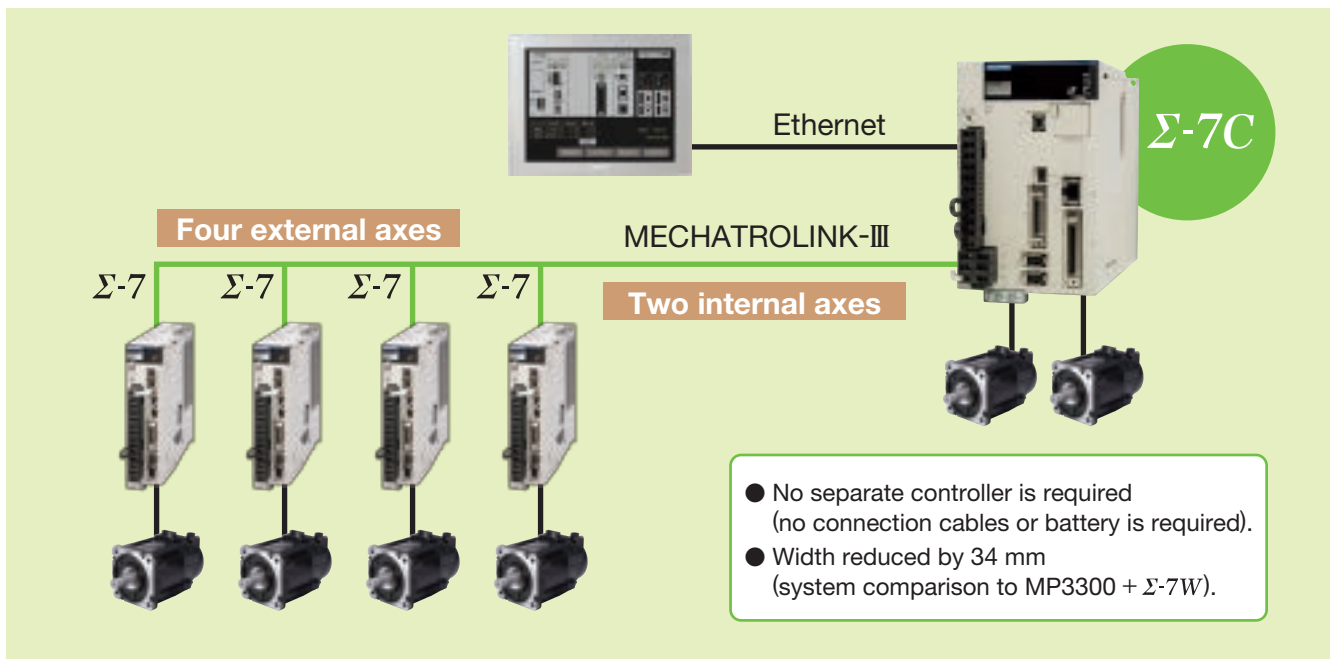

*: Refer to the separate catalogs shown in the table above.

New Two-Axis SERVOPACKs with Built-in Controllers!

Yaskawa's newest two-axis SERVOPACKs with built-in controllers offer the ideal configuration to control small-scale equipment and mechanisms to meet the increasing needs of component downsizing, equipment modularization, and system distribution.

Simple, All-in-One System Configuration

Features

Less system space required

- Configure up to six axes.
- Build small-scale equipment system without PLC using one SERVOPACK.
- Expand functionality by mounting an Option Base Unit.

Equipment modularization and distributed control system

- Reduce burden of designing software when part of the equipment changes.

High-Speed Response

- High-speed response frequency of 3.1 kHz has been achieved.
- High-speed I/O used for the Controller Function Module.
- The command/response delay is minimized with the two internal axes. These axes can be synchronized with the external axes.

Easier Maintenance

- No battery is required for the Controller Function Module, which reduces the time and cost of periodic replacement.
- Protective functions have been improved for outputs to the Controller Function Module.

*: Excluding the following Optional Modules:
SVA-01, SVB-01, SVC-01, PO-01, MPU-01,
215AIF-01, and EXIOIF.

Servomotors

Rotary Servomotors

	Low inertia		Medium inertia			Earlier model with Low inertia
						
Model	SGM7M	SGM7A	SGM7J	SGM7P	SGM7G	SGMMV
Rated Output	3.3 W – 33 W	50 W – 7 kW	50 W – 750 W	100 W – 1.5 kW	300 W – 15 kW	10 W – 30 W

Direct Drive Servomotors

	With core, outer rotor	With core, inner rotor		Coreless, inner rotor
				
Model	SGM7D	SGM7F/SGMCV (Small Capacity)	SGM7F/SGMCS (Medium capacity)	SGM7E/SGMCS (Small Capacity)
Rated Torque	1.30 N·m – 240 N·m	2.00 N·m – 35.0 N·m	45.0 N·m – 200 N·m	2.00 N·m – 35.0 N·m

Linear Servomotors

	Coreless model	Model with iron core		Earlier model with iron core
				
Model	SGLG	SGLFW2	SGLT	SGLFW
Rated Force	12.5 N – 750 N	45 N – 1680 N	130 N – 900 N	25 N – 1120 N

SERVOPACKs

*1: You cannot use a Fully-Closed Module and a Safety Module together.

*2: Driven by control power supply

*3: Driven by external power supply

System Configuration Example

Combination of Σ -7S SERVOPACK and Rotary Servomotor/Direct Drive Servomotor

● For MECHATROLINK-III Communications

Three-phase 200 VAC

Combination of Σ -7S SERVOPACK and Linear Servomotor

● For MECHATROLINK-III Communications

Three-phase 200 VAC

Power supply
Three-phase 200 VAC

Molded-case circuit breaker (MCCB)

Protects the power supply line by shutting the circuit OFF when overcurrent is detected.

Noise Filter

Used to eliminate external noise from the power line.

Magnetic Contactor

Turns the servo ON and OFF. Install a surge absorber.

Σ -7S Single-axis MECHATROLINK-III Communications Reference SERVOPACK

System Configuration Example

Combination of Σ -7S SERVOPACK and Rotary Servomotor/Direct Drive Servomotor

- For MECHATROLINK-III Communications
- Three-phase 200 VAC

- *1: This example is for a SERVOPACK with a three-phase, 200-VAC power supply input. The pin layout of the main circuit connector depends on the voltage.
- *2: External Regenerative Resistors are not provided by Yaskawa.
- *3: The power supply for the holding brake is not provided by Yaskawa. Select a power supply based on the holding brake specifications.
If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.
- *4: If you use a Servomotor with a batteryless absolute encoder, the Battery Case is not required.

Combination of Σ -7S SERVOPACK and Linear Servomotor

● For MECHATROLINK-III Communications Three-phase 200 VAC

*1: This example is for a SERVOPACK with a three-phase, 200-VAC power supply input. The pin layout of the main circuit connector depends on the voltage.

*2: External Regenerative Resistors are not provided by Yaskawa.

*3: Only required when using an incremental linear encoder (manufactured by Dr. JOHANNES HEIDENHAIN GmbH and Renishaw plc).

System Configuration Example

Combination of Σ -7W SERVOPACK and Rotary Servomotor/Direct Drive Servomotor

- For MECHATROLINK-III Communications
Three-phase 200 VAC

- *1: If you use a Servomotor with a batteryless absolute encoder, the Battery Case is not required.
- *2: The SGM7D model cannot be used in combination with the Σ -7W SERVOPACK.

Combination of Σ -7W SERVOPACK and Linear Servomotor

● For MECHATROLINK-III Communications

Three-phase 200 VAC

Power supply
Three-phase 200 VAC

Molded-case circuit breaker (MCCB)

Protects the power supply line by shutting the circuit OFF when overcurrent is detected.

Noise Filter

Used to eliminate external noise from the power line.

- *1: You must also use a Yaskawa Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the Serial Converter Unit.
- *2: The multiplier (number of divisions) depends on the Linear Encoder. Also, you must write the motor constant file to the Linear Encoder in advance.
- *3: The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a Yaskawa SERVOPACK. The actual speed will be restricted by either the maximum speed of the Linear Servomotor or the maximum speed of the Linear Encoder (given above).
- *4: If you use the origin signals with a Linear Encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

- *5: Use this model number to purchase the Serial Converter Unit.
- *6: Use this model number to purchase the Sensor Head with Interpolator.
- *7: Use this model number to purchase the Interpolator.
- *8: Contact your Yaskawa representative.
- Note: 1. Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the Encoder before you use it.
2. Σ-LINK is a registered trademark of YASKAWA ELECTRIC CORPORATION.

◆ Absolute Rotary Encoder

The following Absolute Rotary Encoders are for fully-closed control. Can not use it to control the motor.

- *1: You can use these models with either a single-phase or three-phase power supply input.
 *2: If you use the SGD7W-5R5A with a single-phase 200-VAC power supply input, derate the load ratio to 65%. An example is given below.
 If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65% ((90% + 40%)/2 = 65%).
 *3: The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.
 *4: Refer to the following manual for details.
 □ □ Σ-7 Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual (Manual No.: SIEP S800001 73)
 *5: Refer to the following manual for details.
 □ □ Σ-7 Series AC Servo Drive Σ-7W/Σ-7C SERVOPACK with Hardware Option Specifications HWBB Function Product Manual (Manual No.: SIEP S800001 72)
 *6: The BTO specification indicates if the SERVOPACK is customized by using the MechatroCloud BTO service. This service is available in Japan only.
 You need a BTO number to order SERVOPACKs with customized specifications. Refer to page M-15 for the details on the BTO service.

Rotary Servomotors

■ Features

SGM7M (Low Inertia, Ultra Small Size) 4

- Contributes to machine downsizing (flange size: 15 mm × 15 mm/25 mm × 25 mm).
- Ultra small capacity: 3.3 W to 33 W and maximum motor speed: 7,000 min⁻¹
- Mounted absolute serial encoder: 20 bits. Can be used as an incremental encoder.

SGM7J (Medium Inertia, High Speed) 18

- Instantaneous peak torque: 350% of rated torque.
- Protective structure: IP67
- Mounted high-resolution serial encoder: 24 bits. Batteryless absolute encoder also provided.
- Full lineup (50 W to 750 W, with holding brake, with gears, and with oil seal).
- Cables can be installed in both load side and non-load side.

SGM7A (Low Inertia, High Speed) 42

- Instantaneous peak torque: 350% of rated torque (for motors of less than 1 kW).
- Protective structure: IP67 (IP22 for 7.0 kW motor)
- Mounted high-resolution serial encoder: 24 bits. Batteryless absolute encoder also provided.
- Full lineup (50 W to 7.0 kW, with holding brake, with gears, and with oil seal).
- Cables can be installed in both load side and non-load side (for motors of less than 1 kW).

SGM7P (Medium Inertia, Flat Type) 78

- Flat type with short depth.
- Mounted high-resolution serial encoder: 24 bits. Batteryless absolute encoder also provided.
- Full lineup (100 W to 1.5 kW, with holding brake, with gears, and with oil seal).

SGM7G (Medium Inertia, Large Torque) 98

- Protective structure: IP67
- Mounted high-resolution serial encoder: 24 bits. Batteryless absolute encoder also provided.
- Full lineup (300 W to 15 kW, with holding brake, and with oil seal).

5th digit Design Revision Order

A

*1. This specification must be used with SGD V SERVOPACKs (Σ-V Series).

*2. Specifications are the same for 24 VDC and 48 VDC. Characteristics vary with the voltage of the main circuit for SERVOPACKs.

*3. Applicable only for SGM7M-A1/-A2/-A3

Specifications and Ratings

Specifications

Voltage		24 VDC/48 VDC						200 VAC		
Model SGM7M-		B3E	B5E	B9E	A1E	A2E	A3E	A1A	A2A	A3A
Time Rating		Continuous								
Thermal Class		UL: A, CE: B			B					
Insulation Resistance		500 VDC, 10 MΩ min.								
Withstand Voltage		600 VAC for 1 minute						1,500 VAC for 1 minute		
Excitation		Permanent magnet								
Mounting		Flange-mounted								
Drive Method		Direct drive								
Rotation Direction		Counterclockwise (CCW) for forward reference when viewed from the load side								
Vibration Class*1		V15								
Environmental Conditions	Surrounding Air Temperature	0°C to 40°C								
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)								
	Installation Site	<ul style="list-style-type: none">• Must be indoors and free of corrosive and explosive gases.• Must be well-ventilated and free of dust and moisture.• Must facilitate inspection and cleaning.• Must have an altitude of 1,000 m or less.• Must be free of strong magnetic fields.								
	Storage Environment	Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)								
Shock Resistance*2	Impact Acceleration Rate at Flange	490 m/s ²								
	Number of Impacts	2 times								
Vibration Resistance*2	Vibration Acceleration Rate at Flange	49 m/s ²								
Applicable SERVOPACKs	SGDV- *3	1R7E			2R9E			—	—	—
	SGD7S-	—	—	—	—	—	—	R90A, R90F		1R6A, 2R1F
	SGD7W-	—	—	—	—	—	—	1R6A*4, 2R8A*4		1R6A, 2R8A*4

*1. A vibration class of V15 indicates a vibration amplitude of 15 μ m maximum on the Servomotor without a load at the rated motor speed.

*2. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

Shock Applied to the Servomotor

Vibration Applied to the Servomotor

*3. These are Σ -V-series SERVOPACKs.

Refer to the following section for details.

 Σ -V SERVOPACKs with DC Power Input (page 514)

*4. If you use a Servomotor together with a Σ -7W or Σ -7C SERVOPACK, the control gain may not increase as much as with a Σ -7S SERVOPACK and other performances may be lower than those achieved with a Σ -7S SERVOPACK.

Servomotor Ratings

Voltage			24 VDC/48 VDC					
Model SGM7M			B3E	B5E	B9E	A1E	A2E	A3E

Holding Brake Specifications* ⁵	Rated Voltage	V	—	—	—	24 VDC ^{+10%₀}		
	Capacity	W	—	—	—	2.1	2.8	3.2
	Holding Torque	N·m	—	—	—	0.044	0.077	0.116
	Coil Resistance	Ω (at 20°C)	—	—	—	274.3	205.7	180
	Rated Current	A (at 20°C)	—	—	—	0.087	0.133	0.117
	Time Required to Release Brake	ms	—	—	—	60	60	60
	Time Required to Brake	ms	—	—	—	100	100	100
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)* ⁶			30 times					
Allowable Shaft Loads* ⁷	With External Regenerative Resistor		30 times					
	LF	mm	10			16		
	Allowable Radial Load	N	8		10	34	44	
	Allowable Thrust Load	N	4			14.5		

Note: The values in parentheses are for Servomotors with Holding Brakes.

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum or steel heat sink of the dimensions given in the table.

*3. Refer to the following section for the relation between the heat sinks and derating rate.

 **Servomotor Heat Dissipation Conditions (page 11)**

*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

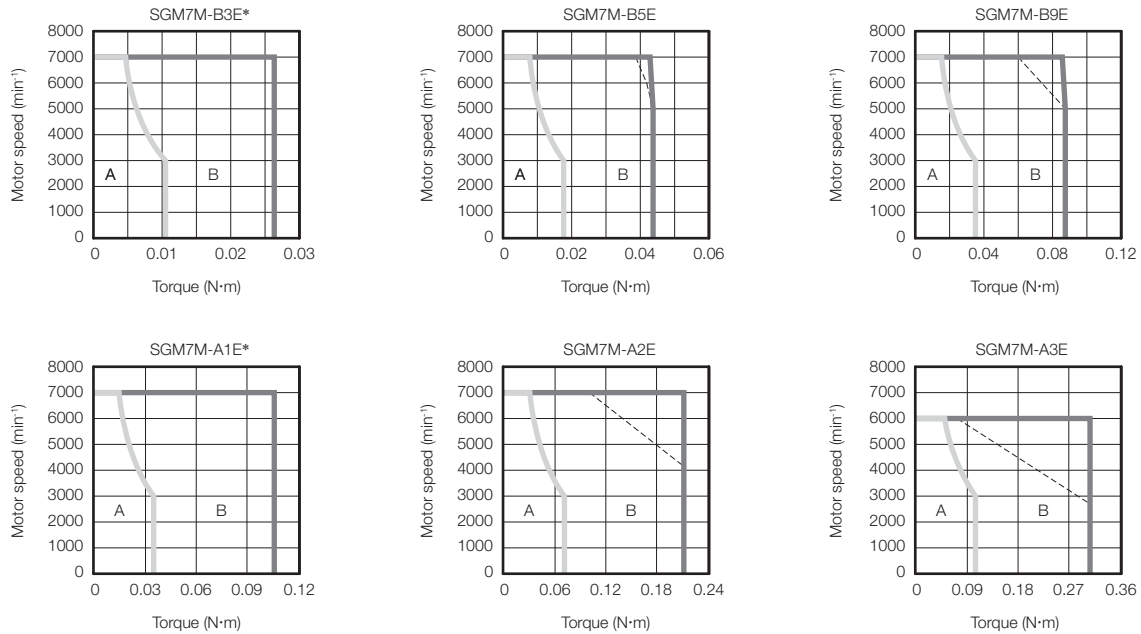

*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

*7. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

Torque-Motor Speed Characteristics

A : Continuous duty zone (solid lines): With 48 VDC input
B : Intermittent duty zone (dotted lines): With 24 VDC input

* The characteristics are the same for 24 VDC and 48 VDC input.

Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.

2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Torque-Motor Speed Characteristics* (page 7).

 **Servomotor Heat Dissipation Conditions (page 11)**

*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

*7. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

Torque-Motor Speed Characteristics

- [A] : Continuous duty zone
[B] : Intermittent duty zone*

* The characteristics are the same for three-phase 200 V, single-phase 200 V, and single-phase 100 V input.

Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.

2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Torque-Motor Speed Characteristics* (page 9).

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Servomotor Ratings* (page 6 and 8). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVOPACKs.
Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-R90A, -1R6A, -R90F, and -2R1F

◆ When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

External Regenerative Resistors (page 506)

Derating Rates

◆ Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

Important

The actual temperature rise depends on the following conditions. Always check the Servomotor temperature with the actual equipment.

- How the heat sink (the Servomotor mounting section) is attached to the installation surface
- Status between heat sink and Servomotor (sealant, reduction gear, etc.)
- What material is used for the Servomotor mounting section
- Servomotor speed

Information

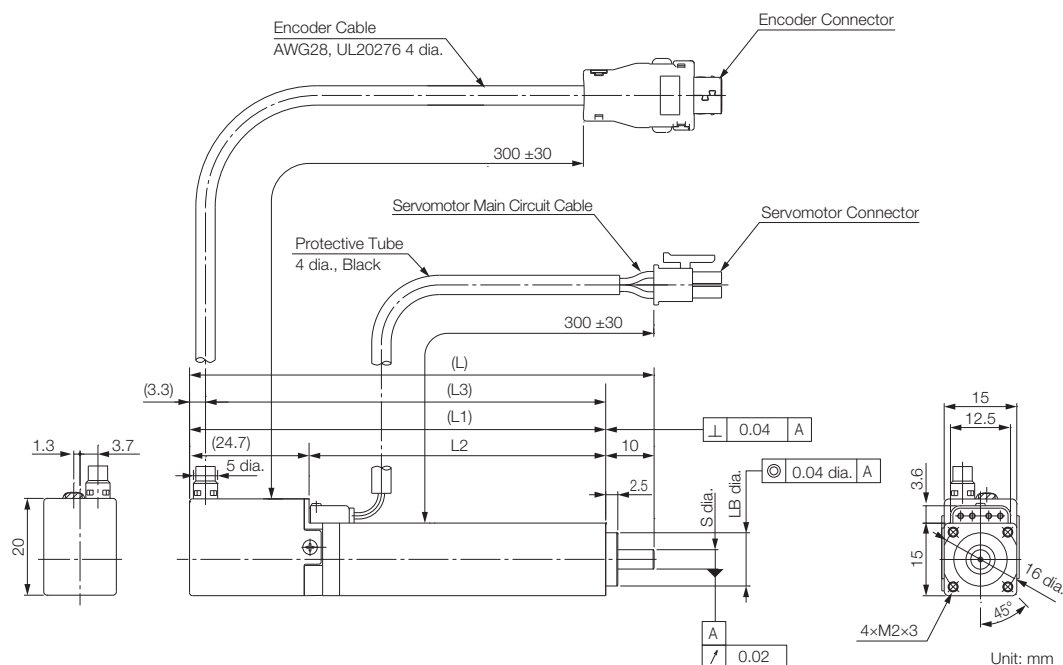

When using Servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in *Servomotor Overload Protection Characteristics* (page 7 and 9).

Note: The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

Selecting Cables

◆ Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

* When using a cable tie for Servomotor-end Cables, make sure that there is enough space between the cable tie and the connector. If the distance between the cable tie and the connector is too close, a connection failure of the connector pins may occur.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: S1EP S800001 32)

◆ Servomotor Main Circuit Cables

Time Rating		Continuous						
Thermal Class		UL: B, CE: B						
Insulation Resistance		500 VDC, 10 MΩ min.						
Withstand Voltage		1,500 VAC for 1 minute						
Excitation		Permanent magnet						
Mounting		Flange-mounted						
Drive Method		Direct drive						
Rotation Direction		Counterclockwise (CCW) for forward reference when viewed from the load side						
Vibration Class*1		V15						
Environmental Conditions	Surrounding Air Temperature	0°C to 40°C (With derating, usage is possible between 40°C and 60°C.)*3						
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)						
	Installation Site	<ul style="list-style-type: none">• Must be indoors and free of corrosive and explosive gases.• Must be well-ventilated and free of dust and moisture.• Must facilitate inspection and cleaning.• Must have an altitude of 1,000 m or less. (With derating, usage is possible between 1,000 m and 2,000 m.)*3• Must be free of strong magnetic fields.						
	Storage Environment	Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)						
Shock Resistance*2	Impact Acceleration Rate at Flange	490 m/s ²						
	Number of Impacts	2 times						
Vibration Resistance*2	Vibration Acceleration Rate at Flange	49 m/s ²						
Applicable SERVO-PACKs	SGD7S-	R70A, R70F	R90A, R90F	1R6A, 2R1F		2R8A, 2R8F	5R5A	
	SGD7W-SGD7C-	1R6A*4, 2R8A*4		1R6A, 2R8A*4		2R8A, 5R5A*4, 7R6A*4	5R5A, 7R6A	

*1. A vibration class of V15 indicates a vibration amplitude of 15 μ m maximum on the Servomotor without a load at the rated motor speed.

*2. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

*3. Refer to the following section for the derating rates.

 **Derating Rates (page 26)**

*4. If you use a Servomotor together with a Σ -7W or Σ -7C SERVOPACK, the control gain may not increase as much as with a Σ -7S SERVOPACK and other performances may be lower than those achieved with a Σ -7S SERVOPACK.

Allowable Shaft Loads* ³	LF	mm	20			25			35
	Allowable Radial Load	N	78			245			392
	Allowable Thrust Load	N	54			74			147

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.

*3. Refer to the following section for the relation between the heat sinks and derating rate.

 **Servomotor Heat Dissipation Conditions (page 26)**

*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

*7. To externally connect a dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect a dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

*8. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

Torque-Motor Speed Characteristics

- A** : Continuous duty zone
B : Intermittent duty zone
- (solid lines): With three-phase 200-V or single-phase 230-V input
 (dotted lines): With single-phase 200-V input
 (dashed-dotted lines): With single-phase 100-V input

*1. The characteristics are the same for single-phase 200 V and single-phase 100 V input.

*2. The characteristics are the same for three-phase 200 V and single-phase 200 V input.

Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.

- The characteristics in the intermittent duty zone depend on the power supply voltage.
- If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

08A□AHC□						1/21	42.1/84	163	143	286
08A□AH7□						1/33	69.3/88	259	91	182

*1. The gear output torque is expressed by the following formula.

$$\text{Gear output torque} = \text{Servomotor output torque} \times \frac{1}{\text{Gear ratio}} \times \text{Efficiency}$$

The gear efficiency depends on operating conditions such as the output torque, motor speed, and temperature. The values in the table are typical values for the rated torque, rated motor speed, and a surrounding air temperature of 25°C. They are reference values only.

*2. When using an SGM7J-A5A, SGM7J-01A, or SGM7J-C2A Servomotor with a gear ratio of 1/5 or an SGM7J-C2A Servomotor with a gear ratio of 1/11, maintain an 85% maximum effective load ratio. For an SGM7J-C2A Servomotor with a gear ratio of 1/21 or 1/33, maintain a 90% maximum effective load ratio. The values in the table take the effective load ratio into consideration.

*3. The instantaneous maximum torque is 300% of the rated torque.

Note: 1. The gears that are mounted to Yaskawa Servomotors have not been broken in.

Break in the Servomotor if necessary. First, operate the Servomotor at low speed with no load. If no problems occur, gradually increase the speed and load.

2. The no-load torque for a Servomotor with a Gear is high immediately after the Servomotor starts, and it then decreases and becomes stable after a few minutes.

This is a common phenomenon caused by grease circulation in the gears and it does not indicate faulty gears.

3. Other specifications are the same as those for Servomotors without Gears.

Important

The SERVOPACK speed control range is 1:5,000. If you use Servomotors at extremely low speeds (0.02 min⁻¹ or lower at the gear output shaft), if you use Servomotors with a one-pulse feed reference for extended periods, or under some other operating conditions, the gear bearing lubrication may be insufficient. That may cause deterioration of the bearing or increase the load ratio. Contact your Yaskawa representative if you use a Servomotor under these conditions.

* The moment of inertia for the Servomotor and gear is the value without a holding brake. You can calculate the moment of inertia for a Servomotor with a Gear and Holding Brake with the following formula.

Motor moment of inertia for a Servomotor with a Holding Brake from *Ratings of Servomotors without Gears* (page 20) + Moment of inertia for the gear from the above table.

Important

During operation, the gear generates the loss at the gear mechanism and oil seal. The loss depends on the torque and motor speed conditions. The temperature rise depends on the loss and heat dissipation conditions. For the heat dissipation conditions, always refer to the following table and check the gear and motor temperatures with the actual equipment. If the temperature is too high, implement the following measures.

- Decrease the load ratio.
- Change the heat dissipation conditions.
- Use forced-air cooling for the motor with a cooling fan or other means.

Model	Heat Sink Size			
	1/5	1/9 or 1/11	1/21	1/33
SGM7J-A5	A			
SGM7J-01				
SGM7J-C2	B			
SGM7J-02				
SGM7J-04	C			
SGM7J-06				
SGM7J-08				

- A: 250 mm × 250 mm × 6 mm, aluminum plate
- B: 300 mm × 300 mm × 12 mm, aluminum plate
- C: 350 mm × 350 mm × 12 mm, aluminum plate

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Torque-Motor Speed Characteristics* on page 21.

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Ratings of Servomotors without Gears* (page 20). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

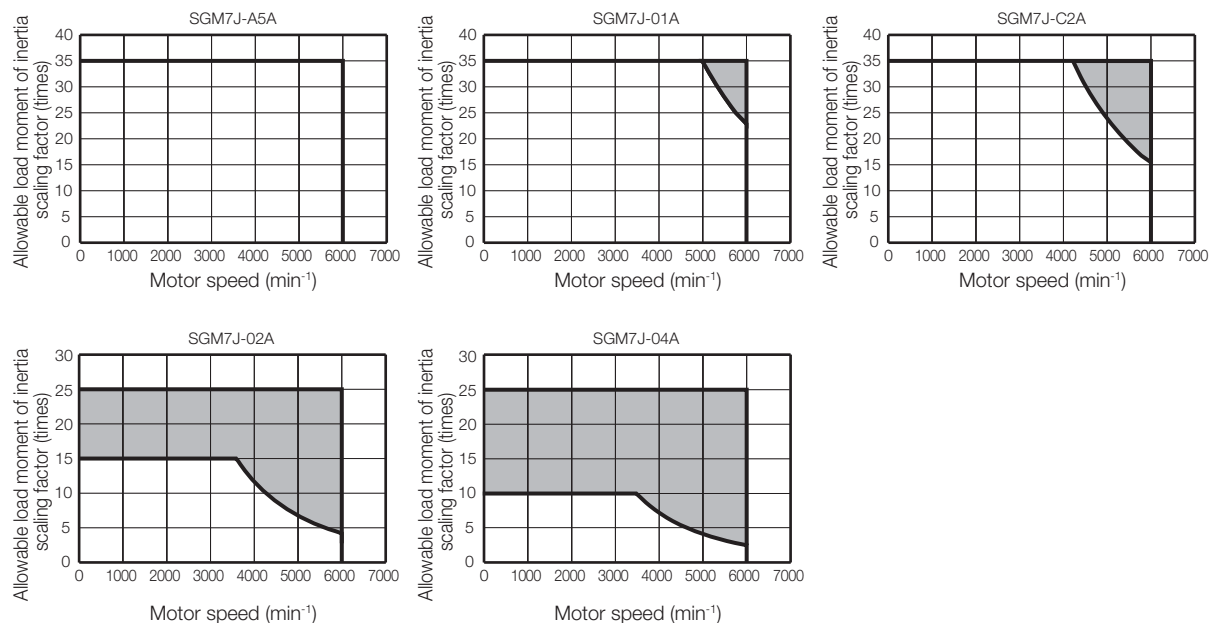

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVO-PACKs.
Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

◆ When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

External Regenerative Resistors (page 506)

Derating Rates

◆ Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

Important

The actual temperature rise depends on the following conditions. Always check the Servomotor temperature with the actual equipment.

- How the heat sink (the Servomotor mounting section) is attached to the installation surface
- Status between heat sink and Servomotor (sealant, reduction gear, etc.)
- What material is used for the Servomotor mounting section
- Servomotor speed

◆ Applications Where the Surrounding Air Temperature Exceeds 40°C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

◆ Applications Where the Altitude Exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Information

When using Servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in *Servomotor Overload Protection Characteristics* (page 24).

Note: 1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.

2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

* For models that have a batteryless absolute encoder, L and LL are 8 mm greater than the given value. Refer to the following section for the values for individual models.

🔧 **Dimensions of Servomotors with Batteryless Absolute Encoders (page 36)**

Note: 1. The values in parentheses are for Servomotors with Holding Brakes.

2. Gear dimensions are different from those of the Σ, Σ-II, and Σ-III Series.

3. The values for the shaft end are for a straight shaft with key and tap. If a key and tap are not necessary, specify shaft end code 2 for the 8th digit.

Selecting Cables

◆ Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

Encoder Cable of 20 m or Less

Encoder Cable of 30 m to 50 m (Relay Cable)

Note: 1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.

2. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-speed characteristics will become smaller because the voltage drop increases.

3. Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

☞ *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: S1EP S800001 32)

Important

There are different order numbers for the Servomotor Main Circuit Cables and Encoder Cables depending on the cable installation direction. Confirm the order numbers before you order.

4th digit Serial Encoder

Code	Specification
6	24-bit batteryless absolute
7	24-bit absolute
F	24-bit incremental

Note: Contact your Yaskawa representative for models of 1.5 kW or higher.

5th digit Design Revision Order

A

6th digit Gear Type

Code	Specification
H	HDS planetary low-backlash gear

7th digit Gear Ratio

Code	Specification
B	1/11 ^{*1}
C	1/21
1	1/5
2	1/9 ^{*2}
7	1/33

*1. This specification is not supported for models with a rated output of 50 W.

*2. This specification is supported only for models with a rated output of 50 W.

8th digit Shaft End

Code	Specification
0	Flange output
2	Straight without key
6	Straight with key and tap

9th digit Options

Code	Specification
1	Without options
C	With holding brake (24 VDC)

Specifications and Ratings

Specifications

Voltage		200 V										
Model SGM7A-		A5A	01A	C2A, 02A	04A	06A, 08A	10A	15A	20A	25A, 30A	40A, 50A	70A
Time Rating		Continuous										
Thermal Class		UL: B, CE: B						UL: F, CE: F				
Insulation Resistance		500 VDC, 10 MΩ min.										
Withstand Voltage		1,500 VAC for 1 minute										
Excitation		Permanent magnet										
Mounting		Flange-mounted										
Drive Method		Direct drive										
Rotation Direction		Counterclockwise (CCW) for forward reference when viewed from the load side										
Vibration Class*1		V15										
Environmental Conditions	Surrounding Air Temperature	0°C to 40°C (With derating, usage is possible between 40°C and 60°C.)*3										
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)										
	Installation Site	<ul style="list-style-type: none">• Must be indoors and free of corrosive and explosive gases.• Must be well-ventilated and free of dust and moisture.• Must facilitate inspection and cleaning.• Must have an altitude of 1,000 m or less. (With derating, usage is possible between 1,000 m and 2,000 m.)*3• Must be free of strong magnetic fields.										
	Storage Environment	Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)										
Shock Resistance*2	Impact Acceleration Rate at Flange	490 m/s ²										
	Number of Impacts	2 times										
Vibration Resistance*2	Vibration Acceleration Rate at Flange	49 m/s ² (Models 15A to 50A: 24.5 m/s ² front to back)										14.7 m/s ²
Applicable SERVOPACKs	SGD7S-	R70A, R70F	R90A, R90F	1R6A, 2R1F	2R8A, 2R8F	5R5A	120A	180A	200A	330A	550A	
	SGD7W-SGD7C-	1R6A*4, 2R8A*4		1R6A, 2R8A*4	2R8A, 5R5A*4, 7R6A*4	5R5A, 7R6A	—					

*1. A vibration class of V15 indicates a vibration amplitude of 15 μ m maximum on the Servomotor without a load at the rated motor speed.

*2. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

Shock Applied to the Servomotor

Vibration Applied to the Servomotor

*3. Refer to the following section for the derating rates.

 **Derating Rates (page 52)**

*4. If you use a Servomotor together with a Σ -7W or Σ -7C SERVOPACK, the control gain may not increase as much as with a Σ -7S SERVOPACK and other performances may be lower than those achieved with a Σ -7S SERVOPACK.

Ratings of Servomotors without Gears

	Coil Resistance	Ω (at 20°C)	104.8±10%			96±10%		88.6±10%		
	Rated Current	A (at 20°C)	0.23			0.25		0.27		
	Time Required to Release Brake	ms	60					80		
	Time Required to Brake	ms	100							
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)* ⁶			40 times			30 times	20 times		20 times	
Allowable Shaft Loads* ⁸	With External Regenerative Resistor and External Dynamic Brake Resistor* ⁷		40 times			30 times	20 times		30 times	
	LF	mm	20			25		35		
	Allowable Radial Load		78			245		392		
	Allowable Thrust Load		54			74		147		

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.

*3. Refer to the following section for the relation between the heat sinks and derating rate.

 **Servomotor Heat Dissipation Conditions (page 52)**

*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

*7. To externally connect a dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect a dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

*8. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

*9. If the heat sink is 250 mm × 250 mm × 6 mm, the rated output is 550 W and the rated torque is 1.75 N·m. Refer to the following section for details.

 **Servomotor Heat Dissipation Conditions (page 52)**

Torque-Motor Speed Characteristics

A : Continuous duty zone — (solid lines): With three-phase 200-V or single-phase 230-V input
B : Intermittent duty zone - - - (dotted lines): With single-phase 200-V input
 - · - (dashed-dotted lines): With single-phase 100-V input

*1. The characteristics are the same for single-phase 200 V and single-phase 100 V input.

*2. A single-phase power input can be used in combination with the SGD7S-120A□□A008.

Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.

2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Ratings of Servomotors without Gears

*1. The gear output torque is expressed by the following formula.

$$\text{Gear output torque} = \text{Servomotor output torque} \times \frac{1}{\text{Gear ratio}} \times \text{Efficiency}$$

The gear efficiency depends on operating conditions such as the output torque, motor speed, and temperature. The values in the table are typical values for the rated torque, rated motor speed, and a surrounding air temperature of 25°C. They are reference values only.

*2. When using an SGM7A-A5A, SGM7A-01A, or SGM7A-C2A Servomotor with a gear ratio of 1/5 or an SGM7A-C2A Servomotor with a gear ratio of 1/11, maintain an 85% maximum effective load ratio. For an SGM7A-C2A Servomotor with a gear ratio of 1/21 or 1/33, maintain a 90% maximum effective load ratio. The values in the table take the effective load ratio into consideration.

*3. The instantaneous maximum torque is 300% of the rated torque.

Note: 1. The gears that are mounted to Yaskawa Servomotors have not been broken in.

Break in the Servomotor if necessary. First, operate the Servomotor at low speed with no load. If no problems occur, gradually increase the speed and load.

2. The no-load torque for a Servomotor with a Gear is high immediately after the Servomotor starts, and it then decreases and becomes stable after a few minutes. This is a common phenomenon caused by grease circulation in the gears and it does not indicate faulty gears.

3. Contact your Yaskawa representative for information on Servomotor with Gears with a rated output of 1.5 kW or higher.

4. Other specifications are the same as those for Servomotors without Gears.

Important

The SERVOPACK speed control range is 1:5,000. If you use Servomotors at extremely low speeds (0.02 min⁻¹ or lower at the gear output shaft), if you use Servomotors with a one-pulse feed reference for extended periods, or under some other operating conditions, the gear bearing lubrication may be insufficient. That may cause deterioration of the bearing or increase the load ratio. Contact your Yaskawa representative if you use a Servomotor under these conditions.

* The moment of inertia for the Servomotor and gear is the value without a holding brake. You can calculate the moment of inertia for a Servomotor with a Gear and Holding Brake with the following formula.

Motor moment of inertia for a Servomotor with a Holding Brake from *Ratings of Servomotors without Gears* (page 44) + Moment of inertia for the gear from the above table.

Important

During operation, the gear generates the loss at the gear mechanism and oil seal. The loss depends on the torque and motor speed conditions. The temperature rise depends on the loss and heat dissipation conditions. For the heat dissipation conditions, always refer to the following table and check the gear and motor temperatures with the actual equipment. If the temperature is too high, implement the following measures.

- Decrease the load ratio.
- Change the heat dissipation conditions.
- Use forced-air cooling for the motor with a cooling fan or other means.

Model	Heat Sink Size			
	1/5	1/9 or 1/11	1/21	1/33
SGM7A-A5	A			
SGM7A-01				
SGM7A-C2	B			
SGM7A-02				
SGM7A-04	C			
SGM7A-06				
SGM7A-08				
SGM7A-10A				

- A: 250 mm × 250 mm × 6 mm, aluminum plate
- B: 300 mm × 300 mm × 12 mm, aluminum plate
- C: 350 mm × 350 mm × 12 mm, aluminum plate

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Torque-Motor Speed Characteristics* on page 45 or page 47.

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Ratings of Servomotors without Gears* (pages 44 and 46). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

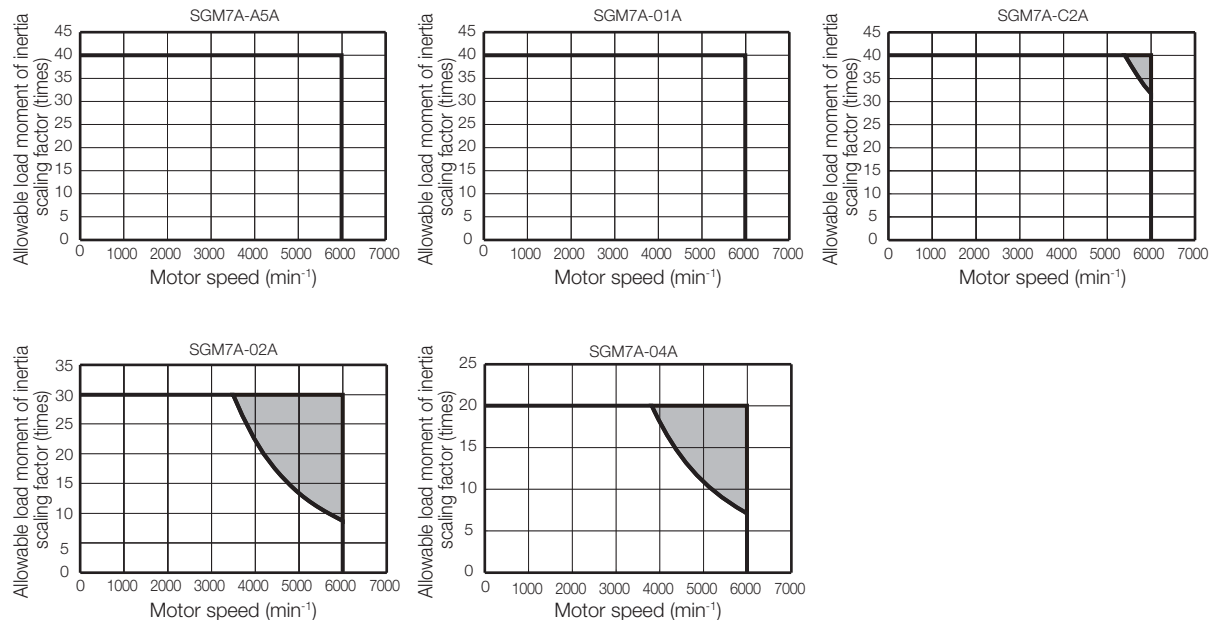

Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVO-PACKs.

Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

◆ When an External Regenerative Resistor Is Required

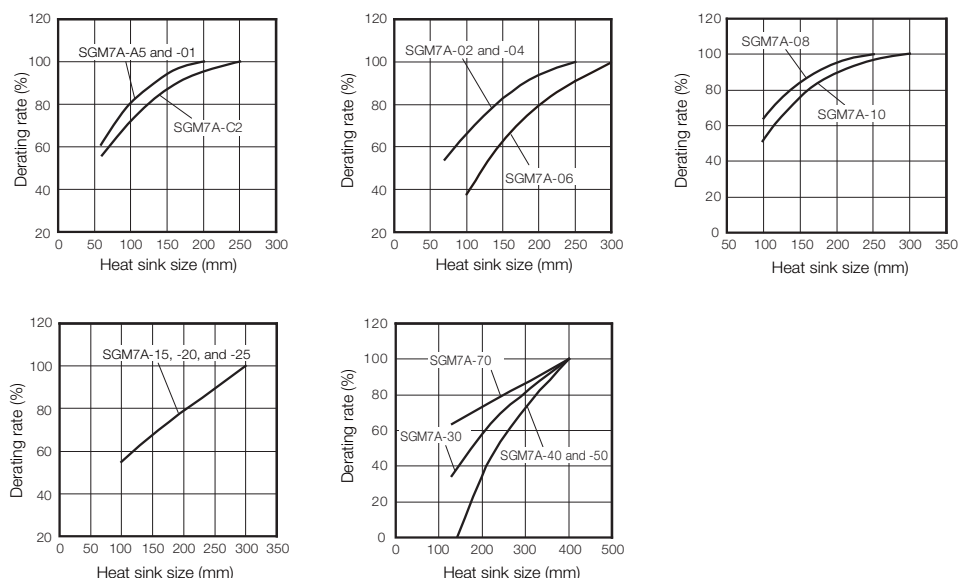

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

External Regenerative Resistors (page 506)

Derating Rates

◆ Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

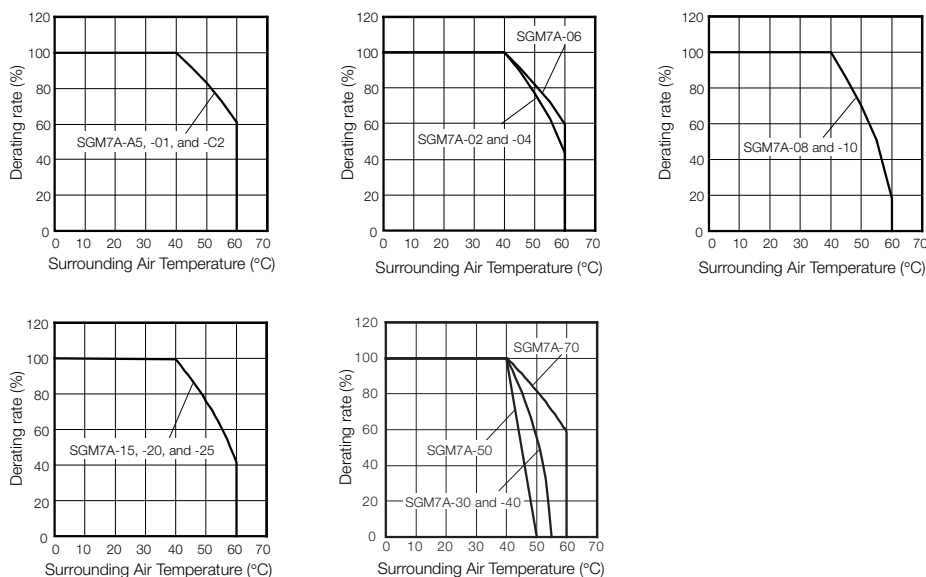

Important

The actual temperature rise depends on the following conditions. Always check the Servomotor temperature with the actual equipment.

- How the heat sink (the Servomotor mounting section) is attached to the installation surface
- Status between heat sink and Servomotor (sealant, reduction gear, etc.)
- What material is used for the Servomotor mounting section
- Servomotor speed

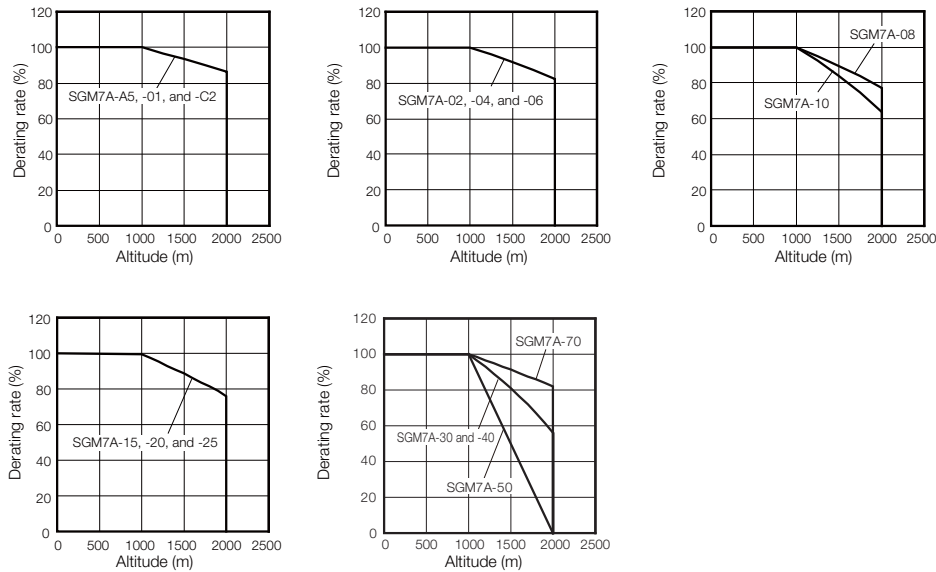

◆ Applications Where the Surrounding Air Temperature Exceeds 40°C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

◆ Applications Where the Altitude Exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Information

When using Servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in *Servomotor Overload Protection Characteristics* (page 50).

Note: 1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.

2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

Plug: CM10-AP10S-□-D for Right-angle Plug

CM10-SP10S-□-D for Straight Plug

(□ depends on the applicable cable size.)

Manufacturer: DDK Ltd.

• Servomotor Connector

A	Phase U	C	Phase W
B	Phase V	D	FG (frame ground)

Manufacturer: DDK Ltd.

◆ SGM7A-70

* Leave a minimum space of 70 mm around the Servomotor from walls and other equipment to allow for a sufficient amount of cooling air.

Model SGM7A-	L	LL	LM	LR	KB1	KB2*	KL1	Flange Dimensions							Shaft End Dimensions		Approx. Mass [kg]
								LA	LB	LC	LE	LG	LH	LZ	S	Q	
70A□A21	397	334	291	63	224	261	108	145	110 ⁰ _{-0.035}	130	6	12	165	9	28 ⁰ _{-0.013}	55	18.5

* For models that have a batteryless absolute encoder, KB is 8 mm greater than the given value. Refer to the following section for the values for individual models.

🔧 *Dimensions of Servomotors with Batteryless Absolute Encoders (page 68)*

Note: 1. The values in parentheses are for Servomotors with Holding Brakes.

2. The values for a straight, without key specification are given. Refer to the information given below for other shaft end specifications and option specifications.

■ Cooling Fan Specifications

Single-phase, 220 V
50/60 Hz
17/15 W
0.11/0.09 A

■ Specifications of Fan Operation Error Detector

Contact Capacity

Maximum allowable voltage: 350 V (AC/DC)
Maximum allowable current: 120 mA (AC/DC)
Maximum controllable power: 360 mW

Alarm Contacts

ON for normal fan rotation.
OFF at $1,680 \pm 100 \text{ min}^{-1}$ max.
OFF for 3 seconds at startup.

■ Shaft End Specifications

• Straight with Key and Tap

■ Connector Specifications

• Encoder Connector (24-bit Encoder)

1	PS	6*	BAT(+)
2	/PS	7	—
3	—	8	—
4	PG5V	9	PG0V
5*	BAT(—)	10	FG (frame ground)

* A battery is required only for an absolute encoder.
Receptacle: CM10-R10P-D
Applicable plug: Not provided by Yaskawa.
Plug: CM10-AP10S-□-D for Right-angle Plug
CM10-SP10S-□-D for Straight Plug
(□ depends on the applicable cable size.)
Manufacturer: DDK Ltd.

• Servomotor Connector

A	Phase U	C	Phase W
B	Phase V	D	FG (frame ground)

Manufacturer: DDK Ltd.

• Fan Connector

A	Fan motor	D	Alarm pin
B	Fan motor	E	Alarm pin
C	—	F	FG (frame ground)

Receptacle: MS3102A14S-6P
Applicable plug: Not provided by Yaskawa.
Plug: MS3108B14S-6S
Cable Clamp: MS3057-6A
Manufacturer: Japan Aviation Electronics Industry, Ltd.

Note: The Servomotor Connector (receptacle) is RoHS compliant. Contact the connector manufacturer for RoHS-compliant cable-side connectors (not provided by Yaskawa).

Servomotors without Gears and with Holding Brakes

* For models that have a batteryless absolute encoder, L is 8 mm greater than the given value. Refer to the following section for the values for individual models.

🔧 **Dimensions of Servomotors with Batteryless Absolute Encoders (page 68)**

Note: 1. The values in parentheses are for Servomotors with Holding Brakes.

2. Dimensions not found in the above table are the same as those in the table on the previous page.

For a Servomotor with a flange output that has square gear flange dimensions (□LC) of 40 mm, we recommend that you design the Servomotor with the dimensions shown in the following figure in order to secure a gap between the gear oil seal and the connecting parts on the load side.

2. Gear dimensions are different from those of the Σ, Σ-II, and Σ-III Series.
3. The values for the shaft end are for a straight shaft with key and tap. If a key and tap are not necessary, specify shaft end code 2 for the 8th digit.

Technical drawing of a square flange with a central hole and eight mounting holes. The drawing includes a side view and a top view.

Side View Dimensions:

- L:** Total length of the flange.
- LR:** Distance from the left face to the center of the first hole.
- L3:** Distance from the left face to the center of the third hole.
- LE:** Distance from the left face to the center of the fifth hole.
- F dia.:** Diameter of the first hole.
- G dia.:** Diameter of the second hole.
- LD dia.:** Diameter of the third hole.
- LB dia.:** Diameter of the fourth hole.
- 5:** Thickness of the flange.

Top View Dimensions:

- LC:** Distance between the centers of two opposite holes.
- LA dia.:** Diameter of the first hole.
- LJ dia.:** Diameter of the second hole.
- 4 x LZ dia.:** Diameter of the four mounting holes.

Surface Texture Symbols:

- 0.06 A:** Surface texture symbol for the first hole.
- 0.02:** Surface texture symbol for the second hole.
- 0.04:** Surface texture symbol for the third hole.
- 0.05 dia. A:** Surface texture symbol for the fourth hole.

* For models that have a batteryless absolute encoder, L and LL are 8 mm greater and the approximate mass is 0.1 kg greater than the given value. Refer to the following section for the values for individual models.

🔧 **Dimensions of Servomotors with Batteryless Absolute Encoders (page 68)**

Note: 1. The values in parentheses are for Servomotors with Holding Brakes.

2. Gear dimensions are different from those of the Σ, Σ-II, and Σ-III Series.

3. The values for the shaft end are for a straight shaft with key and tap. If a key and tap are not necessary, specify shaft end code 2 for the 8th digit.

Selecting Cables

◆ Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

Encoder Cable of 20 m or Less

Encoder Cable of 30 m to 50 m (Relay Cable)

- Note: 1. Cables with connectors on both ends that are compliant with an IP67 protective structure and European Safety Standards are not available from Yaskawa for the SGM7A-15A to SGM7A-70A Servomotors. You must make such a cable yourself. Use the Connectors specified by Yaskawa for these Servomotors. (These Connectors are compliant with the standards.) Yaskawa does not specify what wiring materials to use.
2. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
3. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.
4. Refer to the following manual for the following information.
- Cable dimensional drawings and cable connection specifications
 - Order numbers and specifications of individual connectors for cables
 - Order numbers and specifications for wiring materials
- 📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

For the SGM7A-A5 to -10, there are different order numbers for the Servomotor Main Circuit Cables and Encoder Cables depending on the cable installation direction. Confirm the order numbers before you order.

*3. A cooling fan is built into the SGM7A-70 Servomotor. There is no specified cable to connect to the built-in cooling fan connector. Use appropriate wiring materials for the built-in cooling fan connector specifications. Refer to the following manual for the built-in cooling fan connector specifications that are required to select the cable.

*1. Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 46 mm or larger.

*2. If a battery is connected to the host controller, the Battery Case is not required. If so, use a cable for incremental encoders.

*3. You cannot use a right-angle connector for the encoder of a SGM7A-70A (7.0 kW) Servomotor. Use a straight connector.

◆ Relay Encoder Cable of 30 m to 50 m

Servomotor Model	Name	Length (L)	Order Number	Appearance
SGM7A-A5 to -10 50 W to 1.0 kW	Encoder-end Cable (for all types of encoders) Cable installed toward load	0.3 m	JZSP-C7PRCD-E	
	Encoder-end Cable (for all types of encoders) Cable installed away from load	0.3 m	JZSP-C7PRCE-E	
	Cables with Connectors on Both Ends (for all types of encoders)	30 m	JZSP-UCMP00-30-E	
		40 m	JZSP-UCMP00-40-E	
		50 m	JZSP-UCMP00-50-E	
	Cable with a Battery Case (Required when an absolute encoder is used. *2)	0.3 m	JZSP-CSP12-E	
SGM7A-15 to -70 1.5 kW to 7.0 kW	Encoder-end Cable (for all types of encoders)	0.3 m	JZSP-CVP01-E	
			JZSP-CVP02-E*1	
	Cables with Connectors on Both Ends (for all types of encoders)	30 m	JZSP-UCMP00-30-E	
		40 m	JZSP-UCMP00-40-E	
		50 m	JZSP-UCMP00-50-E	
	Cable with a Battery Case (Required when an absolute encoder is used. *2)	0.3 m	JZSP-CSP12-E	

*1. You cannot use a right-angle connector for the encoder of a SGM7A-70A (7.0 kW) Servomotor.
Use a straight connector.

*2. This Cable is not required if you use a Servomotor with a Batteryless Absolute Encoder, and you connect a battery to the host controller.

Specifications and Ratings

Specifications

Voltage		200 V				
Model SGM7P-		01A	02A	04A	08A	15A
Time Rating		Continuous				
Thermal Class		UL: B, CE: B				
Insulation Resistance		500 VDC, 10 MΩ min.				
Withstand Voltage		1,500 VAC for 1 minute				
Excitation		Permanent magnet				
Mounting		Flange-mounted				
Drive Method		Direct drive				
Rotation Direction		Counterclockwise (CCW) for forward reference when viewed from the load side				
Vibration Class ^{*1}		V15				
Environmental Conditions	Surrounding Air Temperature	0°C to 40°C (With derating, usage is possible between 40°C and 60°C.) ^{*3}				
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)				
	Installation Site	<ul style="list-style-type: none"> • Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 m or less. (With derating, usage is possible between 1,000 m and 2,000 m.)^{*3} • Must be free of strong magnetic fields. 				
	Storage Environment	Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)				
Shock Resistance ^{*2}	Impact Acceleration Rate at Flange	490 m/s ²				
	Number of Impacts	2 times				
Vibration Resistance ^{*2}	Vibration Acceleration Rate at Flange	49 m/s ²				
Applicable SERVOPACKs	SGD7S-	R90A, R90F	2R8A, 2R1F	2R8A, 2R8F	5R5A	120A
	SGD7W-SGD7C-	1R6A ^{*4} , 2R8A ^{*4}	2R8A, 5R5A ^{*4} , 7R6A ^{*4}		5R5A, 7R6A	—

*1. A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

*2. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

*3. Refer to the following section for the derating rates.

Derating Rates (page 86)

*4. If you use a Servomotor together with a Σ-7W or Σ-7C SERVOPACK, the control gain may not increase as much as with a Σ-7S SERVOPACK and other performances may be lower than those achieved with a Σ-7S SERVOPACK.

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.

*3. Refer to the following section for the relation between the heat sinks and derating rate.

 **Servomotor Heat Dissipation Conditions (page 86)**

*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

*7. To externally connect a dynamic brake resistor, select hardware option specification 020 for the SERVOPACK.

However, you cannot externally connect a dynamic brake resistor if you use the following SERVOPACKS

(maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

*8. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

A : Continuous duty zone ——— (solid lines): With three-phase 200-V or single-phase 230-V input
B : Intermittent duty zone - - - - - (dotted lines): With single-phase 200-V input
 — · — · — (dashed-dotted lines): With single-phase 100-V input

*1. The gear output torque is expressed by the following formula.

$$\text{Gear output torque} = \text{Servomotor output torque} \times \frac{1}{\text{Gear ratio}} \times \text{Efficiency}$$

The gear efficiency depends on operating conditions such as the output torque, motor speed, and temperature. The values in the table are typical values for the rated torque, rated motor speed, and a surrounding air temperature of 25°C. They are reference values only.

*2. Use the Servomotor at an effective load ratio of 85% or less. The values in the table take the effective load ratio into consideration.

*3. The maximum motor speed calculated at the motor shaft is 4,500 min⁻¹ max.

Note: 1. The gears that are mounted to Yaskawa Servomotors have not been broken in.

Break in the Servomotor if necessary. First, operate the Servomotor at low speed with no load. If no problems occur, gradually increase the speed and load.

2. The no-load torque for a Servomotor with a Gear is high immediately after the Servomotor starts, and it then decreases and becomes stable after a few minutes. This is a common phenomenon caused by grease circulation in the gears and it does not indicate faulty gears.

3. Other specifications are the same as those for Servomotors without Gears.

The SERVOPACK speed control range is 1:5,000. If you use Servomotors at extremely low speeds (0.02 min⁻¹ or lower at the gear output shaft), if you use Servomotors with a one-pulse feed reference for extended periods, or under some other operating conditions, the gear bearing lubrication may be insufficient. That may cause deterioration of the bearing or increase the load ratio. Contact your Yaskawa representative if you use a Servomotor under these conditions.

* The moment of inertia for the Servomotor and gear is the value without a holding brake. You can calculate the moment of inertia for a Servomotor with a Gear and Holding Brake with the following formula.
Motor moment of inertia for a Servomotor with a Holding Brake from *Ratings of Servomotors without Gears* (page 80) + Moment of inertia for the gear from the above table.

Important

During operation, the gear generates the loss at the gear mechanism and oil seal. The loss depends on the torque and motor speed conditions. The temperature rise depends on the loss and heat dissipation conditions. For the heat dissipation conditions, always refer to the following table and check the gear and motor temperatures with the actual equipment. If the temperature is too high, implement the following measures.

- Decrease the load ratio.
- Change the heat dissipation conditions.
- Use forced-air cooling for the motor with a cooling fan or other means.

Model	Heat Sink Size			
	1/5	1/11	1/21	1/33
SGM7P-01			A	
SGM7P-02				
SGM7P-04	C		B	
SGM7P-08				
SGM7P-15				

- A: 250 mm × 250 mm × 6 mm, aluminum plate
- B: 300 mm × 300 mm × 12 mm, aluminum plate
- C: 350 mm × 350 mm × 12 mm, aluminum plate

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Torque-Motor Speed Characteristics* (page 81).

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Ratings of Servomotors without Gears* (page 80). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVO-PACKs.
Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

◆ When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

External Regenerative Resistors (page 506)

Derating Rates

◆ Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

Important

The actual temperature rise depends on the following conditions. Always check the Servomotor temperature with the actual equipment.

- How the heat sink (the Servomotor mounting section) is attached to the installation surface
- Status between heat sink and Servomotor (sealant, reduction gear, etc.)
- What material is used for the Servomotor mounting section
- Servomotor speed

◆ Applications Where the Surrounding Air Temperature Exceeds 40°C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

◆ Applications Where the Altitude Exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Information

When using Servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in *Servomotor Overload Protection Characteristics* (page 84).

- Note: 1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

04A□AH70□	1/33	216 (247.5)	35	60	$32^{+0.025}_0$	84	5	6 × M8 × 12L	7.8 (8.6)

* For models that have a batteryless absolute encoder, L is 8 mm greater and the approximate mass is 0.1 kg greater than the given value. Refer to the following section for the values for individual models.

 **Dimensions of Servomotors with Batteryless Absolute Encoders (page 93)**

Note: 1. The values in parentheses are for Servomotors with Holding Brakes.

2. Dimensions not found in the above table are the same as those in the table on the previous page.

For a Servomotor with a flange output that has square gear flange dimensions (□LC) of 40 mm, we recommend that you design the Servomotor with the dimensions shown in the following figure in order to secure a gap between the gear oil seal and the connecting parts on the load side.

Selecting Cables

◆ Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

Encoder Cable of 20 m or Less

Encoder Cable of 30 m to 50 m (Relay Cable)

Note: 1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.

2. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

3. Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

	SGD7W- SGD7C-	5R5A*4, 7R6A*4	7A6A	—								

*1. A vibration class of V15 indicates a vibration amplitude of 15 μ m maximum on the Servomotor without a load at the rated motor speed.

*2. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

*3. Refer to the following section for the derating rates.

 **Derating Rates (page 106)**

*4. If you use a Servomotor together with a Σ -7W or Σ -7C SERVOPACK, the control gain may not increase as much as with a Σ -7S SERVOPACK and other performances may be lower than those achieved with a Σ -7S SERVOPACK.

Allowable Shaft Loads* ⁸	LF	mm	40		58			
	Allowable Radial Load	N	490				686	980
	Allowable Thrust Load	N	98				343	392

Note: The values in parentheses are for Servomotors with Holding Brakes.

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values with an aluminum or steel heat sink of the dimensions given in the table.

*3. Refer to the following section for the relation between the heat sinks and derating rate.

 **Servomotor Heat Dissipation Conditions (page 106)**

*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

*7. To externally connect a dynamic brake resistor, select hardware option specification 020 for the SERVOPACK.

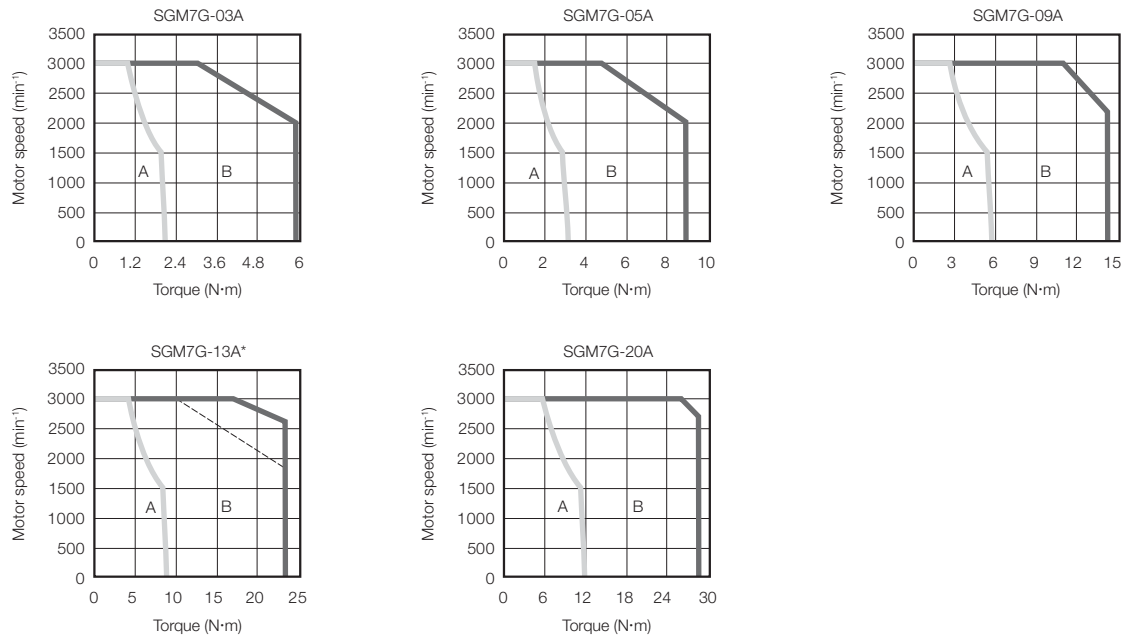

*8. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

*9. The values for the SGM7G-03A to -20A Servomotors with batteryless absolute encoders are the same as the values in the table.

Torque-Motor Speed Characteristics

A : Continuous duty zone — (solid lines): With three-phase 200-V or single-phase 230-V input
B : Intermittent duty zone - - - - - (dotted lines): With single-phase 200-V input

* A single-phase power input can be used in combination with the SGD7S-120A□□A008.

- Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Ratings

	Allowable Radial Load	N	1470			1764			4998
	Allowable Thrust Load	N	490			588			2156

Note: The values in parentheses are for Servomotors with Holding Brakes.

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values with an aluminum or steel heat sink of the dimensions given in the table.

*3. Refer to the following section for the relation between the heat sinks and derating rate.

 **Servomotor Heat Dissipation Conditions (page 106)**

*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

*7. To externally connect a dynamic brake resistor, select hardware option specification 020 for the SERVOPACK.

*8. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

*9. This is the value if you combine the SGM7G-30A with the SGD7S-200A.

*10. The values for the SGM7G-30A to -1EA Servomotors with batteryless absolute encoders are the same as the values in the table.

Torque-Motor Speed Characteristics

A : Continuous duty zone (solid lines): With three-phase 200-V input
B : Intermittent duty zone (dotted lines): When combined with the SGD7S-200A

* Use an SGM7G-75A Servomotor with a Holding Brake with an output torque of 14.4 N·m (30% of the rated torque) or lower when using the Servomotor in continuous operation at the maximum motor speed of 3,000 min⁻¹.

Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.

2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Torque-Motor Speed Characteristics* on page 101 and 103.

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Servomotor Ratings* (pages 100 and 102). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVOPACKs.

Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

 *External Regenerative Resistors* (page 506)

Derating Rates

◆ Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

Important

The actual temperature rise depends on the following conditions. Always check the Servomotor temperature with the actual equipment.

- How the heat sink (the Servomotor mounting section) is attached to the installation surface
- Status between heat sink and Servomotor (sealant, reduction gear, etc.)
- What material is used for the Servomotor mounting section
- Servomotor speed

◆ Servomotor Derating Rates for Surrounding Air Temperatures

Apply a suitable derating rate from the following graphs according to the surrounding air temperature of the Servomotor (60°C max.).

◆ Applications Where the Altitude Exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Information

When using Servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in *Servomotor Overload Protection Characteristics* (page 104).

Note: 1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.

2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

Selecting Cables

◆ Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

Encoder Cable of 20 m or Less

Encoder Cable of 30 m to 50 m (Relay Cable)

- Note: 1. Cables with connectors on both ends that are compliant with an IP67 protective structure and European Safety Standards are not available from Yaskawa for the SGM7G Servomotors. You must make such a cable yourself. Use the Connectors specified by Yaskawa for these Servomotors. (These Connectors are compliant with the standards.) Yaskawa does not specify what wiring materials to use.
2. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
3. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.
4. Refer to the following manual for the following information.
- Cable dimensional drawings and cable connection specifications
 - Order numbers and specifications of individual connectors for cables
 - Order numbers and specifications for wiring materials
- 📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

◆ Servomotor Main Circuit Cables

*1. Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 90 mm or larger.

*2. This order number is for a set of two cables (Main Power Supply Cable and Holding Brake Cable).

When you purchase them separately, the order numbers for Main Power Supply Cables are the same as for a Servomotor without a Holding Brake.

The following order numbers are for a Holding Brake Cable. These Standard Cables are Flexible Cables.

- Cable with Straight Plug: JZSP-U7B23-□□-E
- Cable with Right-angle Plug: JZSP-U7B24-□□-E

Note: If you need a Cable with a length of 20 m to 50 m, consider the operating conditions and specify a suitable length.

◆ Encoder Cables of 20 m or Less

Servomotor Model	Name	Length (L)	Order Number		Appearance
			Standard Cable	Flexible Cable* ¹	
All SGM7G models	For incremental encoder, or batteryless absolute encoder	3 m	JZSP-CVP01-03-E	JZSP-CVP11-03-E	
		5 m	JZSP-CVP01-05-E	JZSP-CVP11-05-E	
		10 m	JZSP-CVP01-10-E	JZSP-CVP11-10-E	
		15 m	JZSP-CVP01-15-E	JZSP-CVP11-15-E	
		20 m	JZSP-CVP01-20-E	JZSP-CVP11-20-E	
		3 m	JZSP-CVP02-03-E	JZSP-CVP12-03-E	
		5 m	JZSP-CVP02-05-E	JZSP-CVP12-05-E	
		10 m	JZSP-CVP02-10-E	JZSP-CVP12-10-E	
		15 m	JZSP-CVP02-15-E	JZSP-CVP12-15-E	
		20 m	JZSP-CVP02-20-E	JZSP-CVP12-20-E	
	For absolute encoder: With Battery Case* ²	3 m	JZSP-CVP06-03-E	JZSP-CVP26-03-E	
		5 m	JZSP-CVP06-05-E	JZSP-CVP26-05-E	
		10 m	JZSP-CVP06-10-E	JZSP-CVP26-10-E	
		15 m	JZSP-CVP06-15-E	JZSP-CVP26-15-E	
		20 m	JZSP-CVP06-20-E	JZSP-CVP26-20-E	
		3 m	JZSP-CVP07-03-E	JZSP-CVP27-03-E	
		5 m	JZSP-CVP07-05-E	JZSP-CVP27-05-E	
		10 m	JZSP-CVP07-10-E	JZSP-CVP27-10-E	
		15 m	JZSP-CVP07-15-E	JZSP-CVP27-15-E	
		20 m	JZSP-CVP07-20-E	JZSP-CVP27-20-E	

*1. Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 46 mm or larger.

*2. If a battery is connected to the host controller, the Battery Case is not required. If so, use a cable for incremental encoders.

◆ Relay Encoder Cables of 30 m to 50 m

Servomotor Model	Name	Length (L)	Order Number for Standard Cable	Appearance
All SGM7G models	Encoder-end Cable (for all types of encoders)	0.3 m	JZSP-CVP01-E	
			JZSP-CVP02-E	
	Cables with Connectors on Both Ends (for all types of encoders)	30 m	JZSP-UCMP00-30-E	
		40 m	JZSP-UCMP00-40-E	
		50 m	JZSP-UCMP00-50-E	
	Cable with a Battery Case (Required when an absolute encoder is used.)*	0.3 m	JZSP-CSP12-E	

* This Cable is not required if you use a Servomotor with a Batteryless Absolute Encoder, and you connect a battery to the host controller.

Specifications and Ratings

Specifications

Voltage		200 V		
Model SGMMV-		A1A	A2A	A3A
Time Rating		Continuous		
Thermal Class		B		
Insulation Resistance		500 VDC, 10 M Ω min.		
Withstand Voltage		1,500 VAC for 1 minute		
Excitation		Permanent magnet		
Mounting		Flange-mounted		
Drive Method		Direct drive		
Rotation Direction		Counterclockwise (CCW) for forward reference when viewed from the load side		
Vibration Class* ¹		V15		
Environmental Conditions	Surrounding Air Temperature	0°C to 40°C		
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)		
	Installation Site	<ul style="list-style-type: none"> • Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 m or less. • Must be free of strong magnetic fields. 		
	Storage Environment	Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)		
Shock Resistance* ²	Impact Acceleration Rate at Flange	490 m/s ²		
	Number of Impacts	2 times		
Vibration Resistance* ²	Vibration Acceleration Rate at Flange	49 m/s ²		
Applicable SERVOPACKs	SGD7S-	R90A, R90F	1R6A, 2R1F	
	SGD7W-SGD7C-	1R6A* ³ , 2R8A* ³	1R6A, 2R8A* ³	

*1. A vibration class of V15 indicates a vibration amplitude of 15 μ m maximum on the Servomotor without a load at the rated motor speed.

*2. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

*3. If you use a Servomotor together with a Σ -7W or Σ -7C SERVOPACK, the control gain may not increase as much as with a Σ -7S SERVOPACK and other performances may be lower than those achieved with a Σ -7S SERVOPACK.

Servomotor Ratings

Voltage		200 V			
Model SGMMV-		A1A	A2A	A3A	
Rated Output* ¹	W	10	20	30	
Rated Torque* ^{1, *2}	N·m	0.0318	0.0637	0.0955	
Instantaneous Maximum Torque* ¹	N·m	0.0955	0.191	0.286	
Rated Current* ¹	Arms	0.70	0.66	0.98	
Instantaneous Maximum Current* ¹	Arms	2.0	1.9	2.9	
Rated Motor Speed* ¹	min ⁻¹	3000			
Maximum Motor Speed* ¹	min ⁻¹	6000			
Torque Constant	N·m/Arms	0.0516	0.107	0.107	
Motor Moment of Inertia	×10 ⁻⁷ kg·m ²	2.72 (4.07)	4.66 (6.02)	6.68 (8.04)	
Rated Power Rate* ¹	kW/s	3.72	8.71	13.7	
Rated Angular Acceleration Rate* ¹	rad/s ²	117000	137000	143000	
Heat Sink Size (Aluminum)* ³	mm	150×150×3		250×250×6	
Protective Structure* ⁴		Totally enclosed, self-cooled, IP55 (except for shaft opening)			
Holding Brake Specifications* ⁵	Rated Voltage	V	24 VDC ^{+10%} ₀		
	Capacity	W	2.0	2.6	
	Holding Torque	N·m	0.0318	0.0637	0.0955
	Coil Resistance	Ω (at 20°C)	320	221.5	
	Rated Current	A (at 20°C)	0.075	0.108	
	Time Required to Release Brake	ms	40		
	Time Required to Brake	ms	100		
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)* ⁶		30 times			
	With External Regenerative Resistor		30 times		
Allowable Shaft Loads* ⁷	LF	mm	16		
	Allowable Radial Load	N	34	44	
	Allowable Thrust Load	N	14.5		

Note: The values in parentheses are for Servomotors with Holding Brakes.

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.

*2. The rated torques are the continuous allowable torque values with an aluminum or steel heat sink of the dimensions given in the table.

*3. Refer to the following section for the relation between the heat sinks and derating rate.

 **Servomotor Heat Dissipation Conditions (page 125)**

*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

*7. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

Torque-Motor Speed Characteristics

- A** : Continuous duty zone
B : Intermittent duty zone*

* The characteristics are the same for three-phase 200 V, single-phase 200 V, and single-phase 100 V input.

- Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Torque-Motor Speed Characteristics* (page 123).

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Servomotor Ratings* (page 122). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVOPACKs.
Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-R90A, -1R6A, -R90F, and -2R1F

◆ When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

External Regenerative Resistors (page 506)

Derating Rates

◆ Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

Important

The actual temperature rise depends on the following conditions. Always check the Servomotor temperature with the actual equipment.

- How the heat sink (the Servomotor mounting section) is attached to the installation surface
- Status between heat sink and Servomotor (sealant, reduction gear, etc.)
- What material is used for the Servomotor mounting section
- Servomotor speed

Information When using Servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in *Servomotor Overload Protection Characteristics* (page 123).

Note: The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

External Dimensions

Servomotors without Holding Brakes

◆ SGMMV-A1, -A2 and -A3

Selecting Cables

◆ Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

Encoder Cable of 20 m or Less

Encoder Cable of 30 m to 50 m (Relay Cable)

Note: 1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.

2. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

3. Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

◆ Servomotor Main Circuit Cables

Name	Length (L)	Order Number		Appearance
		Standard Cable	Flexible Cable*	
For Servomotors without Holding Brakes	3 m	JZSP-CF2M00-03-E	JZSP-CF2M20-03-E	
	5 m	JZSP-CF2M00-05-E	JZSP-CF2M20-05-E	
	10 m	JZSP-CF2M00-10-E	JZSP-CF2M20-10-E

	20 m	JZSP-CSP19-20-E	JZSP-CSP29-20-E	

* Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 46 mm or larger.

◆ Relay Encoder Cables of 30 m to 50 m

Name	Length (L)	Order Number	Appearance
Cables with Connectors on Both Ends (for incremental or absolute encoder)	30 m	JZSP-UCMP00-30-E	
	40 m	JZSP-UCMP00-40-E	
	50 m	JZSP-UCMP00-50-E	
Cable with a Battery Case (Required when an absolute encoder is used.)*	0.3 m	JZSP-CSP12-E	

* This Cable is not required if a battery is connected to the host controller.

MEMO

Direct Drive Servomotors

■ Features

SGM7D (With Core, Outer Rotor) 132

- Ideal for applications that require high torque, high precision, and high rigidity.
- Application to large loads possible with a high allowable load moment of inertia ratio.
- Highly accurate indexing can be achieved with a high-resolution 24-bit encoder.
- High rigidity.
- Large center aperture design to save wiring space.

SGM7E (Coreless, Inner Rotor) 158

- Ideal for applications that require smooth movement without speed fluctuations.
- Low cogging with a core-less system provides smooth operation free from speed variations.
- Highly accurate indexing can be achieved with a high-resolution 24-bit encoder.
- High machine precision for runout at end of shaft and runout of shaft surface (0.01 mm).

SGM7F (With Core, Inner Rotor) 174

- Ideal for applications that require downsizing and a shorter takt time.
- High-speed, high-frequency positioning.
- Low heat generation.
- Highly accurate indexing can be achieved with a high-resolution 24-bit encoder.
- High machine precision for runout at end of shaft and runout of shaft surface (0.01 mm).

SGMCS (Small Capacity, with Core, Inner Rotor) 196

- Compact design with small rotor diameter.
- Low inertia, low heat generation.
- High-speed, high-frequency positioning.
- High machine precision for runout at end of shaft and runout of shaft surface (0.01 mm).
- Built-in 22-bit encoder.

SGM7E (Small Capacity, Coreless, Inner Rotor or Medium Capacity, with Core, Inner Rotor)..... 210

- High-speed operation can shorten takt time.
- Built-in 20-bit encoder.

*1. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum or steel heat sink of the dimensions given in the table.

*2. The rated intermittent torque is the value for 60% ED.

*3. To externally connect dynamic brake resistance, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistance if you use the following SERVOPACKS (maximum applicable motor capacity: 400 W).

- SGD7S-2R8□□□A020F82□
- SGD7S-2R8□00A020F83□

*4. If you use an SGD7S-120A008 SERVOPACK and SGM7D Servomotor together, use the ratios given on the bottom line.

*5. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table. The allowable load is for a static load in one direction.

When designing the system, multiply the allowable load by the following safety coefficient depending on the type of load.

- Smooth load with no shock: 1/3
- Light repetitive load: 1/5
- Shock load: 1/10

Where F is the external force,
Thrust load = F + Load mass
Moment load = 0

Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L

Where F is the external force,
Thrust load = Load mass
Moment load = F × L

Note: 1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

2. For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

- SGD7S-2R8□□□A020F82□
- SGD7S-2R8□□□A020F83□

*4. If you use an SGD7S-120A008 SERVOPACK and SGM7D Servomotor together, use the ratios given on the bottom line.

*5. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

The allowable load is for a static load in one direction.

When designing the system, multiply the allowable load by the following safety coefficient depending on the type of load.

- Smooth load with no shock: 1/3
- Light repetitive load: 1/5
- Shock load: 1/10

Where F is the external force,
Thrust load = F + Load mass
Moment load = 0

Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L

Where F is the external force,
Thrust load = Load mass
Moment load = F × L

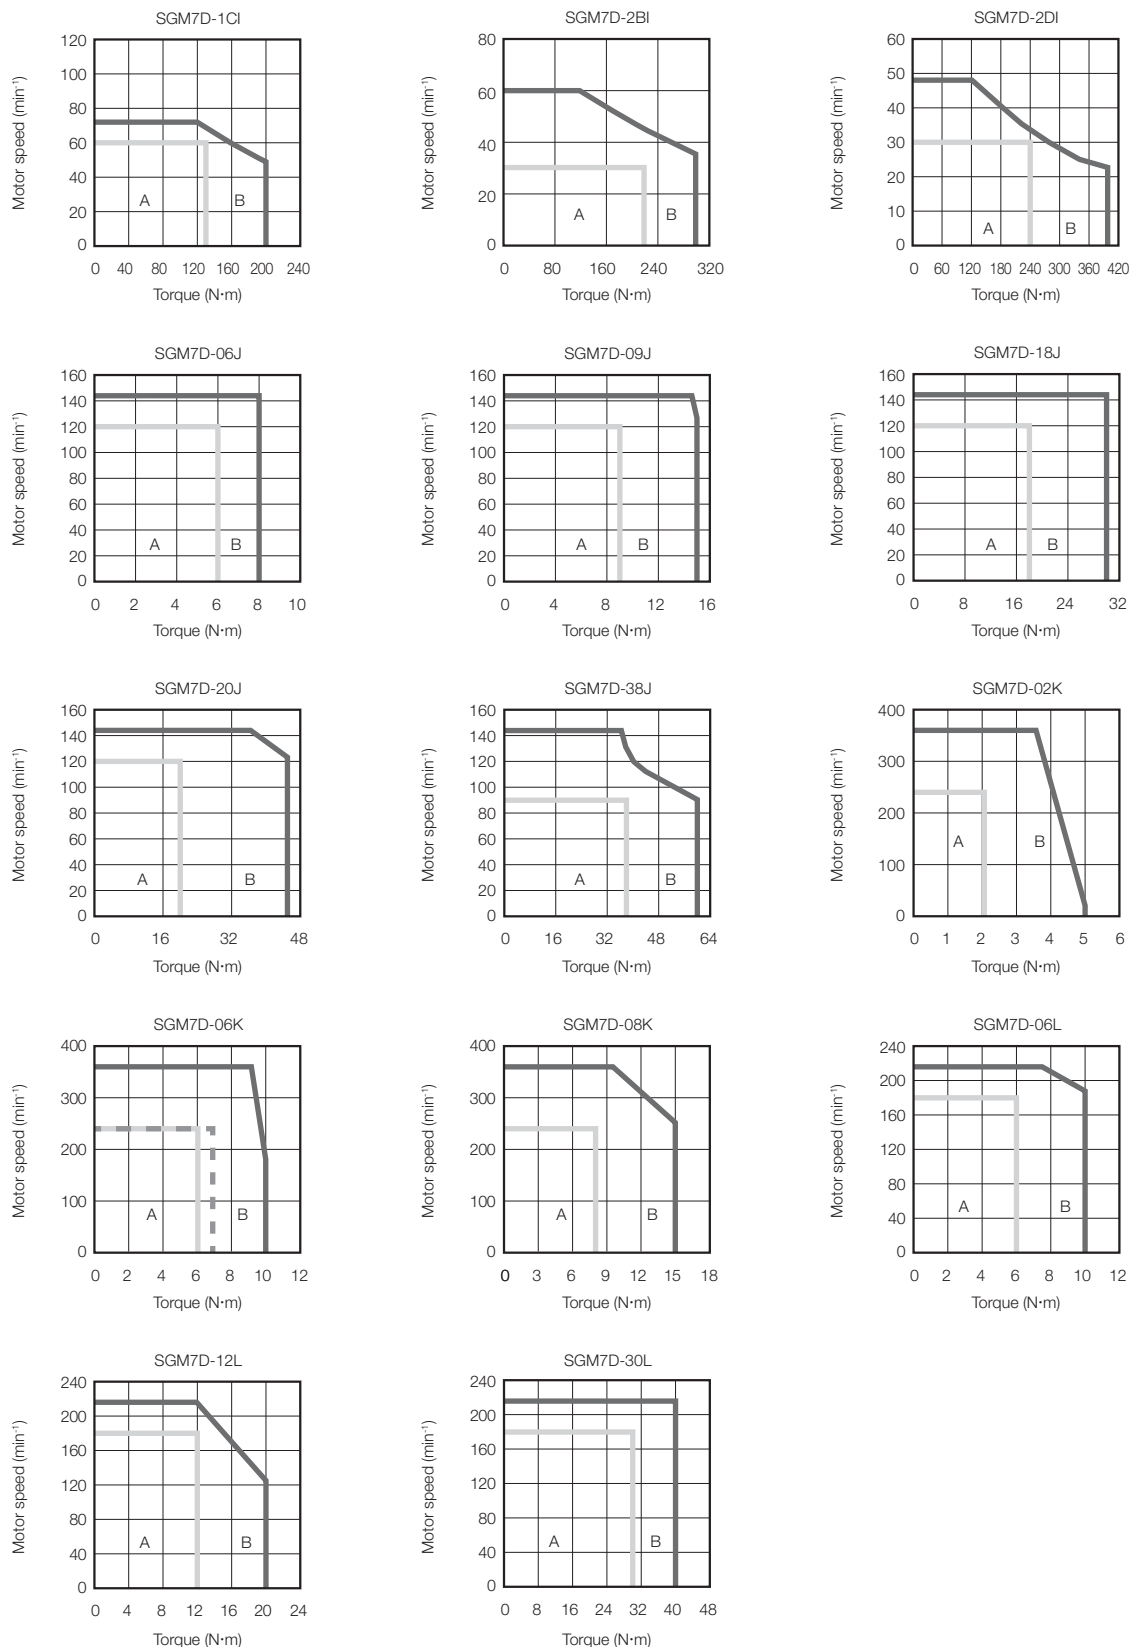

Note: 1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

2. For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Torque-Motor Speed Characteristics

- A** : Continuous duty zone (dotted lines): With 60%ED 10 min. duty factor
B : Intermittent duty zone* (solid lines): With three-phase 200-V, single-phase 230-V, and single-phase 200-V input

* The characteristics are the same for three-phase 200 V and single-phase 200 V input.

Contact your Yaskawa representative for information on the characteristics for single-phase 100 V input.

Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.

2. The characteristics in the intermittent duty zone depend on the power supply voltage.

3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.

4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

Use the Servomotor so that the effective force remains within the continuous duty zone. Refer to the following section for details on the effective torque.

 **Torque-Motor Speed Characteristics** (page 139)

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Ratings* (pages 136 to 138). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVO-PACKs.

Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

 *External Regenerative Resistors* (page 506)

30L□C41 (Standard mechanical precision)	112 ^{-0.02} _{-0.06}
30L□C42 (High mechanical precision)	111.9 ^{-0.02} _{-0.06}

■ Connector Specifications

• Servomotor Connector

1	Phase U	Red
2	Phase V	Gray
3	Phase W	Blue
4	FG (frame ground)	Green (yellow)

Models

- Plug: 350779-1
- Pins: 350218-3 or 350547-3 (No.1 to 3)
- Ground pin: 350654-1 or 350669-1 (No. 4)
- Manufacturer: Tyco Electronics Japan G.K.

Mating Connector

- Cap: 350780-1
- Socket: 350536-3 or 350550-3

• Encoder Connector

1	PG5V
2	PG0V
3*	BAT
4*	BAT0
5	PS
6	/PS
Connector case	FG (frame ground)

* Only absolute-value models with multiturn data.

Model: 55102-0600

Manufacturer: Molex Japan LLC

Mating connector: 54280-0609

Selecting Cables

◆ Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

Encoder Cable of 20 m or Less

Encoder Cable of 30 m to 50 m (Relay Cable)

Note: 1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.

2. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

3. Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

◆ Servomotor Main Circuit Cables

Servomotor Model	Length (L)	Order Number		Appearance
		Standard Cable	Flexible Cable*	
SGM7D-□□F	3 m	JZSP-CMM00-03-E	JZSP-C7DM21-03-E	
SGM7D-08G to -45G	5 m	JZSP-CMM00-05-E	JZSP-C7DM21-05-E	
SGM7D-□□I	10 m	JZSP-CMM00-10-E	JZSP-C7DM21-10-E	
SGM7D-□□J	15 m	JZSP-CMM00-15-E	JZSP-C7DM21-15-E	
SGM7D-□□L	20 m	JZSP-CMM00-20-E	JZSP-C7DM21-20-E	
SGM7D-01G or -05G SGM7D-□□H SGM7D-□□K	3 m	JZSP-CMM00-03-E	JZSP-CMM01-03-E	
	5 m	JZSP-CMM00-05-E	JZSP-CMM01-05-E	
	10 m	JZSP-CMM00-10-E	JZSP-CMM01-10-E	
	15 m	JZSP-CMM00-15-E	JZSP-CMM01-15-E	
	20 m	JZSP-CMM00-20-E	JZSP-CMM01-20-E	

* Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 90 mm or larger.

Note: Direct Drive Servomotors are not available with holding brakes.

◆ Encoder Cables of 20 m or Less

Servomotor Model	Name	Length (L)	Order Number		Appearance

Specifications and Ratings

Specifications

Voltage			200 V										
Model SGM7E-			02B	05B	07B	04C	10C	14C	08D	17D	25D	16E	35E
Time Rating			Continuous										
Thermal Class			A										
Insulation Resistance			500 VDC, 10 MΩ min.										
Withstand Voltage			1,500 VAC for 1 minute										
Excitation			Permanent magnet										
Mounting			Flange-mounted										
Drive Method			Direct drive										
Rotation Direction			Counterclockwise (CCW) for forward reference when viewed from the load side										
Vibration Class* ¹			V15										
Absolute Accuracy			±15 s										
Repeatability			±1.3 s										
Protective Structure* ²			Totally enclosed, self-cooled, IP42 (The protective structure is IP40 for CE Marking.)										
Environmental Conditions	Surrounding Air Temperature		0°C to 40°C (with no freezing)										
	Surrounding Air Humidity		20% to 80% relative humidity (with no condensation)										
	Installation Site		<ul style="list-style-type: none">• Must be indoors and free of corrosive and explosive gases.• Must be well-ventilated and free of dust and moisture.• Must facilitate inspection and cleaning.• Must have an altitude of 1,000 m or less.• Must be free of strong magnetic fields.										
	Storage Environment		Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)										
Mechanical Tolerances* ³	Runout of Output Shaft Surface	mm	0.02 (0.01 for high machine precision option)										
	Runout at End of Output Shaft	mm	0.04 (0.01 for high machine precision option)										
	Parallelism between Mounting Surface and Output Shaft Surface	mm	0.07							0.08			
	Concentricity between Output Shaft and Flange Outer Diameter	mm	0.07							0.08			
Shock Resistance* ⁴		Impact Acceleration Rate at Flange	490 m/s ²										
		Number of Impacts	2 times										
Vibration Resistance* ⁴		Vibration Acceleration Rate at Flange	49 m/s ²										
Applicable SERVOPACKs		SGD7S-	2R8A, 2R1F			2R8A, 2R8F					5R5A		
		SGD7W-SGD7C-	2R8A										

*1. A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

*2. The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded. Protective structure specifications apply only when the special cable is used.

*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

Ratings

Voltage			200 V

Rated Angular Acceleration Rate ^{*1}	rad/s ²		710	980	910	520	710	640	280	330		170	240
Heat Sink Size	mm		350 × 350 × 12			450 × 450 × 12			550 × 550 × 12			650 × 650 × 12	
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)			10 times				5 times	3 times					
	With External Regenerative Resistor and External Dynamic Brake Resistor ^{*3}		10 times				5 times	3 times					
Allowable Load ^{*4}	Allowable Thrust Load	N	1500			3300			4000			11000	
	Allowable Moment Load	N·m	40	50	64	70	75	90	93	103	135	250	320

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

*4. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,
Thrust load = F + Load mass
Moment load = 0

Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L

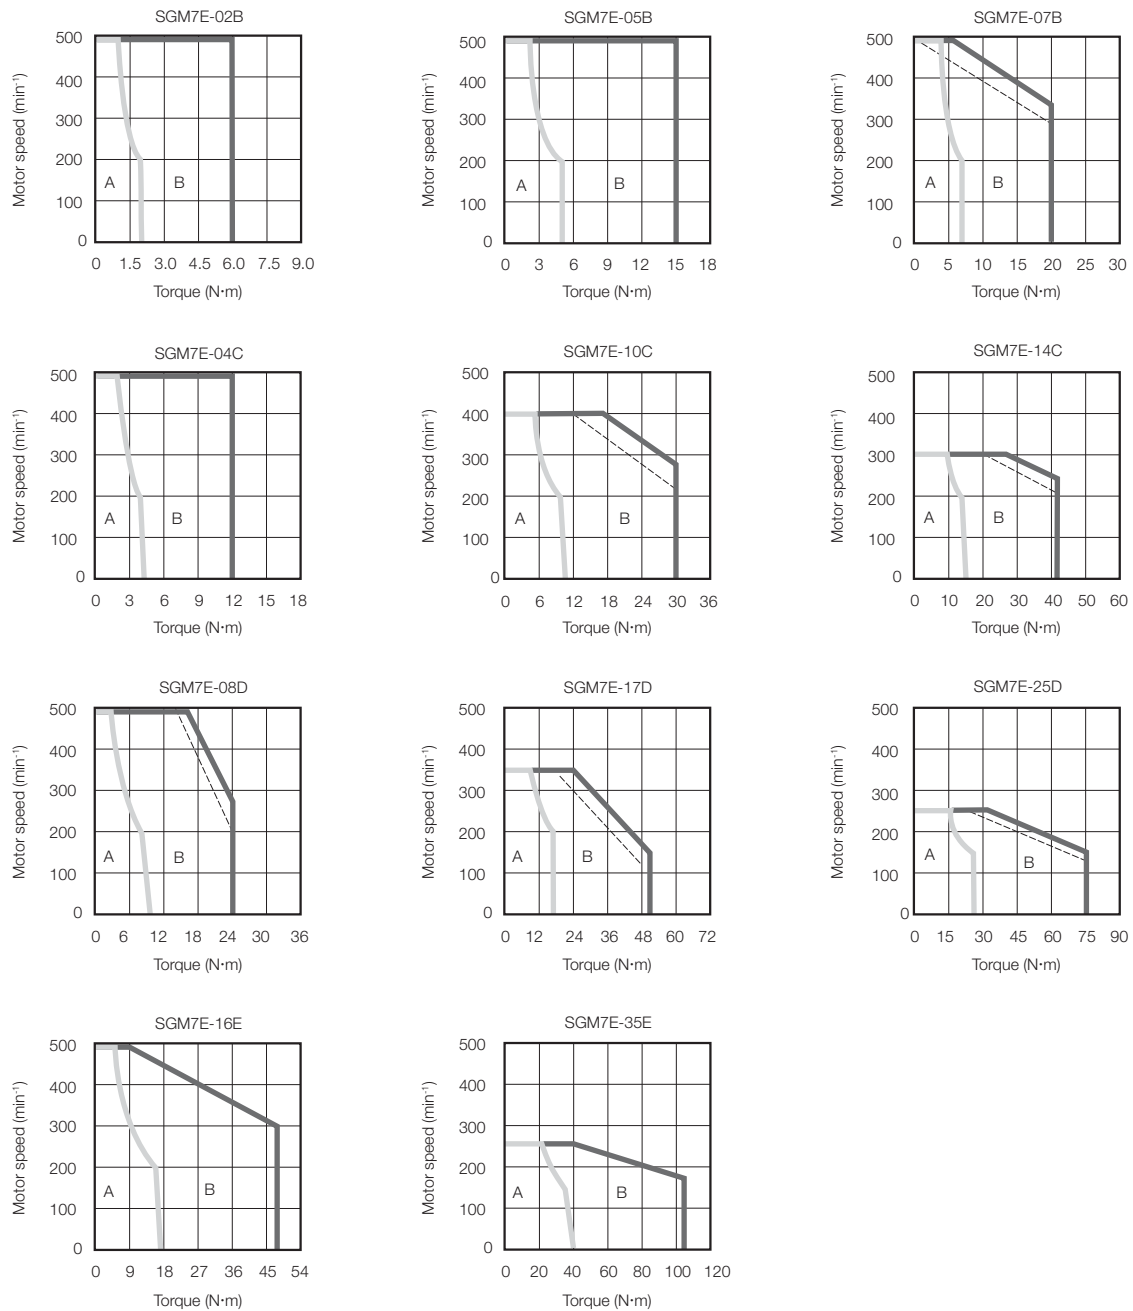

Where F is the external force,
Thrust load = Load mass
Moment load = F × L

Note: For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Torque-Motor Speed Characteristics

A : Continuous duty zone — (solid lines): With three-phase 200-V input
B : Intermittent duty zone - - - (dotted lines): With single-phase 100-V input

- Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Torque-Motor Speed Characteristics* on page 161.

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Ratings* (page 160). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

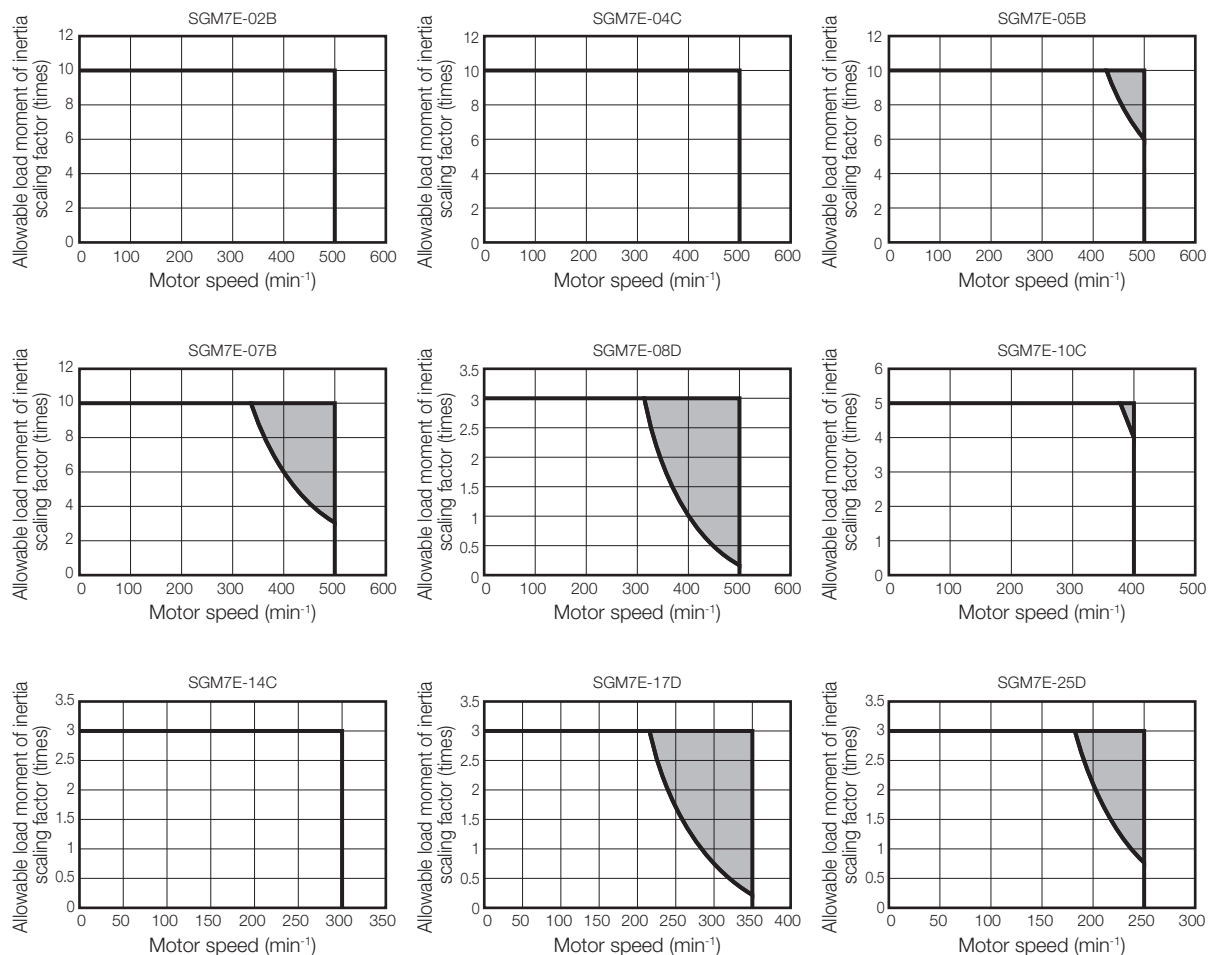

Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVO-PACKs.

Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-2R8A and -2R8F

◆ When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

External Regenerative Resistors (page 506)

Selecting Cables

◆ Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

Encoder Cable of 20 m or Less

Encoder Cable of 30 m to 50 m (Relay Cable)

- Note: 1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
2. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.
3. Refer to the following manual for the following information.
- Cable dimensional drawings and cable connection specifications
 - Order numbers and specifications of individual connectors for cables
 - Order numbers and specifications for wiring materials
- 📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)*

Withstand Voltage			1,500 VAC for 1 minute										
Excitation			Permanent magnet										
Mounting			Flange-mounted										
Drive Method			Direct drive										
Rotation Direction			Counterclockwise (CCW) for forward reference when viewed from the load side										
Vibration Class* ¹			V15										
Absolute Accuracy			±15 s										
Repeatability			±1.3 s										
Protective Structure* ²			Totally enclosed, self-cooled, IP42 (The protective structure is IP40 for CE Marking.)										
Environmental Conditions	Surrounding Air Temperature		0°C to 40°C (with no freezing)										
	Surrounding Air Humidity		20% to 80% relative humidity (with no condensation)										
	Installation Site		<ul style="list-style-type: none">• Must be indoors and free of corrosive and explosive gases.• Must be well-ventilated and free of dust and moisture.• Must facilitate inspection and cleaning.• Must have an altitude of 1,000 m or less.• Must be free of strong magnetic fields.										
	Storage Environment		Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)										
Mechanical Tolerances* ³	Runout of Output Shaft Surface		mm	0.02 (0.01 for high machine precision option)									
	Runout at End of Output Shaft		mm	0.04 (0.01 for high machine precision option)									
	Parallelism between Mounting Surface and Output Shaft Surface		mm	0.07									
	Concentricity between Output Shaft and Flange Outer Diameter		mm	0.07									
Shock Resistance* ⁴	Impact Acceleration Rate at Flange		490 m/s ²										
	Number of Impacts		2 times										
Vibration Resistance* ⁴	Vibration Acceleration Rate at Flange		49 m/s ²										
Applicable SERVOPACKs			SGD7S-	2R8A, 2R1F	2R8A, 2R8F		5R5A	2R8A, 2R8F	5R5A	7R6A	5R5A	7R6A* ⁵ , 120A	
			SGD7W-SGD7C-	2R8A				2R8A				7R6A* ⁵	

*1. A vibration class of V15 indicates a vibration amplitude of 15 μ m maximum on the Servomotor without a load at the rated motor speed.

*2. The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded. Protective structure specifications apply only when the special cable is used.

*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures. The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

*5. Use derated values for this combination. Refer to the following section for information on derating values.

Ratings (page 176)

Heat Sink Size	mm	300 × 300 × 12			350 × 350 × 12			450 × 450 × 12			550 × 550 × 12	
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)		25 times	35 times	35 times	25 times	40 times	45 times	15 times	25 times	25 times	10 times	15 times
	With External Regenerative Resistor and External Dynamic Brake Resistor ^{*3}	25 times	35 times	35 times	25 times	40 times	45 times	15 times	25 times	25 times	10 times	15 times
Allowable Load ^{*4}	Allowable Thrust Load	N	1100			1500			3300			4000
	Allowable Moment Load	N·m	22	24	26	45	55	65	92	98	110	210 225

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

*4. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,
Thrust load = F + Load mass
Moment load = 0

Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L

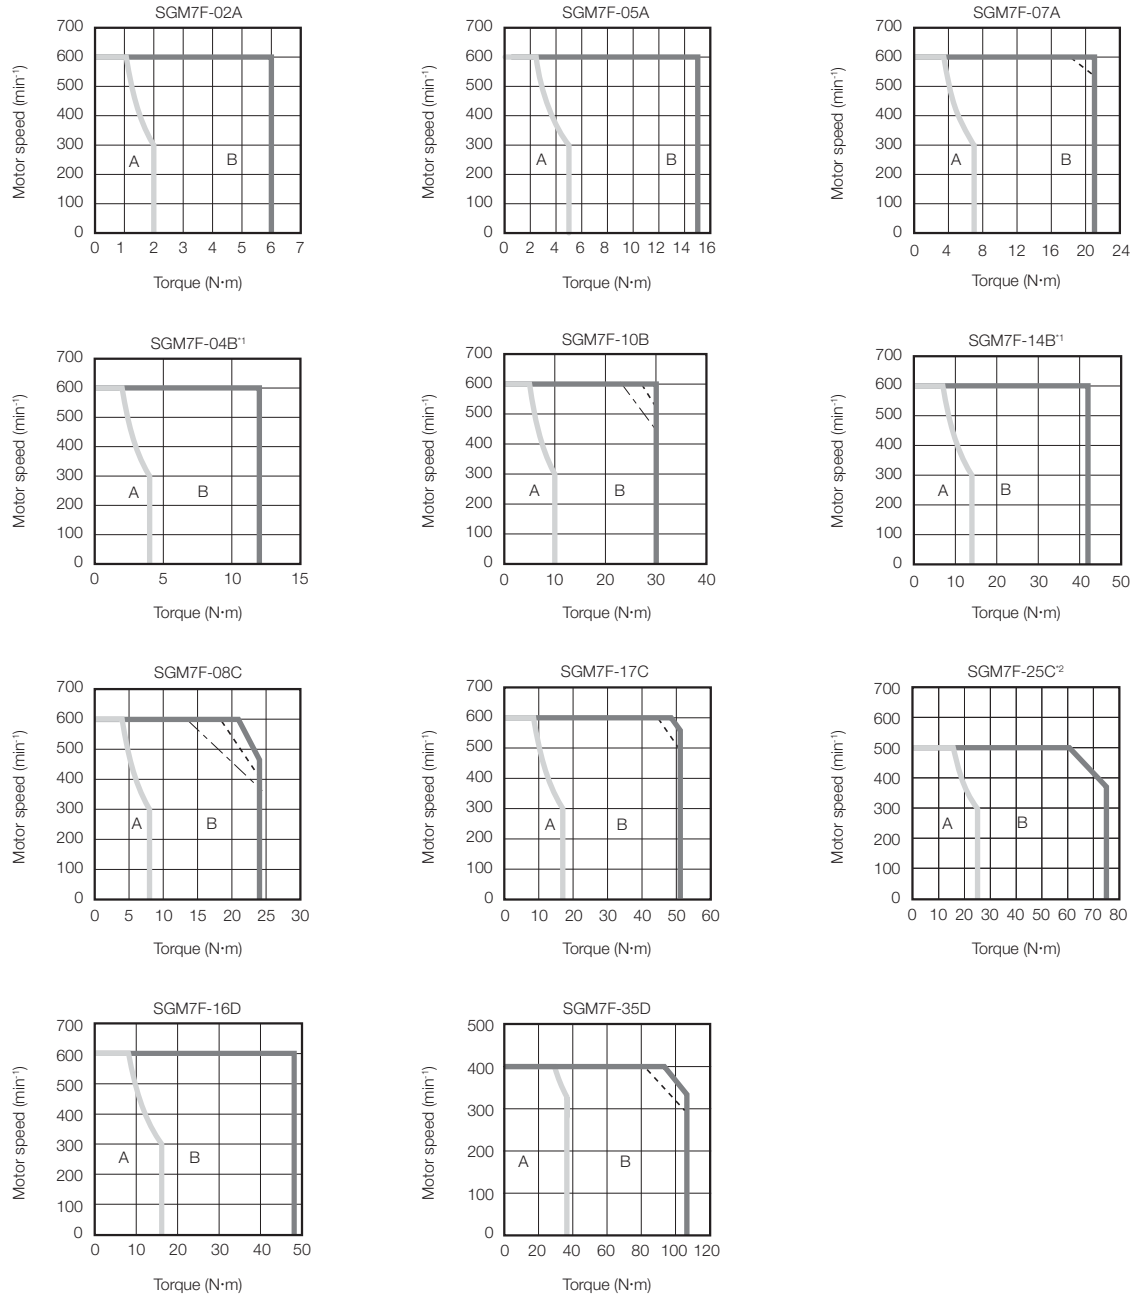

Where F is the external force,
Thrust load = Load mass
Moment load = F × L

*5. If you use an SGD7S-7R6A SERVOPACK and SGM7F-35D Servomotor together, use this value (a derated value).

Note: For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Torque-Motor Speed Characteristics

A : Continuous duty zone ——— (solid lines): With three-phase 200-V or single-phase 230-V input
B : Intermittent duty zone - - - - - (dotted lines): With single-phase 200-V input
 - · - · - (dashed-dotted lines): With single-phase 100-V input

*1. The characteristics are the same for three-phase 200 V, single-phase 200 V, and single-phase 100 V.

*2. Contact your Yaskawa representative for information on the SGM7F-25C.

Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.

2. The characteristics in the intermittent duty zone depend on the power supply voltage.

3. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Torque-Motor Speed Characteristics* on page 177.

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Ratings* (page 176). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

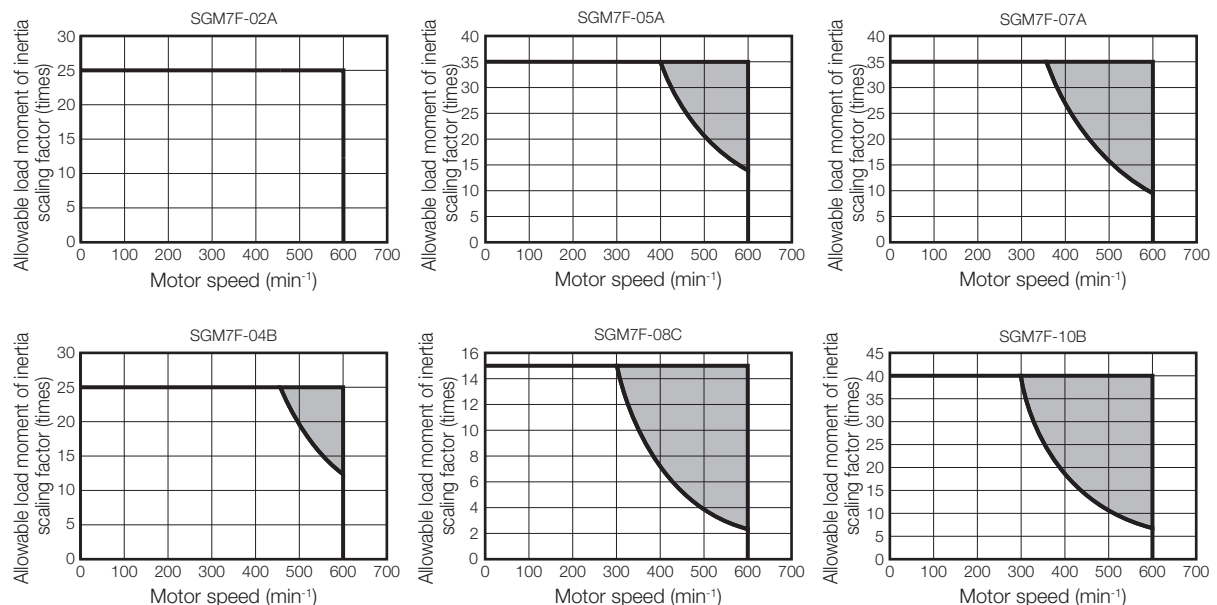

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVOPACKs.
Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-2R8A and -2R8F

◆ When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

External Regenerative Resistors (page 506)

Specifications and Ratings: Medium Capacity

Specifications

		SGD7C-						

*1. A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

*2. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

	Allowable Moment Load	N·m	180			350	

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

*3. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,
Thrust load = F + Load mass
Moment load = 0

Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L

Where F is the external force,
Thrust load = Load mass
Moment load = F × (L + A)

Note: For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Torque-Motor Speed Characteristics

 : Continuous duty zone

 : Intermittent duty zone

- Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.
2. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
3. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Torque-Motor Speed Characteristics* on page 182.

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Ratings* (page 181). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVO-PACKs.

Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

 *External Regenerative Resistors* (page 506)

Note: The above table shows combinations of the rated torque and outer diameter. The fourth through seventh digits have been omitted.

Specifications and Ratings

Specifications

Voltage			200 V								
Model SGMCV-			04B	10B	14B	08C	17C	25C	16D	35D	
Time Rating			Continuous								
Thermal Class			A								
Insulation Resistance			500 VDC, 10 MΩ min.								
Withstand Voltage			1,500 VAC for 1 minute								
Excitation			Permanent magnet								
Mounting			Flange-mounted								
Drive Method			Direct drive								
Rotation Direction			Counterclockwise (CCW) for forward reference when viewed from the load side								
Vibration Class* ¹			V15								
Absolute Accuracy			±15 s								
Repeatability			±1.3 s								
Protective Structure* ²			Totally enclosed, self-cooled, IP42								
Environmental Conditions	Surrounding Air Temperature		0°C to 40°C (with no freezing)								
	Surrounding Air Humidity		20% to 80% relative humidity (with no condensation)								
	Installation Site		<ul style="list-style-type: none">• Must be indoors and free of corrosive and explosive gases.• Must be well-ventilated and free of dust and moisture.• Must facilitate inspection and cleaning.• Must have an altitude of 1,000 m or less.• Must be free of strong magnetic fields.								
	Storage Environment		Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)								
Mechanical Tolerances* ³	Runout of Output Shaft Surface		mm	0.02 (0.01 for high machine precision option)							
	Runout at End of Output Shaft		mm	0.04 (0.01 for high machine precision option)							
	Parallelism between Mounting Surface and Output Shaft Surface		mm	0.07							
	Concentricity between Output Shaft and Flange Outer Diameter		mm	0.07							
Shock Resistance* ⁴		Impact Acceleration Rate at Flange		490 m/s ²							
		Number of Impacts		2 times							
Vibration Resistance* ⁴		Vibration Acceleration Rate at Flange		49 m/s ²							
Applicable SERVOPACKs			SGD7S-	2R8A, 2R8F		5R5A	2R8A, 2R8F	5R5A	7R6A	5R5A	7R6A* ⁵ , 120A
			SGD7W-SGD7C-	2R8A			2R8A				7R6A* ⁵

*1. A vibration class of V15 indicates a vibration amplitude of 15 μ m maximum on the Servomotor without a load at the rated motor speed.

*2. The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded. Protective structure specifications apply only when the special cable is used.

*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures. The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

*5. Use derated values for this combination. Refer to the following section for information on derating values.

 **Ratings (page 198)**

Heat Sink Size	mm	350 × 350 × 12			450 × 450 × 12			550 × 550 × 12	
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)		25 times	40 times	45 times	15 times	25 times	25 times	10 times	15 times
With External Regenerative Resistor and External Dynamic Brake Resistor ^{*3}		25 times	40 times	45 times	15 times	25 times	25 times	10 times	15 times
Allowable Load ^{*4}	Allowable Thrust Load	N	1500			3300			4000
	Allowable Moment Load	N·m	45	55	65	92	98	110	210 225

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

*4. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,
Thrust load = F + Load mass
Moment load = 0

Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L

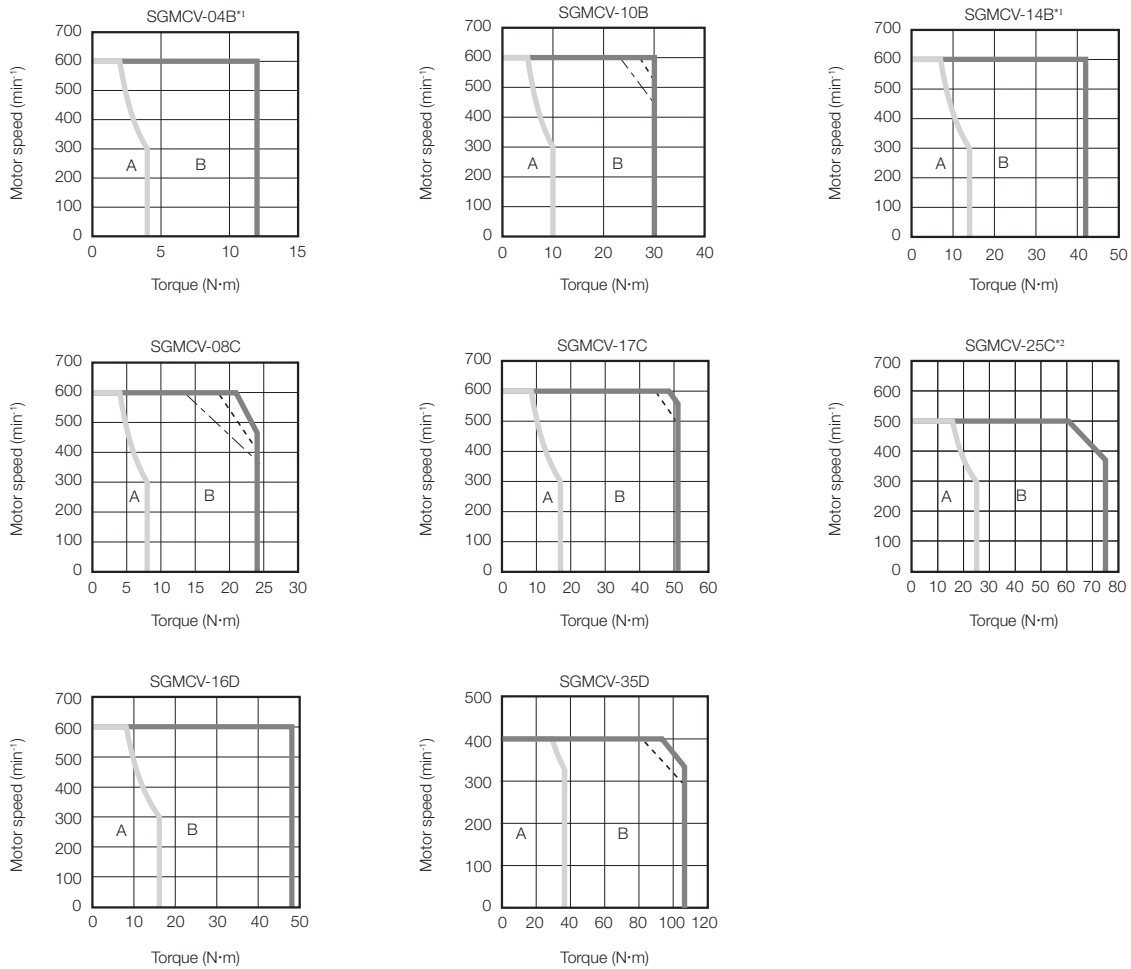

Where F is the external force,
Thrust load = Load mass
Moment load = F × L

*5. If you use an SGD7S-7R6A SERVOPACK and SGMCV-35D Servomotor together, use this value (a derated value).

Note: For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Torque-Motor Speed Characteristics

- A** : Continuous duty zone — (solid lines): With three-phase 200-V or single-phase 230-V input
B : Intermittent duty zone - - - (dotted lines): With single-phase 200-V input
 - - - (dashed-dotted lines): With single-phase 100-V input

*1. The characteristics are the same for three-phase 200 V, single-phase 200 V, and single-phase 100 V.

*2. Contact your Yaskawa representative for information on the SGMCV-25C.

Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.

2. The characteristics in the intermittent duty zone depend on the power supply voltage.

3. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Torque-Motor Speed Characteristics* on page 199.

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Ratings* (page 198). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVOPACKs.

Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-2R8A and -2R8F

◆ When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

External Regenerative Resistors (page 506)

🔌 Connector Specifications (page 205)

Connector Specifications

◆ Flange Specification 1

• Servomotor Connector

1	Phase U
2	Phase V
3	Phase W
4	FG (frame ground)

Model: JN1AS04MK2R
Manufacturer: Japan Aviation Electronics Industry, Ltd.

Mating connector: JN1DS04FK1
(Not provided by Yaskawa.)

• Encoder Connector

1	PS
2	/PS
3	—
4	PG5V
5*	BAT0
6	—
7	FG (frame ground)
8*	BAT
9	PG0V
10	—

* Only absolute-value models with multiturn data.

Model: JN1AS10ML1-R
Manufacturer: Japan Aviation Electronics Industry, Ltd.

Mating connector: JN1DS10SL1
(Not provided by Yaskawa.)

◆ Flange Specification 4

• Servomotor Connector

1	Phase U	Red
2	Phase V	White
3	Phase W	Blue
4	FG (frame ground)	Green (yellow)

Models

- Plug: 350779-1
 - Pins: 350561-3 or 350690-3 (No.1 to 3)
 - Ground pin: 350654-1 or 350669-1 (No. 4)
- Manufacturer: Tyco Electronics Japan G.K.

Mating Connector

- Cap: 350780-1
- Socket: 350570-3 or 350689-3

• Encoder Connector

1	PG5V
2	PG0V
3*	BAT
4*	BAT0
5	PS
6	/PS
Connector case	FG (frame ground)

* Only absolute-value models with multiturn data.

Model: 55102-0600
Manufacturer: Molex Japan LLC

Mating connector: 54280-0609

Selecting Cables

◆ Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

Encoder Cable of 20 m or Less

Encoder Cable of 30 m to 50 m (Relay Cable)

- Note: 1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
 2. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.
 3. Refer to the following manual for the following information.
- Cable dimensional drawings and cable connection specifications
 - Order numbers and specifications of individual connectors for cables
 - Order numbers and specifications for wiring materials
- 📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

◆ Servomotor Main Circuit Cables

Specifications and Ratings

Small-Capacity, Coreless Servomotors: Specifications

Voltage			200 V										
Model SGMCS-			02B	05B	07B	04C	10C	14C	08D	17D	25D	16E	35E
Time Rating			Continuous										
Thermal Class			A										
Insulation Resistance			500 VDC, 10 MΩ min.										
Withstand Voltage			1,500 VAC for 1 minute										
Excitation			Permanent magnet										
Mounting			Flange-mounted										
Drive Method			Direct drive										
Rotation Direction			Counterclockwise (CCW) for forward reference when viewed from the load side										
Vibration Class* ¹			V15										
Absolute Accuracy			±15 s										
Repeatability			±1.3 s										
Protective Structure* ²			Totally enclosed, self-cooled, IP42										
Environmental Conditions	Surrounding Air Temperature		0°C to 40°C (with no freezing)										
	Surrounding Air Humidity		20% to 80% relative humidity (with no condensation)										
	Installation Site		<ul style="list-style-type: none">• Must be indoors and free of corrosive and explosive gases.• Must be well-ventilated and free of dust and moisture.• Must facilitate inspection and cleaning.• Must have an altitude of 1,000 m or less.• Must be free of strong magnetic fields.										
	Storage Environment		Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)										
Mechanical Tolerances* ³	Runout of Output Shaft Surface	mm	0.02										
	Runout at End of Output Shaft	mm	0.04										
	Parallelism between Mounting Surface and Output Shaft Surface	mm	0.07						0.08				
	Concentricity between Output Shaft and Flange Outer Diameter	mm	0.07						0.08				
Shock Resistance* ⁴		Impact Acceleration Rate at Flange	490 m/s ²										
		Number of Impacts	2 times										
Vibration Resistance* ⁴		Vibration Acceleration Rate at Flange	49 m/s ²										
Applicable SERVOPACKs		SGD7S-	2R8A, 2R1F			2R8A, 2R8F					5R5A		
		SGD7W-SGD7C-	2R8A										

*1. A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

*2. The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded. Protective structure specifications apply only when the special cable is used.

*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

Small-Capacity, Coreless Servomotors: Ratings

Voltage			200 V										
Model SGMCS-			02B	05B	07B	04C	10C	14C	08D	17D	25D	16E	35E
Rated Output ^{*1}	W		42	105	147	84	209	293	168	356	393	335	550
Rated Torque ^{*1, *2}	N·m		2.00	5.00	7.00	4.00	10.0	14.0	8.00	17.0	25.0	16.0	35.0
Instantaneous Maximum Torque ^{*1}	N·m		6.00	15.0	21.0	12.0	30.0	42.0	24.0	51.0	75.0	48.0	105
Stall Torque ^{*1}	N·m		2.05	5.15	7.32	4.09	10.1	14.2	8.23	17.4	25.4	16.5	35.6
Rated Current ^{*1}	Arms		1.8	1.7	1.4	2.2		2.8	1.9	2.5	2.6	3.3	3.5
Instantaneous Maximum Current ^{*1}	Arms		5.4	5.1	4.1	7.0		8.3	5.6	7.5	8.0	9.4	10.0
Rated Motor Speed ^{*1}	min ⁻¹		200			200			200		150	200	150
Maximum Motor Speed ^{*1}	min ⁻¹		500			500	400	300	500	350	250	500	250
Torque Constant	N·m/Arms		1.18	3.17	5.44	2.04	5.05	5.39	5.10	7.79	10.8	5.58	11.1
Motor Moment of Inertia	×10 ⁻⁴ kg·m ²		28.0	51.0	77.0	77.0	140	220	285	510	750	930	1430
Rated Power Rate ^{*1}	kW/s		1.43	4.90	6.36	2.08	7.14	8.91	2.25	5.67	8.33	2.75	8.57
Rated Angular Acceleration Rate ^{*1}	rad/s ²		710	980	910	520	710	640	280	330		170	240
Heat Sink Size	mm		350 × 350 × 12			450 × 450 × 12			550 × 550 × 12			650 × 650 × 12	
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)			10 times				5 times	3 times					
	With External Regenerative Resistor and External Dynamic Brake Resistor ^{*3}		10 times				5 times	3 times					
Allowable Load ^{*4}	Allowable Thrust Load	N	1500			3300			4000			11000	
	Allowable Moment Load	N·m	40	50	64	70	75	90	93	103	135	250	320

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

*4. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,
Thrust load = F + Load mass
Moment load = 0

Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L

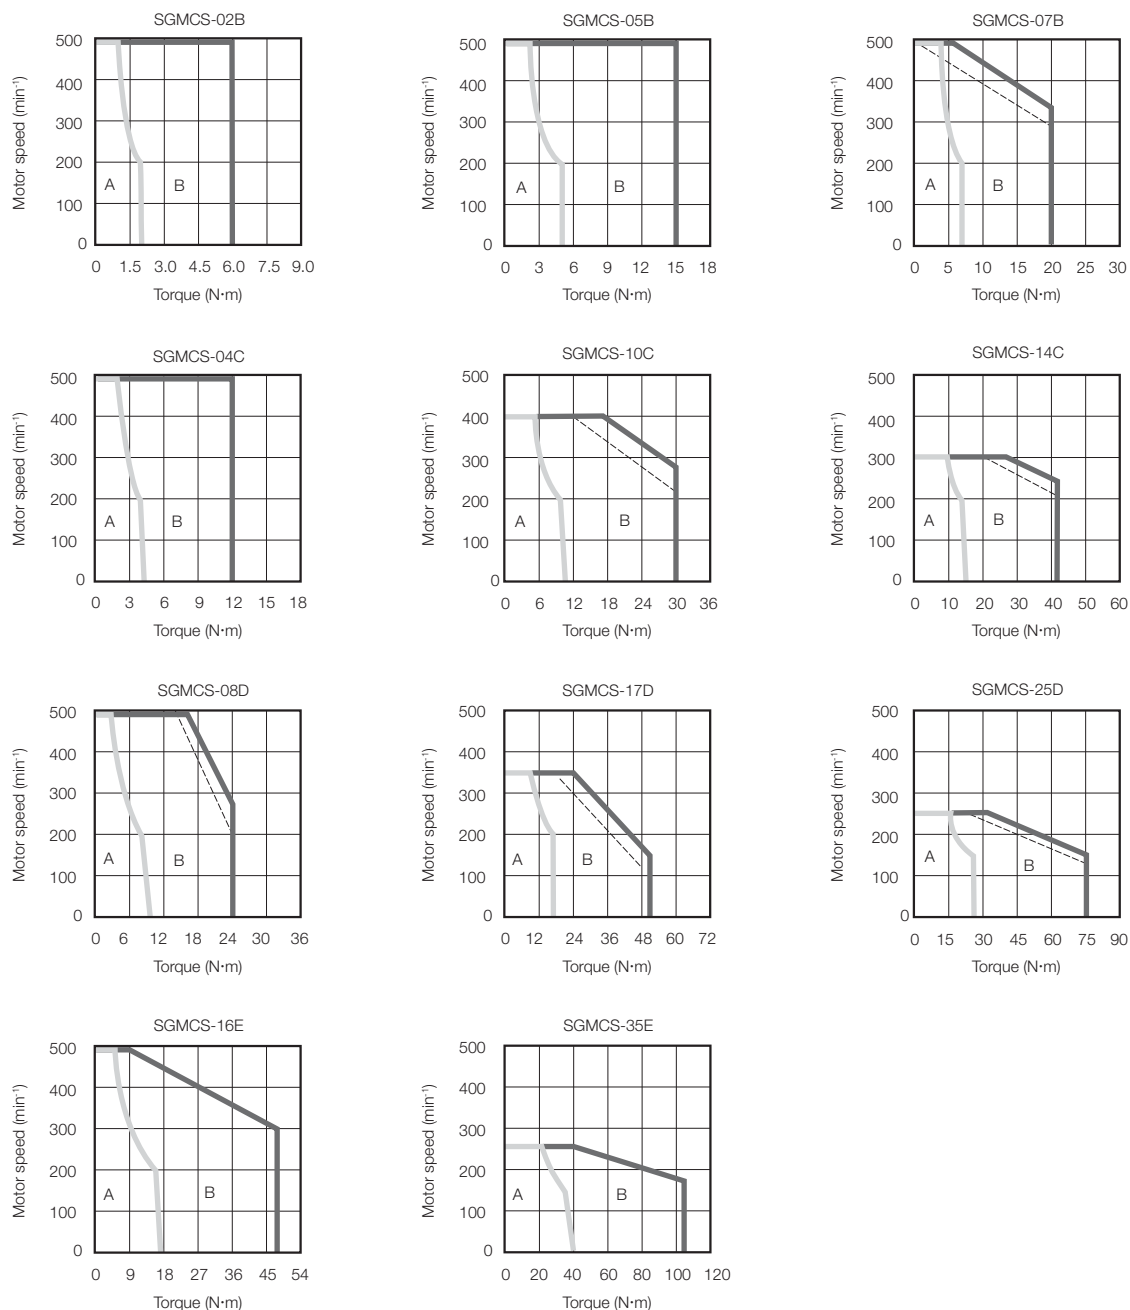

Where F is the external force
Thrust load = Load mass
Moment load = F × L

Note: For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Small-Capacity, Coreless Servomotors: Torque-Motor Speed Characteristics

A : Continuous duty zone — (solid lines): With three-phase 200-V input
B : Intermittent duty zone - - - (dotted lines): With single-phase 100-V input

- Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Small-Capacity, Coreless Servomotors: Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Small-Capacity, Coreless Servomotors: Torque-Motor Speed Characteristics* on page 213.

Medium-Capacity Servomotors with Cores: Specifications

Voltage			200 V					
Model SGMCS-			45M	80M	1AM	80N	1EN	2ZN
Time Rating			Continuous					
Thermal Class			F					
Insulation Resistance			500 VDC, 10 MΩ min.					
Withstand Voltage			1,500 VAC for 1 minute					
Excitation			Permanent magnet					
Mounting			Flange-mounted					
Drive Method			Direct drive					
Rotation Direction			Counterclockwise (CCW) for forward reference when viewed from the load side					
Vibration Class*1			V15					
Absolute Accuracy			±15 s					
Repeatability			±1.3 s					
Protective Structure*2			Totally enclosed, self-cooled, IP44					
Environmental Conditions	Surrounding Air Temperature		0°C to 40°C (with no freezing)					
	Surrounding Air Humidity		20% to 80% relative humidity (with no condensation)					
	Installation Site		<ul style="list-style-type: none">• Must be indoors and free of corrosive and explosive gases.• Must be well-ventilated and free of dust and moisture.• Must facilitate inspection and cleaning.• Must have an altitude of 1,000 m or less.• Must be free of strong magnetic fields.					
	Storage Environment		Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)					
Mechanical Tolerances*3	Runout of Output Shaft Surface	mm	0.02					
	Runout at End of Output Shaft	mm	0.04					
	Parallelism between Mounting Surface and Output Shaft Surface	mm	—					
	Concentricity between Output Shaft and Flange Outer Diameter	mm	0.08					
	Perpendicularity between Mounting Surface and Output Shaft	mm	0.08					
Shock Resistance*4		Impact Acceleration Rate at Flange	490 m/s ²					
		Number of Impacts	2 times					
Vibration Resistance*4		Vibration Acceleration Rate at Flange	24.5 m/s ²					
Applicable SERVOPACKs			SGD7S-	7R6A	120A	180A	120A	200 A
			SGD7W-SGD7C-	7R6A	—			

*1. A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

*2. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

Medium-Capacity Servomotors with Cores: Ratings

Voltage		200 V					
Model SGMCS-		45M	80M	1AM	80N	1EN	2ZN
Rated Output ^{*1}	W	707	1260	1730	1260	2360	3140
Rated Torque ^{*1, *2}	N·m	45.0	80.0	110	80.0	150	200
Instantaneous Maximum Torque ^{*1}	N·m	135	240	330	240	450	600
Stall Torque ^{*1}	N·m	45.0	80.0	110	80.0	150	200
Rated Current ^{*1}	Arms	5.8	9.7	13.4	9.4	17.4	18.9

Rated Motor Speed ^{*1}	min ⁻¹	150			150		
Maximum Motor Speed ^{*1}	min ⁻¹	300			300	250	
Torque Constant	N·m/Arms	8.39	8.91	8.45	9.08	9.05	11.5
Motor Moment of Inertia	×10 ⁻⁴ kg·m ²	388	627	865	1360	2470	3060
Rated Power Rate ^{*1}	kW/s	52.2	102	140	47.1	91.1	131
Rated Angular Acceleration Rate ^{*1}	rad/s ²	1160	1280	1270	588	607	654
Heat Sink Size	mm	750 × 750 × 45					
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)		3 times					
With External Regenerative Resistor and External Dynamic Brake Resistor		3 times					
Allowable Load ^{*3}	A	mm	33		37.5		
	Allowable Thrust Load	N	9000		16000		
	Allowable Moment Load	N·m	180		350		

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

*3. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,
Thrust load = F + Load mass
Moment load = 0

Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L

Where F is the external force,
Thrust load = Load mass
Moment load = F × (L + A)

Note: For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Medium-Capacity Servomotors with Cores: Torque-Motor Speed Characteristics

A : Continuous duty zone

B : Intermittent duty zone

Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.

2. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.

3. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Medium-Capacity Servomotors with Cores: Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in *Medium-Capacity Servomotors with Cores: Torque-Motor Speed Characteristics* on page 217.

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the *Small-Capacity, Coreless Servomotors: Ratings* (page 212) and *Medium-Capacity Servomotors with Cores: Ratings* (page 216). The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your Yaskawa representative for information on this program.

◆ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

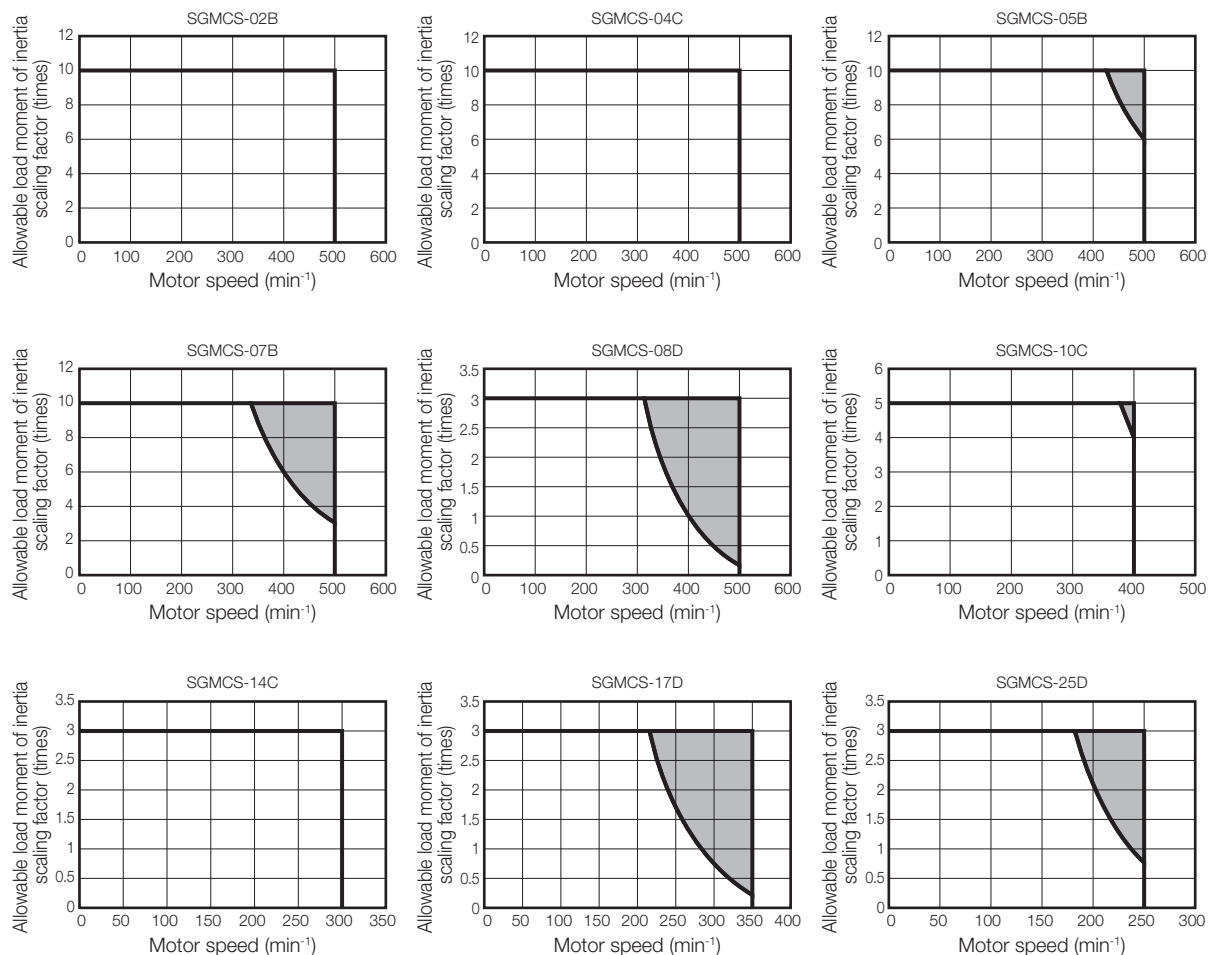

Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to *Built-In Regenerative Resistor* (page 506) for the regenerative power (W) that can be processed by the SERVO-PACKs.

Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

◆ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-2R8A and -2R8F

◆ When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

[External Regenerative Resistors](#) (page 506)

Refer to the following section for information on connectors.

🔌 Connector Specifications (page 227)

Connector Specifications

◆ SGMCS-□□B, -□□C, -□□D, or -□□E with Flange Specification 1

• Servomotor Connector

1	Phase U
2	Phase V
3	Phase W
4	FG (frame ground)

Model: JN1AS04MK2R
Manufacturer: Japan Aviation Electronics Industry, Ltd.

Mating connector: JN1DS04FK1
 (Not provided by Yaskawa.)

• Encoder Connector

1	PS
2	/PS
3	–
4	PG5V
5	–
6	–
7	FG (frame ground)
8	–
9	PG0V
10	–

Model: JN1AS10ML1-R
Manufacturer: Japan Aviation Electronics Industry, Ltd.

Mating connector: JN1DS10SL1
 (Not provided by Yaskawa.)

◆ SGMCS-□□B, -□□C, -□□D, or -□□E with Flange Specification 4

• Servomotor Connector

1	Phase U	Red
2	Phase V	White
3	Phase W	Blue
4	FG (frame ground)	Green (yellow)

Models

- Plug: 350779-1
- Pins: 350561-3 or 350690-3 (No.1 to 3)
- Ground pin: 350654-1 or 350669-1 (No. 4)
- Manufacturer:** Tyco Electronics Japan G.K.

Mating Connector

- Cap: 350780-1
- Socket: 350570-3 or 350689-3

• Encoder Connector

1	PG5V
2	PG0V
3	–
4	–
5	PS
6	/PS
Connector case	FG (frame ground)

Model: 55102-0600
Manufacturer: Molex Japan LLC

Mating connector: 54280-0609

◆ SGMCS-□□M or -□□N with Flange Specification 1 or 3

• Servomotor Connector

A	Phase U
B	Phase V
C	Phase W
D	FG (frame ground)

Model: CE05-2A18-10PD
Manufacturer: DDK Ltd.

Mating Connector

Plug: CE05-6A18-10SD-B-BSS
 Cable clamp: CE3057-10A-□(D265)

• Encoder Connector

1	PS
2	/PS
3	–
4	PG5V
5	–
6	–
7	FG (frame ground)
8	–
9	PG0V
10	–

Model: JN1AS10ML1
Manufacturer: Japan Aviation Electronics Industry, Ltd.

Mating connector: JN1DS10SL1
 (Not provided by Yaskawa.)

Selecting Cables

◆ Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

Encoder Cable of 20 m or Less

Encoder Cable of 30 m to 50 m (Relay Cable)

- Note: 1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
2. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.
3. Refer to the following manual for the following information.
- Cable dimensional drawings and cable connection specifications
 - Order numbers and specifications of individual connectors for cables
 - Order numbers and specifications for wiring materials

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

◆ Servomotor Main Circuit Cables

Servomotor Model	Length (L)	Order Number		Appearance

		40 m	JZSP-UCMP00-40-E	
		50 m	JZSP-UCMP00-50-E	

*1. Flexible Cables are not available.

*2. Refer to the following section for the flange specifications.

 **Model Designations** (page 210)

Linear Servomotors

■ Features

SGLG (Coreless Models) 232

- Lack of magnetic attraction force helps extend the life of linear motion guides and minimizes noise.
- Zero cogging for minimal force ripple.

SGLFW2 (Models with F-type Iron Cores) 256

- Large magnetic attraction force between the moving and stationary members can be used to effectively increase rigidity by preloading the linear guide.
- Magnetic preloading on the linear guide can help increase the system's frequency response, improving its damping and settling performances.

SGLT (Models with T-type Iron Cores) 280

- Negates the effects of the magnetic attraction force between the relative motor members.
- Very little cogging.

405	405 mm
432	432 mm
450	450 mm
504	504 mm

9th digit Options

Code	Specification	Applicable Models
None	Standard-force	All models
-M	High-force	SGLGM-40, -60

8th digit Design Revision Order

A, B, C*...

* The SGLGM-40 and SGLGM-60 also have a CT code.

- C = Without mounting holes on the bottom
- CT = With mounting holes on the bottom

Note: This information is provided to explain model numbers. It is not meant to imply that models are available for all combinations of codes.

Precautions on Moving Coils with Polarity Sensors

Note

When you use a Moving Coil with a Polarity Sensor, the Magnetic Way must cover the bottom of the polarity sensor. Refer to the example that shows the correct installation. When determining the length of the Moving Coil's stroke or the length of the Magnetic Way, consider the total length (L) of the Moving Coil and the polarity sensor. Refer to the following table.

Correct Installation

Incorrect Installation

◆ Total Length of Moving Coil with Polarity Sensor

Moving Coil Model SGLGW-	Length of Moving Coil, L1 [mm]	Length of Polarity Sensor, A [mm]	Total Length, L [mm]

Applicable SERVOPACKs	SGD7S-	R70A, R70F	R90A, R90F		1R6A, 2R1F	2R8A, 2R8F	1R6A, 2R1F	2R8A, 2R8F	5R5A	120A	180A	200A
	SGD7W-SGD7C-	1R6A				2R8A	1R6A	2R8A	5R5A	—		

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated forces are the continuous allowable force values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

• Heat Sink Dimensions

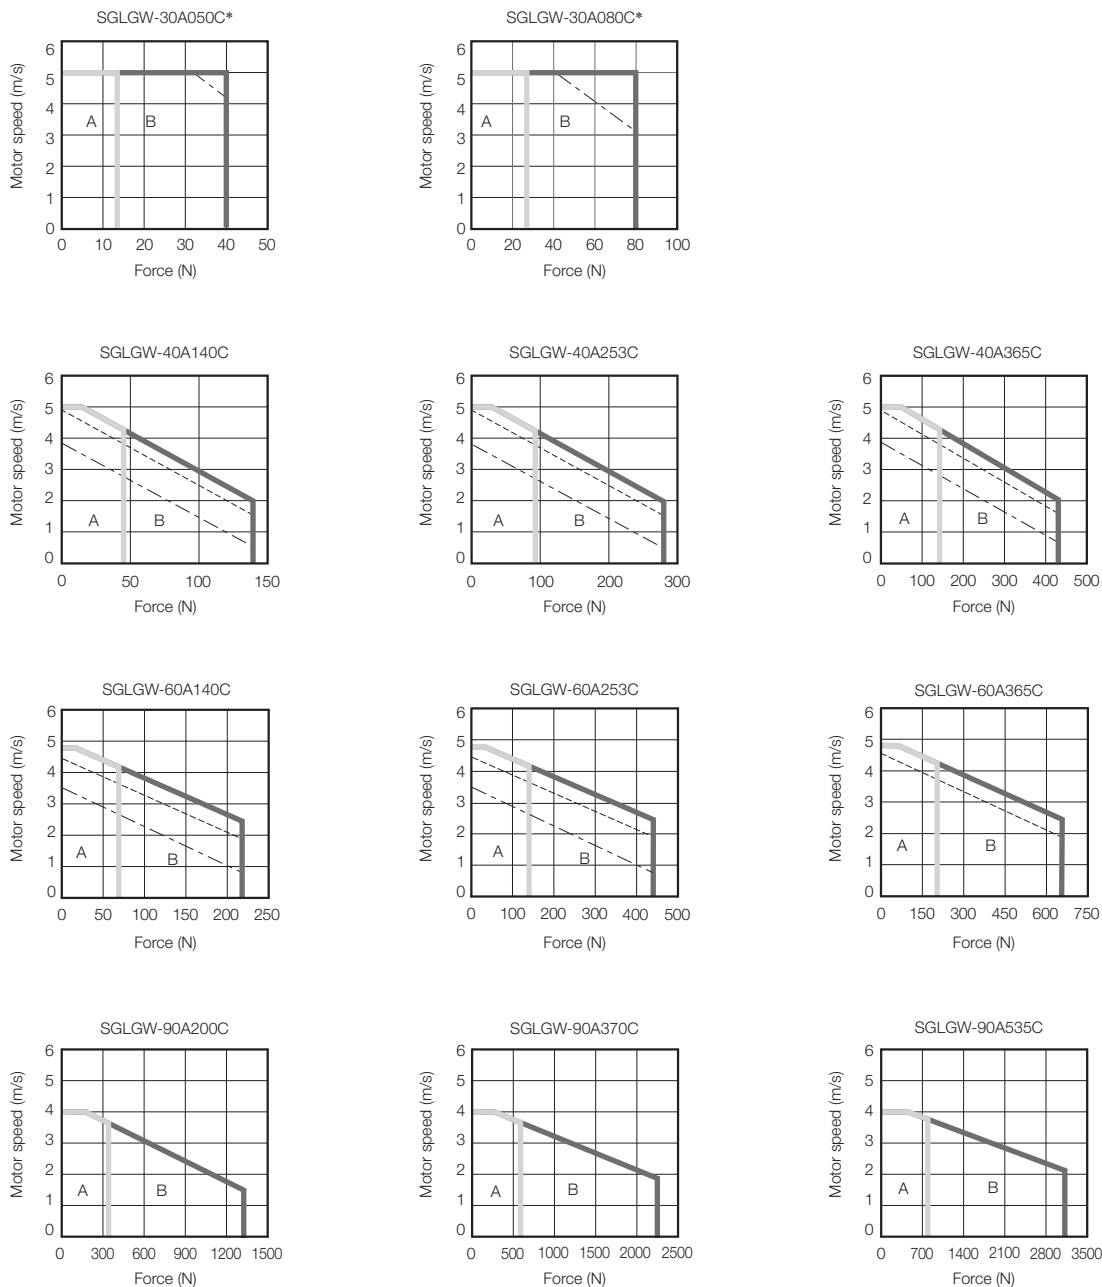

- 200 mm × 300 mm × 12 mm: SGLGW-30A050C, -30A080C, -40A140C, and -60A140C
- 300 mm × 400 mm × 12 mm: SGLGW-40A253C and -60A253C
- 400 mm × 500 mm × 12 mm: SGLGW-40A365C and -60A365C
- 800 mm × 900 mm × 12 mm: SGLGW-90A200C, -90A370C, and -90A535C

*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

Force-Motor Speed Characteristics

- A** : Continuous duty zone ——— (solid lines): With three-phase 200-V input
B : Intermittent duty zone - - - - - (dotted lines): With single-phase 200-V input
 - · - · - (dashed-dotted lines): With single-phase 100-V input

* The characteristics are the same for three-phase 200 V and single-phase 200 V.

Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.

2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in *Force-Motor Speed Characteristics* on page 236.

Magnetic Attraction	N	0	0	0	0	0	0
Maximum Allowable Payload	kg	12	24	58	18	61	91
Maximum Allowable Payload (With External Regenerative Resistor and External Dynamic Brake Resistor* ³)	kg	12	24	58	18	61	91
Combined Magnetic Way, SGLGM-		40□□□□-M			60□□□□-M		
Combined Serial Converter Unit, JZDP-□□□□-		255	256	257	261	262	263
Applicable SERVOPACKs	SGD7S-	1R6A, 2R1F	2R8A, 2R8F	3R8A	1R6A, 2R1F	3R8A	7R6A
	SGD7W-SGD7C-	1R6A	2R8A	5R5A	1R6A	5R5A	7R6A

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated forces are the continuous allowable force values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

- Heat Sink Dimensions
 - 200 mm × 300 mm × 12 mm: SGLGW-40A140C and -60A140C
 - 300 mm × 400 mm × 12 mm: SGLGW-40A253C and -60A253C
 - 400 mm × 500 mm × 12 mm: SGLGW-40A365C and -60A365C

*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

Force-Motor Speed Characteristics

- A** : Continuous duty zone ————— (solid lines): With three-phase 200-V input
B : Intermittent duty zone - - - - - (dotted lines): With single-phase 200-V input
 — — — (dashed-dotted lines): With single-phase 100-V input

- Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

- Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in *Force-Motor Speed Characteristics* on page 240.

Selecting Cables

◆ Cable Configurations

To select a Linear Encoder, use *Recommended Linear Encoders* (pages 306 to 308). Prepare the cable required for the encoder.

* You can connect directly to an absolute linear encoder.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

Precautions on Moving Coils with Polarity Sensors

Note

When you use a Moving Coil with a Polarity Sensor, the Magnetic Way must cover the bottom of the polarity sensor. Refer to the example that shows the correct installation. When determining the length of the Moving Coil's stroke or the length of the Magnetic Way, consider the total length (L) of the Moving Coil and the polarity sensor. Refer to the following table.

Correct Installation

Incorrect Installation

◆ Total Length of Moving Coil with Polarity Sensor

Moving Coil Model SGLFW2-	Length of Moving Coil, L1 [mm]	Length of Polarity Sensor, A [mm]	Total Length, L [mm]
30A070AS	70	29	97
30A120AS	125		152
30A230AS	230		257
45A200AS	205	34	237
45A380AS	384		416
90A200AS	205		237
90A380AS	384	34	416
90A560AS	563		595
1DA380AS	384	32	416
1DA560AS	563		595

*2. The rated forces are the continuous allowable force values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

- Heat Sink Dimensions
 - 400 mm × 500 mm × 25 mm: SGLFW2-90A200A
 - 609 mm × 762 mm × 40 mm: SGLFW2-90A380A
 - 900 mm × 762 mm × 40 mm: SGLFW2-90A560A and -1DA380A
 - 1,400 mm × 900 mm × 40 mm: SGLFW2-1DA560A

Force-Motor Speed Characteristics

A : Continuous duty zone (solid lines): With three-phase 200-V input
B : Intermittent duty zone (dotted lines): With single-phase 200-V input
 (dashed-dotted lines): With single-phase 100-V input

- Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
 2. The characteristics in the intermittent duty zone depend on the power supply voltage.
 3. If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
 4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in *Force-Motor Speed Characteristics* on page 261.

Selecting Cables

◆ Cable Configurations

To select a Linear Encoder, use *Recommended Linear Encoders* (pages 306 to 308). Prepare the cable required for the encoder.

* You can connect directly to an absolute linear encoder.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

Precautions on Moving Coils with Polarity Sensors

Note

When you use a Moving Coil with a Polarity Sensor, the Magnetic Way must cover the bottom of the polarity sensor. Refer to the example that shows the correct installation.
When determining the length of the Moving Coil's stroke or the length of the Magnetic Way, consider the total length of the Moving Coil and the polarity sensor. Refer to the following table.

Correct Installation

Incorrect Installation

◆ Total Length of Moving Coil with Polarity Sensor

Moving Coil Model SGLTW-	Length of Moving Coil, L1 [mm]	Length of Polarity Sensor, A [mm]	Total Length, L [mm]

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated forces are the continuous allowable force values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

- Heat Sink Dimensions
 - 254 mm × 254 mm × 25 mm: SGLTW-20A170A and -35A170A
 - 400 mm × 500 mm × 40 mm: SGLTW-20A320A, -20A460A, -35A170H, -35A320A, -35A320H, -35A460A, and -50A170H
 - 609 mm × 762 mm × 50 mm: SGLTW-40A400B, -40A600B, -50A320H, -80A400B, and -80A600B

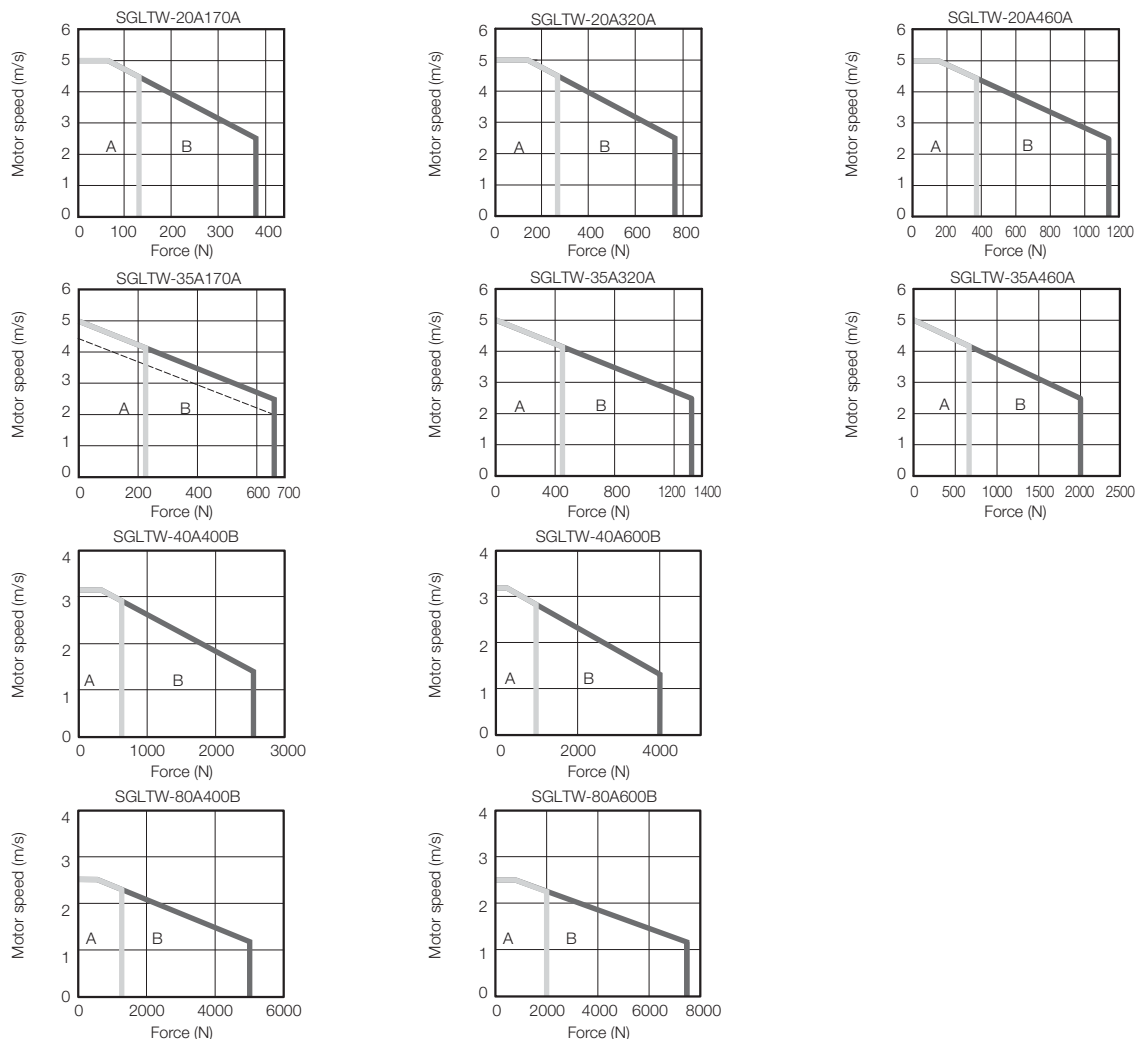

*3. The unbalanced magnetic gap that results from the Moving Coil installation condition causes a magnetic attraction on the Moving Coil.

*4. The value that is given is the magnetic attraction that is generated on one side of the Magnetic Way.

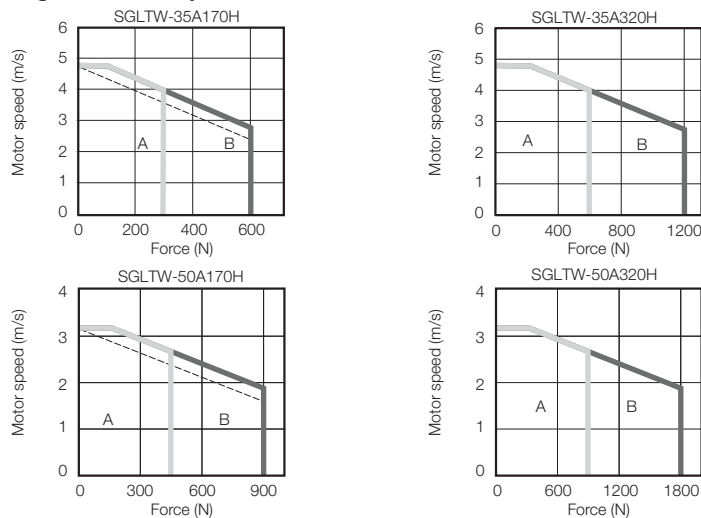

Force-Motor Speed Characteristics

 : Continuous duty zone — (solid lines): With three-phase 200-V input
 : Intermittent duty zone - - - (dotted lines): With single-phase 200-V input

Standard Models

High-efficiency Models

- Note: 1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
 2. The characteristics in the intermittent duty zone depend on the power supply voltage.
 3. If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
 4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in *Force-Motor Speed Characteristics* on page 284.

SGLTW-40: Standard Models

◆ Moving Coils: SGLTW-40A□□□B□

Moving Coil Model SGLTW-	L1	L2	(L3)	N	Approx. Mass [kg]
40A400B□	394.2	360 (60 × 6)	(15)	14	15
40A600B□	574.2	540 (60 × 9)	(15)	20	22

■ Connector Specifications

• Servomotor Connector

A	Phase U
B	Phase V
C	Phase W
D	Ground

Receptacle: MS3102A-22-22P
From DDK Ltd.

Mating Connector

Right-angle plug: MS3108B22-22S
Straight plug: MS3106B22-22S
Cable clamp: MS3057-12A

• Polarity Sensor Connector

1	+5 V (power supply)	6	Not used
2	Phase U	7	
3	Phase V	8	
4	Phase W	9	
5	0 V (power supply)	—	—

Pin connector: 17JE-23090-02 (D8C)-CG
From DDK Ltd.

Mating Connector

Socket connector: 17JE-13090-02 (D8C)A-CG
Studs: 17L-002C or 17L-002C1

■ Polarity Sensor Output Signal

The figure on the right shows the relationship between the S_u , S_v , and S_w polarity sensor output signals and the inverse power of each motor phase V_u , V_v , and V_w when the Moving Coil moves in the direction indicated by the arrow in the dimensional drawings of the Moving Coil.

◆ Magnetic Ways: SGLTM-40□□□A□

- Note: 1. Two Magnetic Way tracks are used together as a set. For safety, when they are shipped, the two tracks are secured to a mounting spacer made from aluminum.
2. More than one Magnetic Way can be connected.
3. Dimensions with asterisks are the distances between the Magnetic Way tracks. Install the tracks according to the specified dimensions. Observe the dimensions given in *Mounting Section Details* after installation.
- Dimensions when the Magnetic Way is shipped from the factory are indicated by ♣.
4. Use socket head screws of strength class 10.9 or higher for the Magnetic Way mounting screws. (Do not use stainless steel screws.)

Magnetic Way Model SGLTM-	L1	L2	LA	LB	LC	LD	N	Approx. Mass [kg]
40405A□	405 ^{-0.1} _{-0.3}	337.5 (67.5 × 5)	37.5 ⁰ _{-0.2}	15 ⁰ _{-0.2}	52.5 ⁰ _{-0.2}	100 ^{+0.6} ₀	6	9
40675A□	675 ^{-0.1} _{-0.3}	607.5 (67.5 × 9)	37.5 ⁰ _{-0.2}	15 ⁰ _{-0.2}	52.5 ⁰ _{-0.2}	100 ^{+0.6} ₀	10	15
40945A□	945 ^{-0.1} _{-0.3}	877.5 (67.5 × 13)	37.5 ⁰ _{-0.2}	15 ⁰ _{-0.2}	52.5 ⁰ _{-0.2}	100 ^{+0.6} ₀	14	21

◆ Magnetic Ways with Bases: SGLTM-40□□□AY

Note: Two Magnetic Way tracks are used together as a set. More than one Magnetic Way can be connected.

Magnetic Way Model SGLTM-	L1	L2	L3	L4	L5	N1	N2	Approx. Mass [kg]
40405AY	405 ^{-0.1 -0.3}	337.5	387.5	202.5	202.5	6	2	13
40675AY	675 ^{-0.1 -0.3}	607.5	657.5	472.5	236.25	10	3	21
40945AY	945 ^{-0.1 -0.3}	877.5	927.5	742.5	247.5	14	4	30

SGLTW-50: High-Efficiency Models

◆ Moving Coils: SGLTW-50A□□□H□

Moving Coil Model SGLTW-	L1	L2	(L3)	N	Approx. Mass [kg]
50A170H□	170	144 (48 × 3)	(16)	8	6
50A320H□	315	288 (48 × 6)	(17)	14	11

■ Connector Specifications

• Moving Coil Lead

Phase U	Red	U	2 mm ²
Phase V	White	V	
Phase W	Black	W	
Ground	Green	—	

Secure the lead from the Moving Coil of the Linear Servomotor so that it moves together with the Moving Coil.

• Polarity Sensor Connector

1	+5 V (DC)	6	Not used
2	Phase U	7	
3	Phase V	8	
4	Phase W	9	
5	0 V	—	—

Pin connector: 17JE-23090-02 (D8C)-CG
From DDK Ltd.

Mating Connector

Socket connector: 17JE-13090-02 (D8C)A-CG
Studs: 17L-002C or 17L-002C1

■ Polarity Sensor Output Signal

The figure on the right shows the relationship between the S_u , S_v , and S_w polarity sensor output signals and the inverse power of each motor phase V_u , V_v , and V_w when the Moving Coil moves in the direction indicated by the arrow in the dimensional drawings of the Moving Coil.

◆ Magnetic Ways: SGLTM-50□□□H□

- Note: 1. Two Magnetic Way tracks are used together as a set. For safety, when they are shipped, the two tracks are secured to a mounting spacer made from aluminum.
2. More than one Magnetic Way can be connected.
3. Dimensions with asterisks are the distances between the Magnetic Way tracks. Install the tracks according to the specified dimensions. Observe the dimensions given in *Mounting Section Details* after installation. Dimensions when the Magnetic Way is shipped from the factory are indicated by ♣.
4. Use socket head screws of strength class 10.9 or higher for the Magnetic Way mounting screws. (Do not use stainless steel screws.)

Magnetic Way Model SGLTM-	L1	L2	LA	LB	LC	LD	N	Approx. Mass [kg]
50324H□	324 ^{-0.1} _{-0.3}	270 (54 × 5)	27 ⁰ _{-0.2}	9 ⁰ _{-0.2}	45 ⁰ _{-0.2}	82 ^{+0.6} ₀	6	8
50540H□	540 ^{-0.1} _{-0.3}	486 (54 × 9)	27 ⁰ _{-0.2}	9 ⁰ _{-0.2}	45 ⁰ _{-0.2}	82 ^{+0.6} ₀	10	13
50756H□	756 ^{-0.1} _{-0.3}	702 (54 × 13)	27 ⁰ _{-0.2}	9 ⁰ _{-0.2}	45 ⁰ _{-0.2}	82 ^{+0.6} ₀	14	18

SGLTW-80: Standard Models

◆ Moving Coils: SGLTW-80A□□□□B□

Moving Coil Model SGLTW-	L1	L2	(L3)	N	Approx. Mass [kg]
80A400B□	394.2	360 (60 × 6)	(15)	14	24
80A600B□	574.2	540 (60 × 9)	(15)	20	35

Selecting Cables

◆ Cable Configurations

To select a Linear Encoder, use *Recommended Linear Encoders* (pages 306 and 307). Prepare the cable required for the encoder.

* You can connect directly to an absolute linear encoder.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

◆ Linear Servomotor Main Circuit Cables

Linear Servomotor Model	Length (L)	Order Number	Appearance

MEMO

Recommended Linear Encoders and Cables

Recommended Linear Encoders

Incremental Linear Encoders

◆ 1 Vp-p Analog Voltage

You must also use a Yaskawa Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the Serial Converter Unit.

Manufacturer	Linear Encoder Type	Model			Linear Encoder Pitch [μm]	Resolution [nm]	Maximum Speed*1 [m/s]	Support for Polarity Sensor Input	Application to Linear Servomotors	Application to Fully-Closed Loop Control	Reference
		Scale	Sensor Head	Relay Device between SERVOPACK and Linear Encoder*3

✓: Applicable

*1. The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a Yaskawa SERVOPACK. The actual speed will be restricted by either the maximum speed of the Linear Servomotor or the maximum speed of the Linear Encoder (given above).

*2. If you use the origin signals with a Linear Encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

*3. These are the models of Serial Converter Units.

*4. Contact your Yaskawa representative.

Note: Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the Linear Encoder before you use it.

◆ Encoder for Yaskawa's Serial Interface

The multiplier (number of divisions) depends on the Linear Encoder. Also, you must write the Servomotor constant file to the Linear Encoder in advance.

Connections to Linear Encoder from Dr. JOHANNES HEIDENHAIN GmbH

◆ Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a Yaskawa Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the Serial Converter Unit.

■ Connecting to a Linear Servomotor with a Polarity Sensor

*1. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

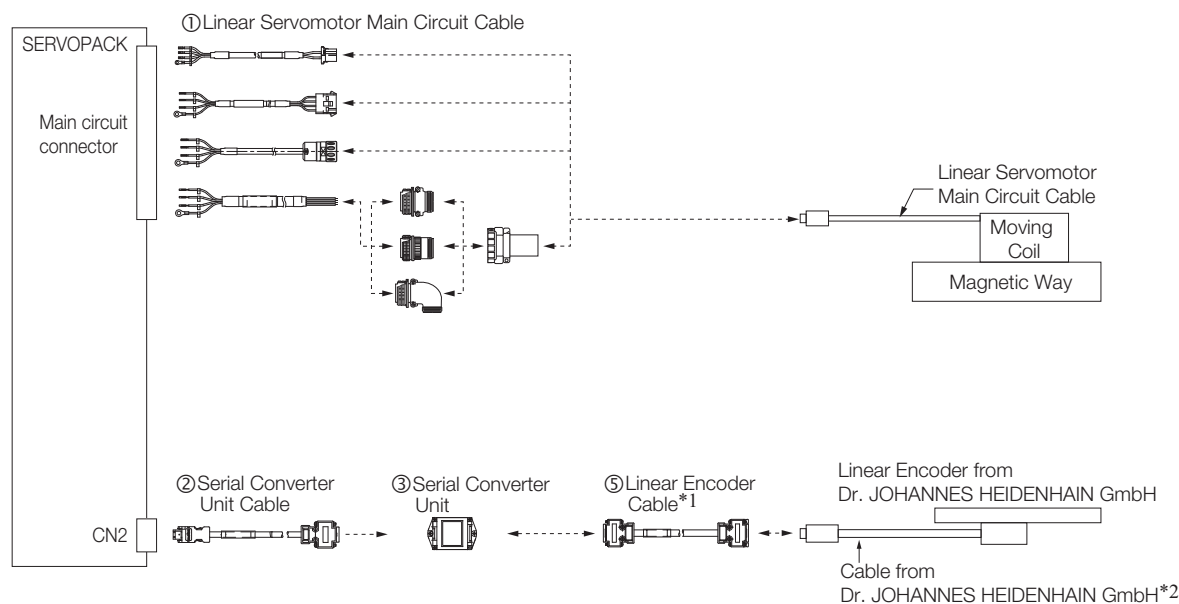

*2. When using a JZDP-J00□-□□□ Serial Converter Unit, do not use a Yaskawa Linear Encoder Cable that is longer than 3 m.

*3. Contact Dr. JOHANNES HEIDENHAIN GmbH for details on the cables (analog 1 Vp-p output, D-sub 15-pin, male).

No.	Cable Type	Reference		
		SGLG	SGLF	SGLT

②	Serial Converter Unit Cable	page 329		
③	Serial Converter Unit	page 328		
④	Sensor Cable	page 329		
⑤	Linear Encoder Cable	page 329		

■ Connecting to a Linear Servomotor without a Polarity Sensor

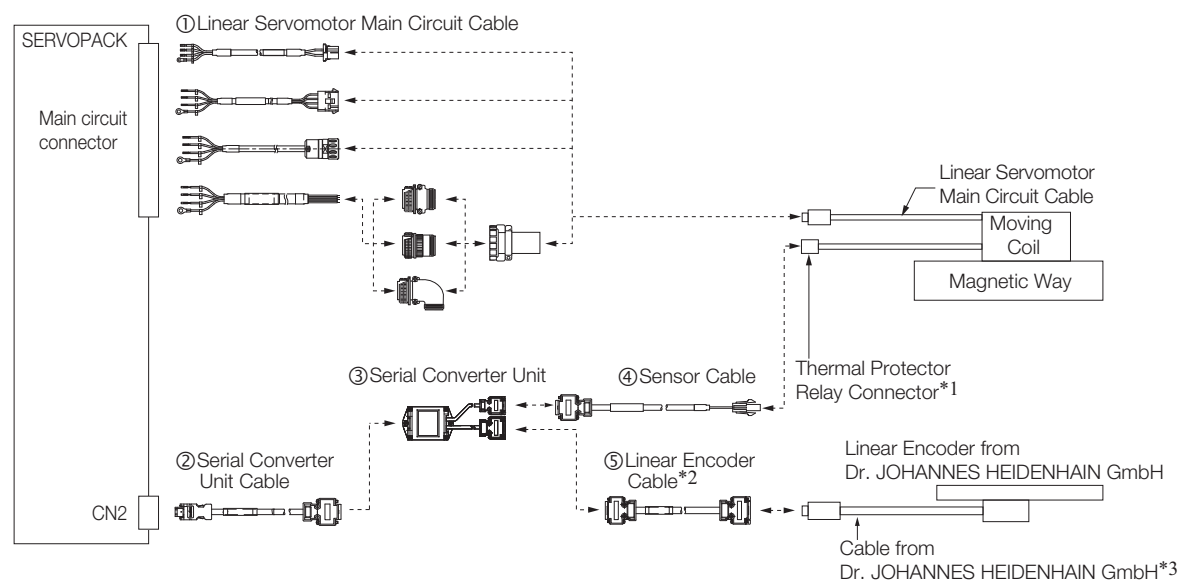

Servomotors Other Than the SGLFW2

*1. When using a JZDP-J00□-□□□ Serial Converter Unit, do not use a Yaskawa Linear Encoder Cable that is longer than 3 m.

*2. Contact Dr. JOHANNES HEIDENHAIN GmbH for details on the cables (analog 1 Vp-p output, D-sub 15-pin, male).

SGLFW2 Servomotors

*1. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

*2. When using a JZDP-J00□-□□□ Serial Converter Unit, do not use a Yaskawa Linear Encoder Cable that is longer than 3 m.

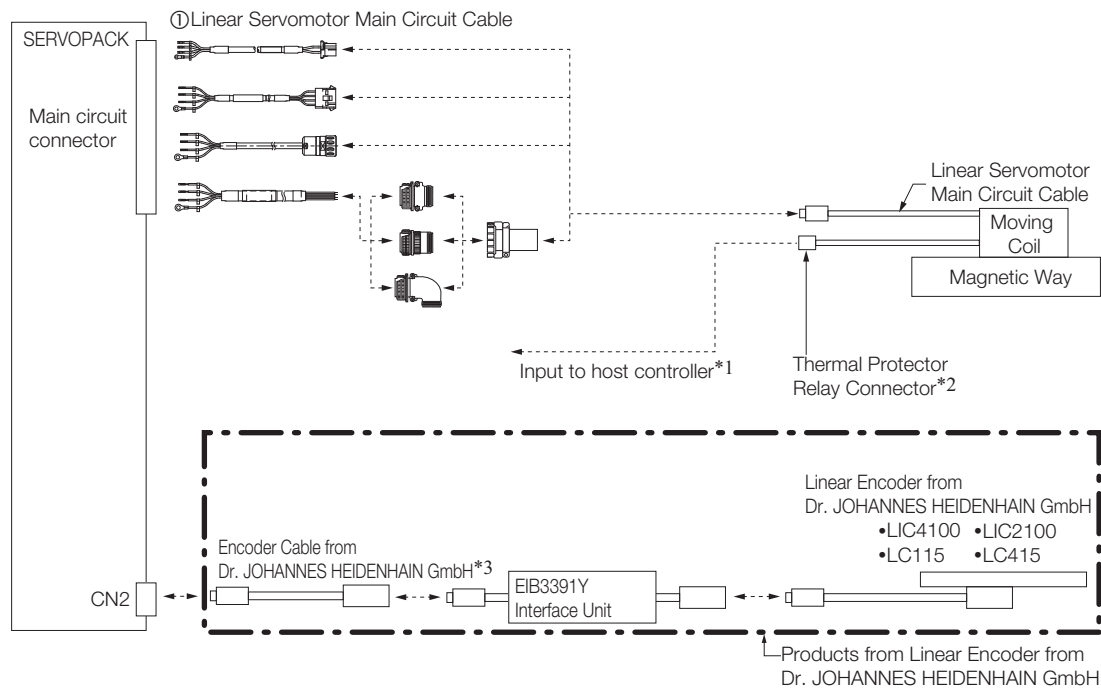

*3. Contact Dr. JOHANNES HEIDENHAIN GmbH for details on the cables (analog 1 Vp-p output, D-sub 15-pin, male).

No.	Cable Type	Reference

⑤	Linear Encoder Cable	page 329		

◆ LIC4100, LIC2100, LC115, or LC415 Linear Encoder with EIB3391Y Interface Unit

1. You cannot use an LIC4100, LIC2100, LC115, or LC415 Linear Encoder together with a Linear Servomotor with a Polarity Sensor.
2. If you use an SGLFW2 Servomotor, input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

*1. Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following manual for information on connector models.

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

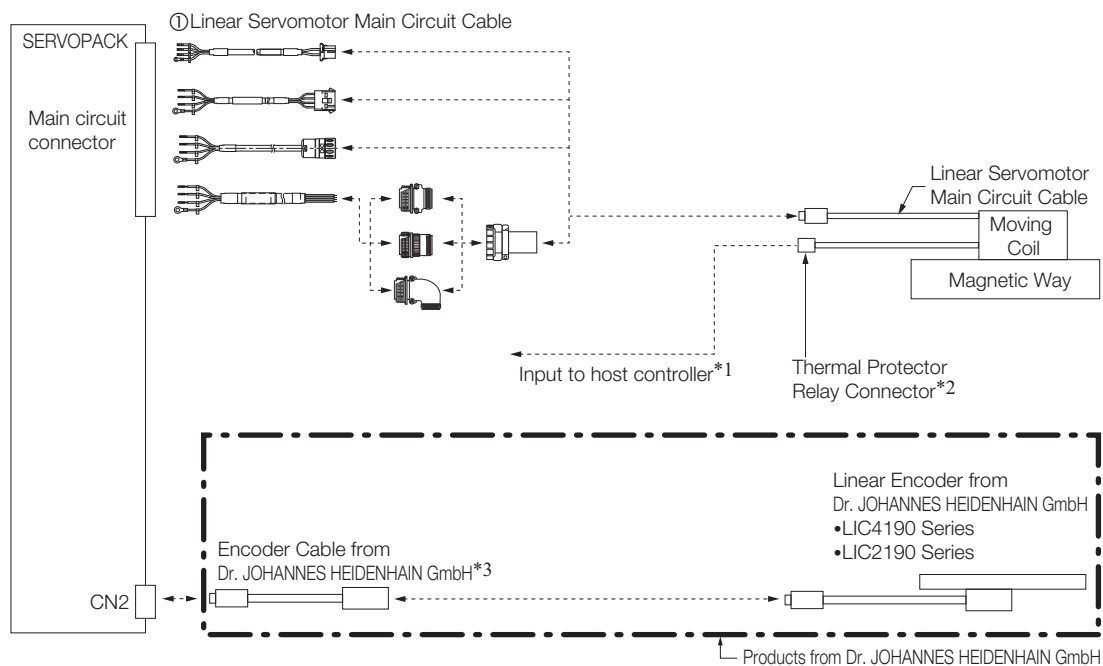

*3. Use an Encoder Cable from Dr. JOHANNES HEIDENHAIN GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed Encoder Cable specifications.

No.	Cable Type	Reference		
		SGLG	SGLF	SGLT
①	Linear Servomotor Main Circuit Cable	page 255	page 278	page 303

◆ LIC4190 or LIC2190 Series Linear Encoder

1. You cannot use an LIC4190 or LIC2190 Series Linear Encoder together with a Linear Servomotor with a Polarity Sensor.
2. If you use an SGLFW2 Servomotor, input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

*1. Cables to connect to the host controller are not provided by Yaskawa.

Refer to the following manual for information on connector models.

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

*3. Use an Encoder Cable from Dr. JOHANNES HEIDENHAIN GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed Encoder Cable specifications.

No.	Cable Type	Reference		
		SGLG	SGLF	SGLT
①	Linear Servomotor Main Circuit Cable	page 255	page 278	page 303

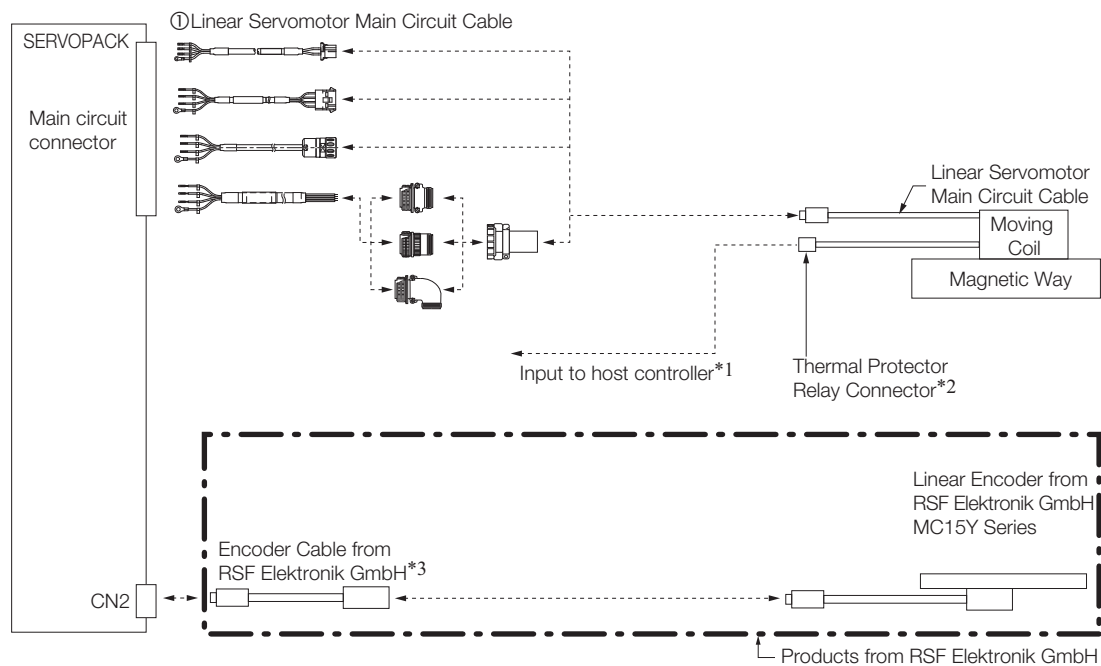

Connection to Linear Encoder from RSF Elektronik GmbH

◆ MC15Y Series Linear Encoder

Important

1. You cannot use an MC15Y Series Linear Encoder together with a Linear Servomotor with a Polarity Sensor.
2. If you use an SGLFW2 Servomotor, input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

*1. Cables to connect to the host controller are not provided by Yaskawa.

Refer to the following manual for information on connector models.

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

*3. Use an Encoder Cable from RSF Elektronik GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed Encoder Cable specifications.

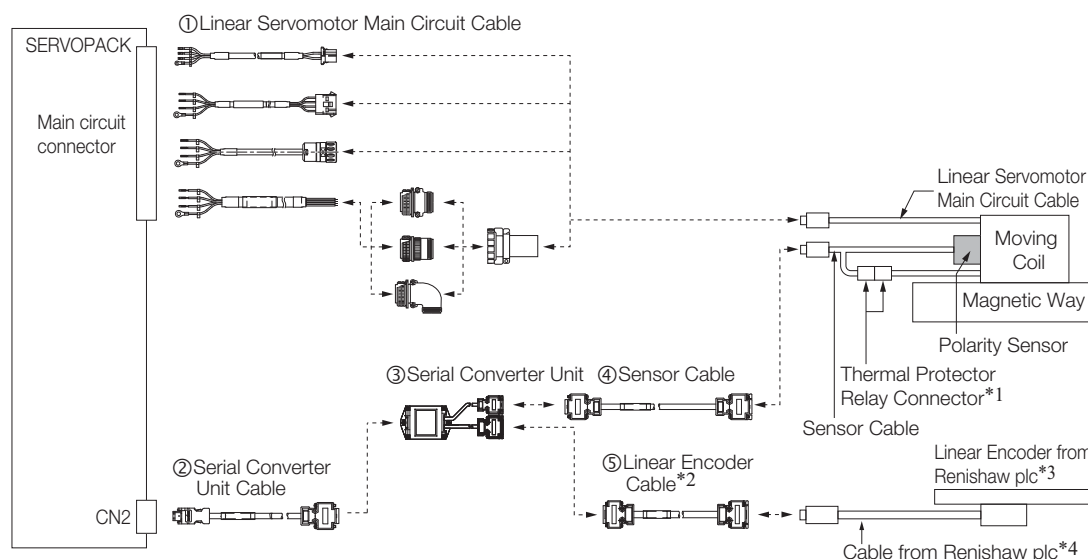

No.	Cable Type	Reference		
		SGLG	SGLF	SGLT
①	Linear Servomotor Main Circuit Cable	page 255	page 278	page 303

Connections to Linear Encoder from Renishaw plc

◆ Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a Yaskawa Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the Serial Converter Unit.

■ Connecting to a Linear Servomotor with a Polarity Sensor

*1. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

*2. When using a JZDP-J00□-□□□ Serial Converter Unit, do not use a Yaskawa Linear Encoder Cable that is longer than 3 m.

*3. If you use the origin signals with a Linear Encoder from Renishaw plc, the origin may sometimes be falsely detected.

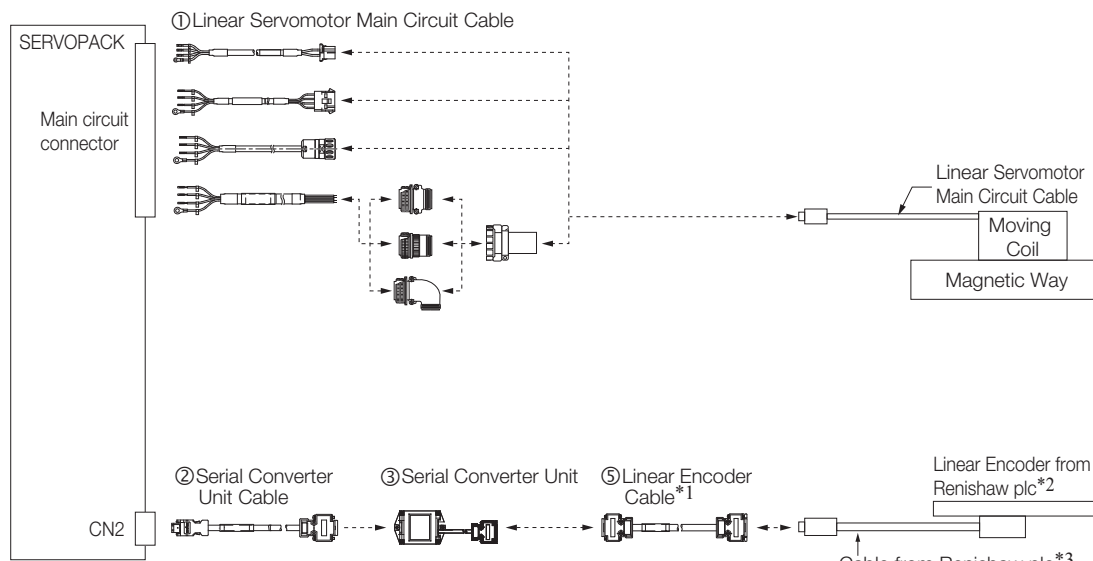

If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

*4. Contact Renishaw plc for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Renishaw plc. However, the BID and DIR signals are not connected.

No.	Cable Type	Reference

◆ EVOLUTE Series Linear Encoder (model: EL36Y□□□□□□□□),
RESOLUTE Series Linear Encoder (model: RL36Y□□□□□□□□)

Important

1. You cannot use an EVOLUTE Series or RESOLUTE Series Linear Encoder together with a Linear Servomotor with a Polarity Sensor.
2. If you use an SGLFW2 Servomotor, input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

*1. Cables to connect to the host controller are not provided by Yaskawa.

Refer to the following manual for information on connector models.

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

*3. Use an Encoder Cable from Renishaw plc. Contact Renishaw plc for detailed Encoder Cable specifications.

Connection to Linear Encoder from RLS d.o.o.

◆ LA11YA Series Linear Encoder

Important

1. You cannot use an LA11YA Series Linear Encoder together with a Linear Servomotor with a Polarity Sensor.
2. If you use an SGLFW2 Servomotor, input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

*1. Cables to connect to the host controller are not provided by Yaskawa.

Refer to the following manual for information on connector models.

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

*3. Use an Encoder Cable from RLS d.o.o. Contact RLS d.o.o. or Renishaw plc for detailed Encoder Cable specifications.

No.	Cable Type	Reference		
		SGLG	SGLF	SGLT
①	Linear Servomotor Main Circuit Cable	page 255	page 278	page 303

Connections to Linear Encoder from Magnescale Co., Ltd.

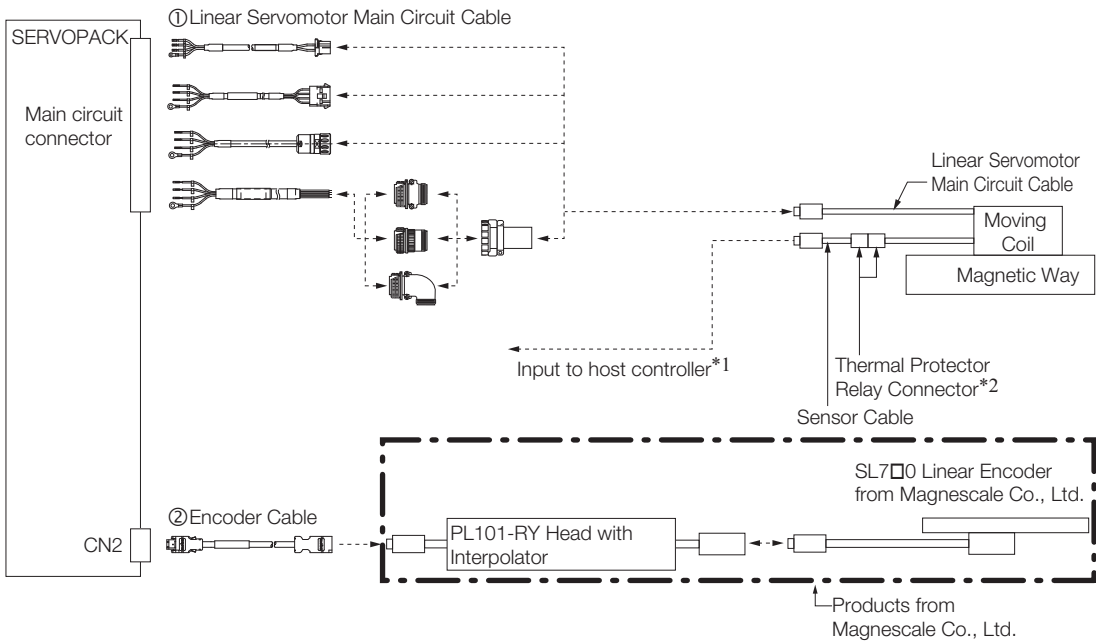

◆ SL7□0 Linear Encoder and PL101-RY Sensor Head with Interpolator

Important

1. You cannot use a PL101-RY Sensor Head with an Interpolator together with a Linear Servomotor with a Polarity Sensor.

2. If you use an SGLFW2 Servomotor, input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

*1. Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following manual for information on connector models.
 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

No.	Cable Type	Reference		
		SGLG	SGLF	SGLT
①	Linear Servomotor Main Circuit Cable	page 255	page 278	page 303
②	Encoder Cable	Refer to the below.		

■ Encoder Cable

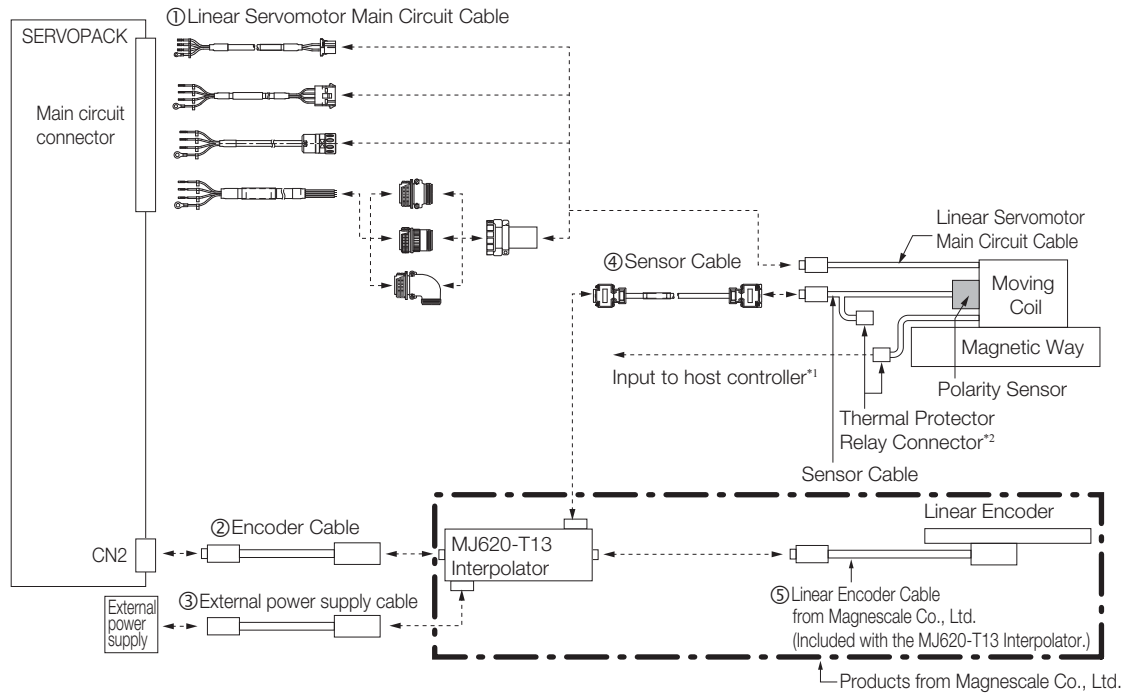

Name	Length (L)	Order Number		Appearance
		Standard Cable	Flexible Cable*	
Cable with Connectors on Both Ends	3 m	JZSP-CMP00-03-E	JZSP-CMP10-03-E	
	5 m	JZSP-CMP00-05-E	JZSP-CMP10-05-E	
	10 m	JZSP-CMP00-10-E	JZSP-CMP10-10-E	
	15 m	JZSP-CMP00-15-E	JZSP-CMP10-15-E	
	20 m	JZSP-CMP00-20-E	JZSP-CMP10-20-E	

* Use Flexible Cables for moving parts of machines, such as robots.
The recommended bending radius (R) is 46 mm or larger.

◆ SL7□0 Linear Encoder, PL101 Sensor Head, and MJ620-T13 Interpolator

1. A 5-VDC power supply is required for the MJ620-T13. (The 5-VDC power supply is not provided by Yaskawa.)
2. Refer to the MJ620-T13 specifications from Magnescale Co., Ltd. for the current consumption of the MJ620-T13.
3. If you use an SGLFW2 Servomotor, remove the thermal protector relay connector and input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

*1. Cables to connect to the host controller are not provided by Yaskawa.

Refer to the following manual for information on connector models.

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

	20 m	JZSP-CMP09-20-E	JZSP-CSP39-20-E

Note: We recommend that you use Flexible Cables.

■ External Power Supply Cables

This cable is not provided by Yaskawa. Refer to the table on the right for the pin layout.

For details, refer to the specifications for the MJ620-T13 from Magnescale Co., Ltd..

- Connector Header: MC1.5/2-GF-3.81 (Phoenix Contact)
- Connector Plug: MC1.5/2-STF-3.81 (Phoenix Contact)

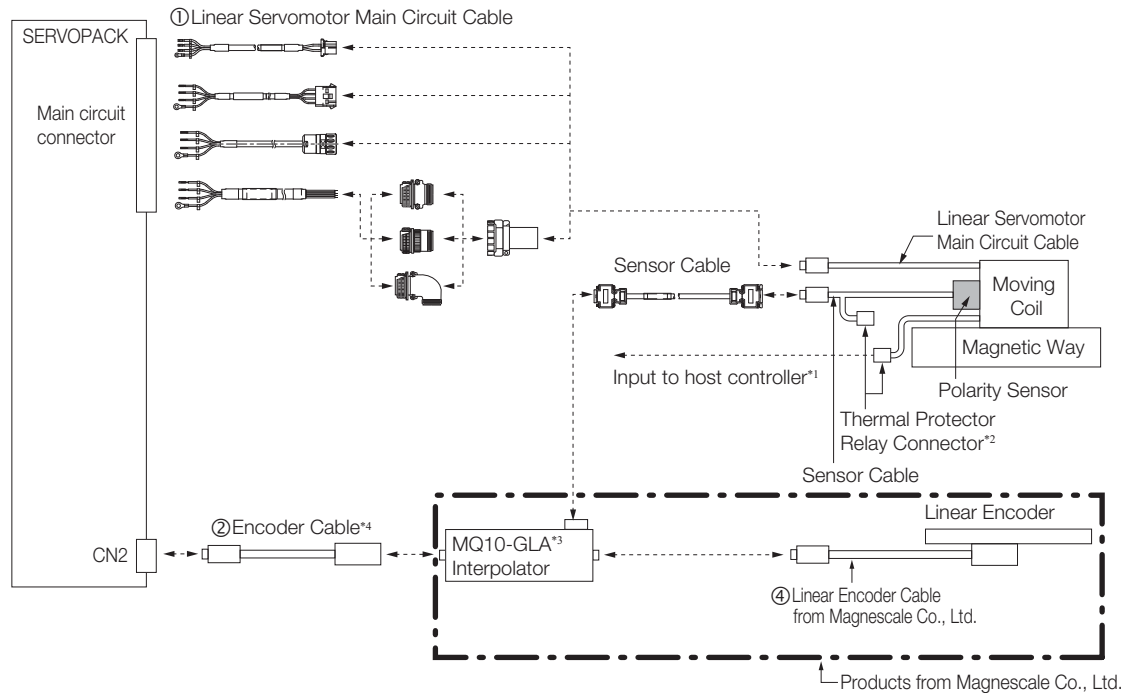

Pin	Signal	Function
1	+5 V	+5 V
2	0 V	0 V

◆ SmartSCALE Linear Encoder (SQ10 Scale + MQ10-□LA Interpolator)

Important

If you use an SGLFW2 Servomotor, remove the thermal protector relay connector and input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

*1. Cables to connect to the host controller are not provided by Yaskawa.

Refer to the following manual for information on connector models.

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

*3. This cable configurations shown above is the connection when you use the MQ10-GLA interpolator with polarity sensor.

*4. The maximum length of the Serial Converter Unit Cable is 15 m.

	15 m	JZSP-CMP09-15-E	JZSP-CSP39-15-E

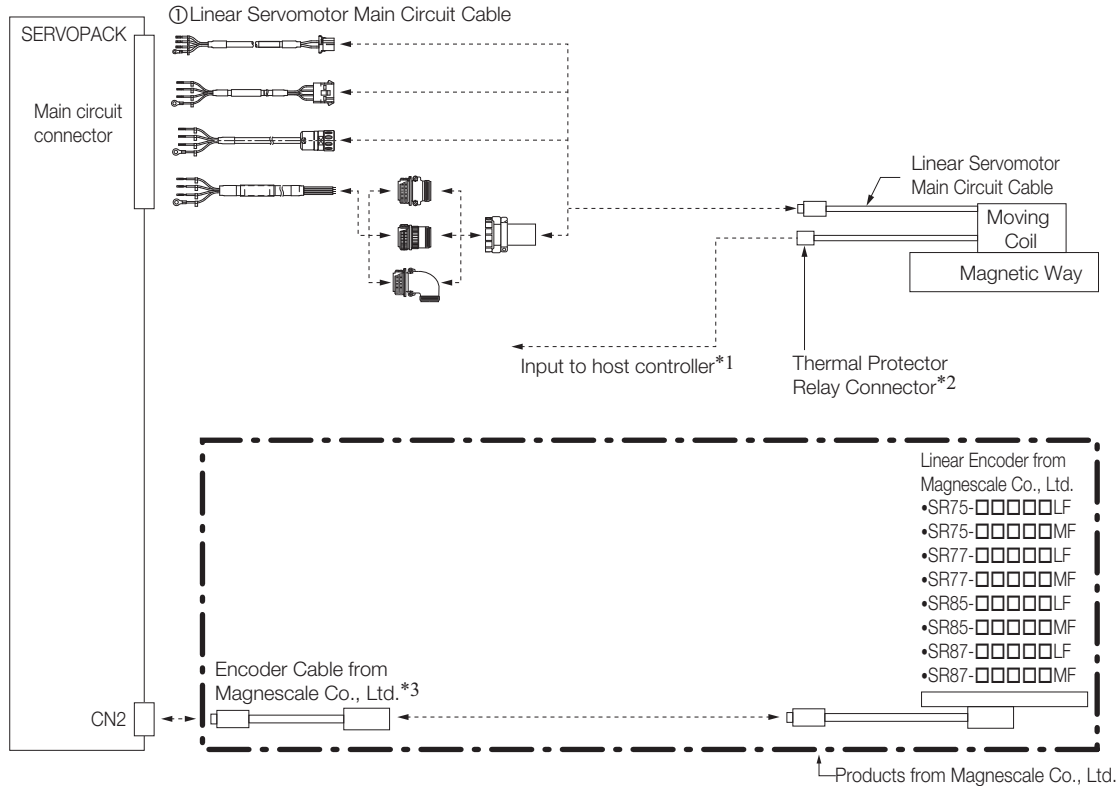

Note: We recommend that you use Flexible Cables.

◆ SR-75, SR-77, SR-85, and SR-87 Linear Encoders

Important

1. You cannot use an SR-75, SR-77, SR-85, or SR-87 Linear Encoder with a Linear Servomotor with a Polarity Sensor.
2. If you use an SGLFW2 Servomotor, input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

*1. Cables to connect to the host controller are not provided by Yaskawa.

Refer to the following manual for information on connector models.

☞ *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

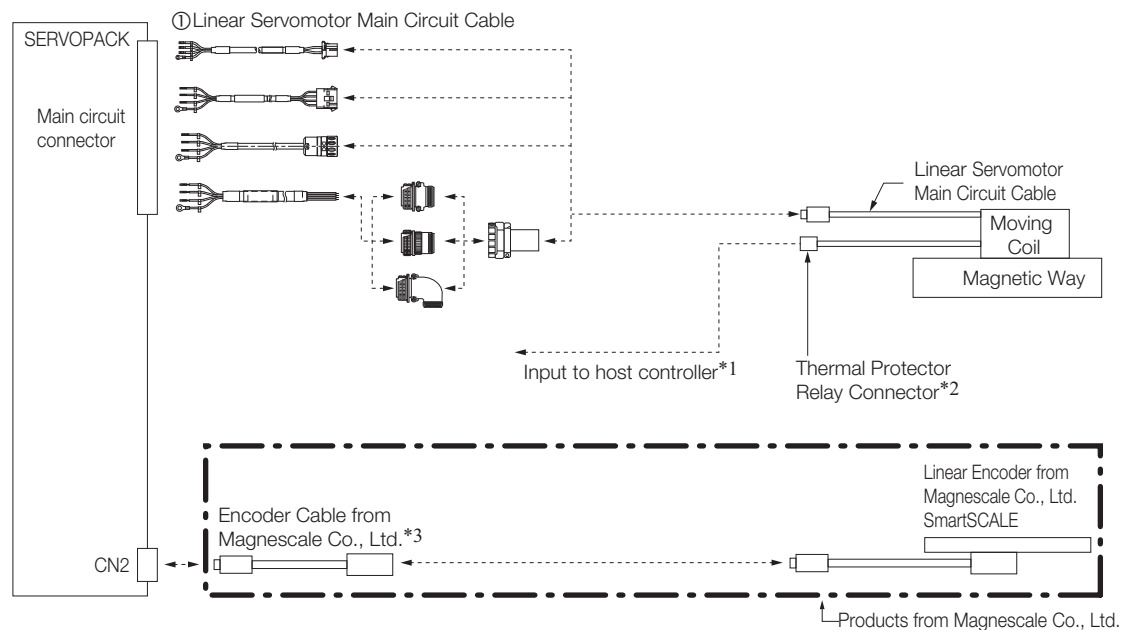

*3. Use an Encoder Cable from Magnescale Co., Ltd. Contact Magnescale Co., Ltd. for detailed Encoder Cable specifications.

No.	Cable Type	Reference		
		SGLG	SGLF	SGLT

Combined Serial Converter Unit, JZDP-□□□□-		017	018	019	020	181	182	183	184
Applicable SERVOPACKs	SGD7S-	1R6A, 2R1F			3R8A	5R5A	120A		200A
	SGD7W- SGD7C-	1R6A			5R5A		—		

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated forces are the continuous allowable force values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

- Heat Sink Dimensions
 - 125 mm × 125 mm × 13 mm: SGLFW-20A090A and -20A120A
 - 254 mm × 254 mm × 25 mm: SGLFW-35A120A and -35A230A
 - 400 mm × 500 mm × 40 mm: SGLFW-50A200B, 50A380B, and -1ZA200B
 - 600 mm × 762 mm × 50 mm: SGLFW-1ZA380B

*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

A : Continuous duty zone ————— (solid lines): With three-phase 200-V input
B : Intermittent duty zone (dotted lines): With single-phase 200-V input
 — — — (dashed-dotted lines): With single-phase 100-V input

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in *Force-Motor Speed Characteristics* on page 333.

◆ Magnetic Ways: SGLFM-20□□□A

Mounting Section Details

Note: More than one Magnetic Way can be connected. Connect the Magnetic Ways so that the reference marks on them are aligned in the same direction as shown in the figure.

Magnetic Way Model SGLFM-	L1	L2	(L3)	LA	N	Approx. Mass [kg]
20324A	324 ^{+0.1} _{-0.3}	270 (54 × 5)	(331.6)	30.8 ⁰ _{-0.2}	6	0.9

Selecting Cables

◆ Cable Configurations

To select a Linear Encoder, use *Recommended Linear Encoders* (pages 306 to 308). Prepare the cable required for the encoder.

* You can connect directly to an absolute linear encoder.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

- 3.1 kHz response frequency and improved vibration suppression

MECHATROLINK-III Communications

Reference Type..... 370

- Real-time communication (communication speed: 100 Mbps).
- High-precision motion control.
- 3.1 kHz response frequency and improved vibration suppression

MECHATROLINK-4 Communications

Reference Type..... 380

- High-precision motion control.
- High-speed and large-volume data communications.

INDEXER Module-Mounted Type 390

- Simple connection to the host controller with the I/O module.
- Reliable high-speed, high-precision positioning.
- Motion control without use of motion controllers.

DeviceNet Module-Mounted Type 404

- Compliant with the communication specifications of the DeviceNet open field network.
- Monitor information from servo drive with the host controller.
- Full range of positioning functions featured.

FT82/FT83 Specification

(SGM7D Motor Drive Type)..... 416

- High torque, high precision, and a user-friendly design.
- FT83 SERVOPACKs with built-in INDEXER.

Σ -7W SERVOPACKs (Two-axis)

MECHATROLINK-III Communications

Reference Type..... 446

- Two axes can be controlled with a SERVOPACK.
- The regenerative energy of multiple axes can be used as the drive energy.

Σ -7C SERVOPACKs

(Two-axis, with built-in Controllers)

Bus Connection Reference Type 454

- Build small-scale equipment system without PLC using one SERVOPACK.
- Expand functionality by mounting an option unit.
- Reduce burden of designing software when part of the equipment changes.

*1. You can use these models with either a single-phase or three-phase power supply input.

*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model: SGD7S-120A00A008).

*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

*5. Refer to the following manual for details.

📖 *Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual* (Manual No.: SIEP S800001 73)

*6. The BTO specification indicates if the SERVOPACK is customized by using the MechatroCloud BTO service.

You need a BTO number to order SERVOPACKs with customized specifications.

Refer to page M-15 for the details on the BTO service.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

Item		Specification								
Control Method		IGBT-based PWM control, sine wave current drive								
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)

			Input Impedance	Approx. 14 kΩ	
			Circuit Time Constant	16 μs	

- *1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVO-PACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable range cannot be increased by derating.
- *2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

- *3. Always perform risk assessment for the system and confirm that the safety requirements are met.

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

◆ SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

◆ SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, and -780A

Selecting Cables

◆ System Configurations

◆ Selection Table

Important

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JUSP-OP05A) for Σ-7-series SERVOPACKs.

*2. This Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

*3. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*4. Use the Connector Kit when you make cables yourself.

*1. You can use these models with either a single-phase or three-phase power supply input.

*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model: SGD7S-120A10A008).

*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

*5. Refer to the following manual for details.

📖 *Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual* (Manual No.: SIEP S800001 73)

*6. The BTO specification indicates if the SERVOPACK is customized by using the MechatroCloud BTO service.

You need a BTO number to order SERVOPACKs with customized specifications.

Refer to page M-15 for the details on the BTO service.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

Item		Specification								
Control Method		IGBT-based PWM control, sine wave current drive

Communications Standard		Conforms to USB2.0 standard (12 Mbps).	
Displays/Indicators			CHARGE, PWR, and COM indicators, and one-digit seven-segment display
MECHATROLINK-II Communications	Communications Protocol		MECHATROLINK-II
	Station Address Settings		41 to 5F hex (maximum number of slaves: 30) Selected with the combination of a rotary switch (S2) and DIP switch (S3).
	Baud Rate		10 Mbps, 4 Mbps A DIP switch (S3) is used to select the baud rate.
	Transmission Cycle		250 μs or 0.5 ms to 4.0 ms (multiples of 0.5 ms)
	Number of Transmission Bytes		17 or 32 bytes/station A DIP switch (S3) is used to select the number of transmission bytes.
Reference Method	Performance		Position, speed, or torque control with MECHATROLINK-II communications
	Reference Input		MECHATROLINK-I or MECHATROLINK-II commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)
MECHATROLINK-II Communications Setting Switches			Rotary switch (S2) positions: 16
			Number of DIP switch (S3) pins: 4

SERVOPACKs

Σ-7S Single-axis MECHATROLINK-II Communications Reference SERVOPACKs

Continued from previous page.

Item		Specification
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.)  Built-In Regenerative Resistor (page 506)
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*3	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Option Module		Fully-Closed Modules and Safety Modules Note: You cannot use a Fully-Closed Module and a Safety Module together.

*1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVO-PACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

◆ SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

◆ SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, and -780A

Selecting Cables

◆ System Configurations

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JUSP-OP05A) for Σ-7-series SERVOPACKs.

*2. This Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

*3. When using safety functions, connect this Cable to the safety function devices.
When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*4. Use the Connector Kit when you make cables yourself.

*1. You can use these models with either a single-phase or three-phase power supply input.

*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model: SGD7S-120A20A008).

*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

*5. Refer to the following manual for details.

 *Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual* (Manual No.: SIEP S800001 73)

*6. The BTO specification indicates if the SERVOPACK is customized by using the MechatroCloud BTO service.

You need a BTO number to order SERVOPACKs with customized specifications.

Refer to page M-15 for the details on the BTO service.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

Item		Specification								
Drive Method		IGBT-based PWM control, sine wave current drive								
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)

Item			Specification
I/O Signals	Encoder Divided Pulse Output		Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.
	Overheat Protection Input		Number of input points: 1 Input voltage range: 0 V to +5 V
	Sequence Input Signals	Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 7 (Input method: Sink inputs or source inputs)
			Input Signals <ul style="list-style-type: none">• P-OT (Forward Drive Prohibit) and N-OT (Reverse Drive Prohibit) signals• /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals• /DEC (Origin Return Deceleration Switch) signal• /EXT1 to /EXT3 (External Latch Input 1 to 3) signals• FSTP (Forced Stop Input) signal A signal can be allocated and the positive and negative logic can be changed.
	Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 (A photocoupler output (isolated) is used.)
		Output Signals That Can Be Allocated	Output signal: Servo Alarm (ALM)
Communications	RS-422A Communications (CN3)		Allowable voltage range: 5 VDC to 30 VDC Number of output points: 3 (A photocoupler output (isolated) is used.)
			Output Signals <ul style="list-style-type: none">• /COIN (Positioning Completion) signal• /V-CMP (Speed Coincidence Detection) signal• /TGON (Rotation Detection) signal• /S-RDY (Servo Ready) signal• /CLT (Torque Limit Detection) signal• /VLT (Speed Limit Detection) signal• /BK (Brake) signal• /WARN (Warning) signal• /NEAR (Near) signal A signal can be allocated and the positive and negative logic can be changed.
	USB Communications (CN7)		
Displays/Indicators			CHARGE, PWR, CN, L1, and L2 indicators, and one-digit seven-seg- ment display
MECHATROLINK-III Communications	Communications Protocol		MECHATROLINK-III
	Station Address Settings		03 to EF hex (maximum number of slaves: 62) The rotary switches (S1 and S2) are used to set the station address.
	Baud Rate		100 Mbps
	Transmission Cycle		125 μs, 250 μs, 500 μs, 750 μs, 1.0 ms to 4.0 ms (multiples of 0.5 ms)
	Number of Transmission Bytes		32 or 48 bytes/station A DIP switch (S3) is used to select the number of transmission bytes.
Reference Method	Performance		Position, speed, or torque control with MECHATROLINK-III communications
	Reference Input		MECHATROLINK-III commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)
	Profile		MECHATROLINK-III standard servo profile

SERVOPACKs

Σ-7S Single-axis MECHATROLINK-III Communications Reference SERVOPACKs

Continued from previous page.

Item		Specification
MECHATROLINK-III Communications Setting Switches		Rotary switch (S1 and S2) positions: 16 Number of DIP switch (S3) pins: 4
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.)  Built-In Regenerative Resistor (page 506)
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*3	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Option Module		Fully-Closed Modules and Safety Modules Note: You cannot use a Fully-Closed Module and a Safety Module together.

*1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVO-PACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

◆ SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

◆ SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, and -780A

Selecting Cables

◆ System Configurations

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
 - Order numbers and specifications of individual connectors for cables
- 📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

Code	Name	Length (L)	Order Number	Appearance

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JUSP-OP05A) for Σ-7-series SERVO-PACKs.

*2. This Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

*3. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*4. Use the Connector Kit when you make cables yourself.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

Item		Specification								
Drive Method		IGBT-based PWM control, sine wave current drive								
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)

SERVOPACKs

Σ-7S Single-axis MECHATROLINK-4 Communications Reference SERVOPACKs

Continued from previous page.

Item		Specification
Reference Method	Performance	Position, speed, or torque control with MECHATROLINK-4 communications
	Reference Input	MECHATROLINK-4 commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)
	Profile	MECHATROLINK-4 standard servo profile MECHATROLINK-III standard servo profile
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to the following manual for information on selecting External Regenerative Resistors.  Σ-7-Series Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*3	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Fully-Closed Module and Safety Module Note: You cannot use a Fully-Closed Module and a Safety Module together.

*1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVO-PACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable surrounding range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

◆ SGD7S-R70A, -R90A, -1R6A, -2R8A

◆ SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, and -780A

Selecting Cables

◆ System Configurations

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
 - Order numbers and specifications of individual connectors for cables
- 📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JUSP-OP05A) for Σ-7-series SERVOPACKs.

*2. This Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

*3. To connect the Digital Operator to a SERVOPACK with MECHATROLINK-4 Communications References, connect the Digital Operator to CN502 on the SERVOPACK. A JUSP-JC001-1 Communications Unit is required to make the connection.

*4. When using safety functions, connect this Cable to the safety function devices.
When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*5. Use the Connector Kit when you make cables yourself.

Σ-7S Single-axis INDEXER Module-Mounted SERVOPACKs

Configuration

A Σ-7S Single-axis INDEXER Module-Mounted SERVOPACK is a Command Option Attachable-Type SERVOPACK with an INDEXER Module mounted on the side of the SERVOPACK. Positioning with single-axis control can be performed by using program table operation and other functions.

Purchase Order Number

Purchasing a Module in a Set with the SERVOPACK

To order SERVOPACKs with a INDEXER Module attached, use the following model numbers.

INDEXER Module Power Loss

The power supply for an INDEXER Module is supplied from the control power supply of the SERVO-PACK. The power loss is given in the following table.

Item	Specification
Power Supply Method	5.05 VDC
Maximum Operating Voltage	5.25 VDC
Maximum Operating Current	500 mA
Maximum Power Loss	2.6 W

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

The specifications when the INDEXER Module is combined with a Command Option Attachable-Type SERVOPACK are given in the following table.

Item		Specification									
Control Method		IGBT-based PWM control, sine wave current drive									
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)									
	With Linear Servomotor	<ul style="list-style-type: none">Absolute linear encoder (The signal resolution depends on the absolute linear encoder.)Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)

SERVOPACKs

Σ-7S Single-axis INDEXER Module-Mounted SERVOPACKs

Continued from previous page.

Item			Specification
Communications	RS-422A Communications (CN3)	Interfaces	Digital Operator (JUSP-OP05A-1-E) and personal computer (with SigmaWin+)
		1:N Communications	Up to N = 15 stations possible for RS-422A port
		Axis Address Setting	Set with parameters.
	USB Communications (CN7)	Interfaces	Interface Personal computer (with SigmaWin+)
		Communications Standard	Conforms to USB2.0 standard (12 Mbps).
Displays/Indicators	SERVOPACK		CHARGE and PWR indicators, and one-digit seven-segment display
	INDEXER Module		Refer to the following manual for details.  <i>Σ-7-Series AC Servo Drive Σ-7S SERVOPACK Command Option Attachable Type with INDEXER Module Product Manual</i> (Manual No.: SIEP S800001 64)
Operating Methods	Program Table Method		<ul style="list-style-type: none">• Program table positioning in which steps are executed sequentially by commands given through contact input or serial communications• Positioning in which station numbers are specified by commands given through contact input or serial communications
	Max. Number of Steps		256
	Max. Number of Tables		256
	Max. Number of Stations		256
	Serial Communications Method		Serial command by 1-channel ASCII code Communications specifications: RS-422/485 (50 m max.) Connection topology: Multi-drop connection (16 axes max.) Baud rate: 9600, 19200, 38400 bps
	Other Functions		Registration (positioning by external signals), origin return
Analog Monitor (CN5)			Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)			Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing			Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to the following section for details.  <i>Built-In Regenerative Resistor (page 506)</i>
Overtravel (OT) Prevention			Stopping with a dynamic brake (DB), coasting to a stop, performing a hard stop, or performing a smooth stop (decelerating to a stop) for a CCW-OT (CCW Drive Prohibit Input) signal or CW-OT (CW Drive Prohibit Input) signal.
Protective Functions			Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions			Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs		/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output		EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*2		ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules			Fully-Closed Module Note: You cannot use a Safety Module if you are using an INDEXER Module.

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Always perform risk assessment for the system and confirm that the safety requirements are met.

Reference Methods

The INDEXER Module has two reference methods: digital I/O and serial commands. These command methods are described in the following sections.

Digital I/O is used with a program table (mode 0) or a jog speed table (mode 1). You can use a program table (mode 0) to execute the program steps that you select with I/O signal patterns (binary format). If the jog speed table (mode 1) is being used, the jog speed selected with the input signal pattern (binary format) can be executed.

• Program Table

	PGMSTEP	POS	SPD	RDST	RSPD	ACC*	DEC*	EVENT	LOOP	NEXT
256 steps	0	I+400000	2000	500000	1000	200	100	T5000	1	1
	1	I+100000	1000	200000	2000	100	50	IT0	1	END
	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮
	n	I+400000	2000	500000	1000	100	50	IT100	1	n+1
	n+1	I+100000	1000	200000	2000	⋮	⋮	NT0	1	END
	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮
	254	I+400000	2000	500000	1000	100	50	SEL3T200	1	127
	255	I+100000	1000	200000	2000	100	50	DT0	1	END

• Jog Speed Table

16 combinations	JSPD	JOG3	JOG2	JOG1	JOG0	Jog Speed
	0	0	0	0	0	1000
	1	0	0	0	1	2000
	2	0	0	1	0	4000
	⋮	⋮	⋮	⋮	⋮	⋮
	⋮	⋮	⋮	⋮	⋮	⋮
	15	1	1	1	1	5500

Note: 1: Signal is ON (active), 0: Signal is OFF (inactive).

*1. Forward operation at the jog speed is performed while the /JOGP signal is ON.

*2. Reverse operation at the jog speed is performed while the /JOGN signal is ON.

With serial commands, ASCII command strings are sent to the INDEXER Module through RS-422 or RS-485 communications and these commands are interpreted and executed immediately. You can use general-purpose serial communications (RS422/RS485) to perform independent control of up to 16 axes from one host controller (e.g., PC or HMI).

1SVON	# Servo turned ON.
1POS=400000	# Set relative position to 400,000.
1SPD=2000	# Set speed to 2,000.
1ACC=200	# Set acceleration rate to 200.
1DEC=100	# Set deceleration rate to 100.
1ST	# Start operation.

⑦	Serial Command Cable	Connector Kit*4		JZSP-CHI9-1	Contact your Yaskawa representative for the cable. 

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JUSP-OP05A) for Σ-7-series SERVOPACKs.

*2. This Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

*3. When using safety functions, connect this Cable to the safety function devices.

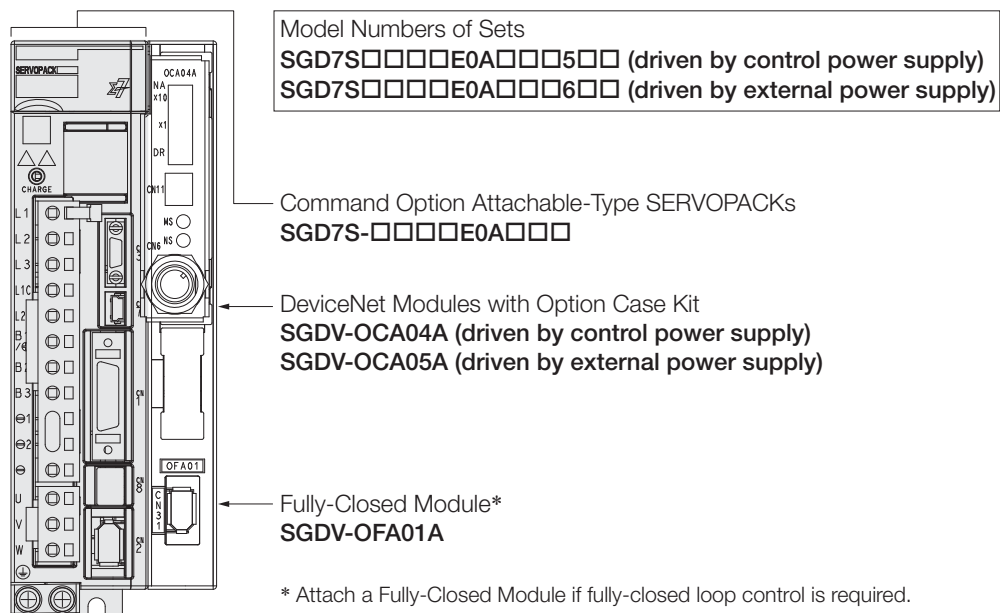

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*4. Use the Connector Kit when you make cables yourself.

Σ-7S Single-axis DeviceNet Module-Mounted SERVOPACKs

Configuration

A Σ-7S Single-axis DeviceNet Module-Mounted SERVOPACK is a Command Option Attachable-Type SERVOPACK with a DeviceNet Module mounted on the side of the SERVOPACK. Positioning and origin returns can be performed by sending commands from the host controller (DeviceNet master).

Purchase Order Number

Purchasing a Module in a Set with the SERVOPACK

To order SERVOPACKs with a DeviceNet Module attached, use the following model numbers.

DeviceNet Module Ratings

The power supply method and power loss of a DeviceNet Module depend on the model of the DeviceNet Module.

◆ SGDV-OCA04A (Interface: Driven by Control Power Supply)

The specifications of the SGDV-OCA04A DeviceNet Module are given in the following table.

Item	Specification	
	DeviceNet Communications Section	Control Section
Power Supply Method	Supplied from the DeviceNet communications cable.	Supplied from the control power supply of a Command Option Attachable-Type SERVOPACK.
Minimum Operating Voltage	11 VDC	Included in the current consumption of the Command Option Attachable-Type SERVOPACK.
Maximum Operating Voltage	25 VDC	
Maximum Operating Current	25 mA	
Maximum Power Loss	625 mW	

◆ SGDV-OCA05A (Interface: Driven by External Power Supply)

The specifications of the SGDV-OCA05A DeviceNet Module are given in the following table.

Item	Specification	
	DeviceNet Communications Section	Control Section
Power Supply Method	Supplied from the DeviceNet communications cable.	
Minimum Operating Voltage	11 VDC	
Maximum Operating Voltage	25 VDC	
Maximum Operating Current	100 mA for 24-VDC power supply 200 mA for 11-VDC power supply	
Maximum Power Loss	2.4 W	

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

The specifications when the DeviceNet Module is combined with a Command Option Attachable-Type SERVOPACK are given in the following table.

Item		Specification		
Control Method		IGBT-based PWM control, sine wave current drive		
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)		
	With Linear Servomotor	<ul style="list-style-type: none">Absolute linear encoder (The signal resolution depends on the absolute linear encoder.)Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)		
Environmental Conditions	Surrounding Air Temperature	0°C to 55°C		
	Storage Temperature	-20°C to 85°C		
	Surrounding Air Humidity	90% relative humidity max. (with no freezing or condensation)		
	Storage Humidity	90% relative humidity max. (with no freezing or condensation)		
	Vibration Resistance	4.9 m/s ²		
	Shock Resistance	19.6 m/s ²		
	Degree of Protection	Class	SERVOPACK Model: SGD7S-	
		IP20	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, R70F, R90F, 2R1F, 2R8F	
		IP10	120AE0A008, 180A, 200A, 330A, 470A, 550A, 590A, 780A	
	Pollution Degree	2 <ul style="list-style-type: none">Must be no corrosive or flammable gases.Must be no exposure to water, oil, or chemicals.Must be no dust, salts, or iron dust.		
Altitude	1,000 m max.			
Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity			
Applicable Standards		Refer to the following section for international standards.  International Standards (page 580)		
Mounting		Mounting	SERVOPACK Model: SGD7S-	
		Base-mounted	All Models	
		Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A, R70F, R90F, 2R1F, 2R8F	
		Duct-ventilated	470A, 550A, 590A, 780A	
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)		
	Coefficient of Speed Fluctuation* ¹	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)		
		0% of rated speed max. (for a voltage fluctuation of ±10%)		
		±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)		
	Torque Control Precision (Repeatability)	±1%		
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)		
I/O Signals	Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.		
	Overheat Protection Input	Number of input points: 1 Input voltage range: 0 V to +5 V

Operating Methods	Reference Method	Operation Specifications	Positioning via DeviceNet communications.
		Reference Inputs	DeviceNet communications Commands: Movement references (positioning or speed) and origin returns
	Position Control Functions	Acceleration/Deceleration Methods	Linear, asymmetrical, exponential, and S-curve acceleration/deceleration
		Operating Methods	Simple positioning, origin returns, continuous operation, and switching to positioning
		Fully-Closed Loop Control	Supported.
	Built-in Functions	Position Data Latching	Position data can be latched on phase C, the origin signal, or an external signal.
	DeviceNet Communications	Communications Methods	DeviceNet I/O communications and explicit messages
		Topology	Multidrop or T-branching*2
		Baud Rate	125 kbps, 250 kbps, or 500 kbps (Set on rotary switch (DR).)
		Cables	Special cables (OMRON DCA1-5CN02F1 Cable with Connectors or the equivalent.)
		Maximum Number of Nodes	64 nodes (including the master, Maximum number of slaves: 63)
Node Address Setting		0 to 63 (Set on NA x10 and x1 rotary switches.)	
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)	
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.	
Regenerative Processing		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to the following section for details.  Built-In Regenerative Resistor (page 506)	

Continued on next page.

Continued from previous page.

Item		Specification
Overtravel (OT) Prevention		Stopping with a dynamic brake (DB), coasting to a stop, performing a hard stop, or smooth stop (decelerating to a stop) for a CCW-OT (CCW Drive Prohibit Input) signal or CW-OT (CW Drive Prohibit Input) signal.
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*3	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Fully-Closed Module Note: You cannot use a Safety Module if you are using a DeviceNet Module.

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Externally connected terminating resistance is required.

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

The following table gives the specifications of the DeviceNet Module.

Item		Specification	
		SGDV-OCA04A	SGDV-OCA05A
Mounting Location		Mounted to the side of a Command Option Attachable-Type SERVOPACK.	
Power Supply Method	Control Section	Supplied from the control power supply of a Command Option Attachable-Type SERVOPACK.	Supplied from the DeviceNet communications cable.
	DeviceNet Communications Section	Supplied from the DeviceNet communications cable.	
Current Consumption	Control Section	Included in the current consumption of the Command Option Attachable-Type SERVOPACK.	For 24-VDC power supply: 100 mA max., for 11-VDC power supply: 200 mA max.
	DeviceNet Communications Section	25 mA max.	

Selecting Cables

◆ System Configurations

■ Σ -7S Single-axis Command Option Attachable-Type SERVOPACKs

■ Command Option Module: DeviceNet Module

◆ Selection Table

Important

Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

Code	Name		Length (L)	Order Number	Appearance
①	Analog Monitor Cable		1 m	JZSP-CA01-E	
②	Digital Operator Converter Cable		0.3 m	JZSP-CVS05-A3-E*1	
				JZSP-CVS07-A3-E*2	
③	Computer Cable		2.5 m	JZSP-CVS06-02-E	
④	I/O Signal Cables	Soldered Connector Kit		JZSP-CSI9-2-E	
		Connector-Terminal Block Converter Unit (with cable)	0.5 m	JUSP-TA26P-E	
			1 m	JUSP-TA26P-1-E	
			2 m	JUSP-TA26P-2-E	
		Cable with Loose Wires at One End (loose wires on peripheral device end)	1 m	JZSP-CSI02-1-E	
			2 m	JZSP-CSI02-2-E	
			3 m	JZSP-CSI02-3-E	
⑤	Safety Function Device Cables	Cables with Connectors*3	1 m	JZSP-CVH03-01-E	
			3 m	JZSP-CVH03-03-E	
		Connector Kit*4		Contact Tyco Electronics Japan G.K. Product name: Industrial Mini I/O D-shape Type 1 Plug Connector Kit Model number: 2013595-1	
⑥	DeviceNet Communications Cable			The communications cable must be an ODVA-Compliant DeviceNet communications cable. We recommend the following Cable. OMRON DCA1-5CN02F1 Cable with Connectors or the equivalent.	

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JUSP-OP05A) for Σ-7-series SERVOPACKs.

*2. This Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

*3. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*4. Use the Connector Kit when you make cables yourself.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

		0 to 1,073,741,824 reference units
	Input Signals	Reference Pulse Form
		One of the following is selected: Sign + pulse train, CW + CCW pulse trains, and two-phase pulse trains with 90° phase differential
		Input Form
		Line driver or open collector
		Maximum Input Frequency
		<ul style="list-style-type: none"> Line Driver Sign + pulse train or CW + CCW pulse trains: 4 Mpps Two-phase pulse trains with 90° phase differential: 1 Mpps Open Collector Sign + pulse train or CW + CCW pulse trains: 200 kpps Two-phase pulse trains with 90° phase differential: 200 kpps
		Input Multiplication Switching
		1 to 100 times
		Clear Signal
		Position deviation clear Line driver or open collector
	Torque Control	Reference Voltage
		<ul style="list-style-type: none"> Maximum input voltage: ±12 V (forward torque output for positive reference). 3 VDC at rated torque (default setting). Input gain setting can be changed.
		Input Impedance
		Approx. 14 kΩ
		Circuit Time Constant
		16 μs

*1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable surrounding range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

Regenerative Processing			Built-in  <i>Built-In Regenerative Resistor</i> (page 506)
Overtravel (OT) Prevention			Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions			Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions			Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs		/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output		EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*2		ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules			Fully-Closed Module Note: You cannot use a Safety Module if you are using an INDEXER Module.

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Always perform risk assessment for the system and confirm that the safety requirements are met.

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

◆ SGD7S-2R8A and -2R8F

◆ Selection Table

Important

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

		Capacity [W]	—	60
	Minimum Allowable External Resistance [Ω]		40	12
Overvoltage Category			III	

* This is the net value at the rated load.

◆ Single-phase, 100 VAC

Model SGD7S-		2R8F
Maximum Applicable Motor Capacity [kW]		0.4
Continuous Output Current [Arms]		2.8
Instantaneous Maximum Output Current [Arms]		9.3
Main Circuit	Power Supply	100 VAC to 120 VAC, -15% to +10%, 50 Hz/60 Hz
	Input Current [Arms]*	10
Control	Power Supply	100 VAC to 120 VAC, -15% to +10%, 50 Hz/60 Hz
	Input Current [Arms]*	0.38
Power Supply Capacity [kVA]*		1.4
Power Loss*	Main Circuit Power Loss [W]	26.2
	Control Circuit Power Loss [W]	12
	Total Power Loss [W]	38.2
Regenerative Resistor	Minimum Allowable External Resistance [Ω]	40
Overvoltage Category		III

* This is the net value at the rated load.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

◆ FT83 SERVOPACKs with Analog Voltage/Pulse Train References

Item		Specification
Control Method		IGBT-based PWM control, sine wave current drive
Feedback		Serial encoder: 24 bits (incremental encoder/absolute encoder)
Environmental Conditions	Surrounding Air Temperature* ¹	0°C to 55°C
	Storage Temperature	-20°C to 85°C
	Surrounding Air Humidity	90% relative humidity max. (with no freezing or condensation)
	Storage Humidity	90% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²
	Degree of Protection	IP10
	Pollution Degree	2 <ul style="list-style-type: none"> • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
	Altitude* ¹	1,000 m max.
Others		Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electro-magnetic/magnetic fields, or radioactivity
Applicable Standards		Refer to the following section for international standards.  <i>International Standards</i> (page 580)
Mounting		Base-mounted or rack-mounted
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation* ²	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)
		0% of rated speed max. (for a load fluctuation of ±10%)
		±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)
	Torque Control Precision (Repeatability)	±1%
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)
I/O Signals	Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.
	Overheat Protection Input	Number of input points: 1 Input voltage range: 0 V to +5 V

SERVOPACKs

Σ-7S Single-axis FT83 SERVOPACKs SGM7D Motor Drive with built-in INDEXER

Continued from previous page.

Item			Specification		
Overtravel (OT) Prevention			Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal		
Protective Functions			Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.		
Utility Functions			Gain adjustment, alarm history, jogging, origin search, etc.		
Safety Functions	Inputs		/HWBB1 and /HWBB2: Base block signals for Power Modules		
	Output		EDM1: Monitors the status of built-in safety circuit (fixed output)		
	Applicable Standards *3		ISO13849-1 PLe (Category 3) and IEC61508 SIL3		
Applicable Option Modules			Fully-closed Modules and Safety Modules Note: You cannot use a Fully-closed Module and a Safety Module together.		
Controls	Speed Control	Soft Start Time Setting		0 s to 10 s (Can be set separately for acceleration and deceleration.)	
		Input Signal	Reference Voltage	<ul style="list-style-type: none">Maximum input voltage: ±12 V (forward motor rotation for positive reference).6 VDC at rated speed (default setting). Input gain setting can be changed.	
			Input Impedance	Approx. 14 kΩ	
			Circuit Time Constant	30 μs	
		Internal Set Speed Control	Rotation Direction Selection	With Proportional Control signal	
			Speed Selection	With Forward/Reverse External Torque Limit signals (speed 1 to 3 selection). Servomotor stops or another control method is used when both signals are OFF.	
		Position Control	Feedforward Compensation		0% to 100%
	Output Signal Positioning Completed Width Setting		0 to 1,073,741,824 reference units		
	Input Signals		Reference Pulses	Reference Pulse Form	One of the following is selected: Sign + pulse train, CW + CCW pulse trains, and two-phase pulse trains with 90° phase differential
				Input Form	Line driver or open collector
				Maximum Input Frequency	<ul style="list-style-type: none">Line Driver Sign + pulse train or CW + CCW pulse trains: 4 Mpps Two-phase pulse trains with 90° phase differential: 1 MppsOpen Collector Sign + pulse train or CW + CCW pulse trains: 200 kpps Two-phase pulse trains with 90° phase differential: 200 kpps
				Input Multiplication Switching	1 to 100 times
			Clear Signal		Position deviation clear Line driver or open collector
	Torque Control		Input Signal	Reference Voltage	<ul style="list-style-type: none">Maximum input voltage: ±12 V (forward torque output for positive reference).3 VDC at rated torque (default setting). Input gain setting can be changed.
				Input Impedance	Approx. 14 kΩ
				Circuit Time Constant	16 μs

*1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVO-PACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable surrounding range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

Selecting Cables

◆ System Configurations

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

- *1. You can use these models with either a single-phase or three-phase power supply input.
- *2. If you use the Servomotor with a single-phase 200-VAC power supply input, derate the load ratio to 65%.
An example is given below. If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65%.
 $((90\% + 40\%)/2 = 65\%)$
- *3. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.
- *4. Refer to the following manual for details.
 *Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual* (Manual No.: SIEP S800001 73)
- *5. Refer to the following manual for details.
 *Σ-7-Series AC Servo Drive Σ-7W/Σ-7C SERVOPACK with Hardware Option Specifications HWBB Function Product Manual* (Manual No.: SIEP S800001 72)
- *6. The BTO specification indicates if the SERVOPACK is customized by using the MechatroCloud BTO service.
You need a BTO number to order SERVOPACKs with customized specifications.
Refer to page M-15 for the details on the BTO service.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

Item		Specification
Control Method		IGBT-based PWM control, sine wave current drive
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)
	With Linear Servomotor	<ul style="list-style-type: none"> Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)
Environmental Conditions	Surrounding Air Temperature	-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for derating specifications.  <i>Derating Specifications (page 451)</i>
	Storage Temperature	-20°C to 85°C
	Surrounding Air Humidity	95% relative humidity max. (with no freezing or condensation)
	Storage Humidity	95% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²
	Degree of Protection	IP20
	Pollution Degree	2 <ul style="list-style-type: none"> Must be no corrosive or flammable gases. Must be no exposure to water, oil, or chemicals. Must be no dust, salts, or iron dust.
	Altitude	1,000 m or less. With derating, usage is possible between 1,000 m and 2,000 m. Refer to the following section for derating specifications.  <i>Derating Specifications (page 451)</i>
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity
Applicable Standards		Refer to the following section for international standards.  <i>International Standards (page 580)</i>
Mounting		Base-mounted or rack-mounted
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)
		0% of rated speed max. (for a voltage fluctuation of ±10%)
	Torque Control Precision (Repeatability)	±1%
Soft Start Time Setting		0 s to 10 s (Can be set separately for acceleration and deceleration.)

Item	Specification
Analog Monitor (CN5)	Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)	Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing	Built-in
Overtravel (OT) Prevention	Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions	Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions	Gain adjustment, alarm history, jogging, origin search, etc.
Option Module	Option Module cannot be attached.

* The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

◆ SGD7W-1R6A, -2R8A, -5R5A, and -7R6A

Selecting Cables

◆ System Configurations

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

	Coefficient of Speed Fluctuation*		±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)
			0% of rated speed max. (for a load fluctuation of ±10%)
			±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)
	Torque Control Precision (Repeatability)		±1%
Soft Start Time Setting		0 s to 10 s (Can be set separately for acceleration and deceleration.)	
I/O Signals	Overheat Protection Input		Number of input points: 2 Input voltage range (0 V to 5 V)
	Sequence Input Signals	Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 12
			Input method: Sink inputs or source inputs Input Signals: <ul style="list-style-type: none">• P-OT (Forward Drive Prohibit Input) and N-OT (Reverse Drive Prohibit Input) signals• /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals• /DEC (Origin Return Deceleration Switch) signal• /EXT1 to /EXT3 (External Latch Input 1 to 3) signals• FSTP (Forced Stop Input) signal A signal can be allocated and the positive and negative logic can be changed.
	Sequence Output Signals	Fixed Outputs	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 2 Output signal: ALM (Servo Alarm Output) signal
		Output Signals That Can Be Allocated	Allowable voltage range: 5 VDC to 30 VDC Number of outputs points: 5 (Photocoupler outputs (isolated) are used.)
			Output Signals: <ul style="list-style-type: none">• /COIN (Positioning Completion) signal• /V-CMP (Speed Coincidence Detection) signal• /TGON (Rotation Detection) signal• /S-RDY (Servo Ready) signal• /CLT (Torque Limit Detection) signal• /VLT (Speed Limit Detection) signal• /BK (Brake) signal• /WARN (Warning) signal• /NEAR (Near) signal A signal can be allocated and the positive and negative logic can be changed.
Communications	USB Communications (CN7)	Interface	Personal computer (with SigmaWin+)
		Communications Standard	Conforms to USB2.0 standard (12 Mbps).
Displays/Indicators			CHARGE and PWR indicators, and two, one-digit seven-segment displays
Reference Method			Reference with built-in controller
Dynamic Brake (DB)			Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing			Built-in
Overtravel (OT) Prevention			Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit Input) or N-OT (Reverse Drive Prohibit Input) signal
Protective Functions			Overcurrent, overvoltage, undervoltage, overload, regeneration error, etc.
Utility Functions			Gain adjustment, alarm history, jogging, origin search, etc.
Applicable Option Modules			None

* The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

Controller Section Specifications

This section provides the specifications of the Controller Section.

◆ Hardware Specifications

Item	Specification
Flash Memory	Capacity: 24 MB (15 MB of user memory)
SDRAM	Capacity: 256 MB
MRAM	Capacity: 4 MB
Calendar	Seconds, minutes, hour, day, week, month, year, day of week, and timing
Ethernet	One port, 10Base-T or 100Base-TX
MECHATROLINK	<ul style="list-style-type: none"> • MECHATROLINK-III, 1 circuit with 1 port • Master
USB	<ul style="list-style-type: none"> • USB 2.0, Type A host, 1 port • Compatible devices: USB storage
Indicators and Displays	<ul style="list-style-type: none"> • Seven-segment display • Status indicators • USB Status Indicator • Ethernet status indicators
Switches	<ul style="list-style-type: none"> • DIP switches: Mode switches • STOP/SAVE switch
Connectors	<ul style="list-style-type: none"> • MECHATROLINK-III connector (CN6) • USB connector (CN10) • Ethernet connector (CN12) • Controller Section I/O connector (CN13)

◆ Performance Specifications

	Item	Specification	Remarks
Number of Controlled Axes	SVC4	4 axes 1 circuit	Circuit number selected from 1 to 16.
	SVD	2 axes	Circuit number selected from 1 to 16.
	SVR4	4 axes 1 circuit	Circuit number selected from 1 to 16.
	Maximum Number of Controlled Axes	6 axes	—
Scan Time Settings	H Scan	0.5 ms to 32.0 ms (in 0.25-ms increments)	Refer to the following manual for details.  <i>Σ-7-Series Σ-7C SERVOPACK Product Manual</i> (Manual No.: SIEP S800002 04)
	L Scan	2.0 ms to 300 ms (in 0.5-ms increments)	—
	H Scan Default	4 ms	—
	L Scan Default	200 ms	—
Peripheral Devices	Calendar	Supported.	—
	Communications Interface	Ethernet	—
	USB	Supported.	—
Memory Capacity	DRAM	256 MB with ECC	—
	MRAM	4 MB	Up to 1 MB can be used to back up table data.
	Program Capacity	15 MB	Total capacity including definition data, ladder programs, table data, etc.
Ladder Programs	Number of Startup Drawings (DWG.A)	64	Number of steps per drawing: 4,000
	Number of Interrupt Drawings (DWG.I)	64	
	Number of High-Speed Scan Drawings (DWG.H)	1000	
	Number of Low-Speed Scan Drawings (DWG.L)	2000	
	Number of User Function Drawings	2000	
Motion Programs	Number of Programs	512	Total of all programs listed below: <ul style="list-style-type: none"> • Motion main programs • Motion subprograms • Sequence main programs • Sequence subprograms
	Number of Groups	16	—
	Number of Tasks	32	—
	Number of Nesting Levels for IF Instructions	8	—
	Number of Nesting Levels for MSEE Instructions	8	—
	Number of Parallel Forks Per Task	8	Select from the following four options: <ul style="list-style-type: none"> • Main: 4 forks, Sub: 2 forks • Main: 8 forks • Main: 2 forks, Sub: 4 forks • Sub: 8 forks
	Number of Simultaneously Controlled Axes Per Task	10 axes	—

Continued on next page.

SERVOPACKs

Σ-7C Two-axis Bus Connection Reference SERVOPACKs with built-in Controllers

Continued from previous page.

Item		Specification	Remarks
Registers	S Registers	64 Kwords	—
	M Registers	1 Mword	—
	G Registers	2 Mwords	—
	I/O Registers	64 Kwords	—
	Motion Registers	32 Kwords	—
	C Registers	16 Kwords	—
	# Registers	16 Kwords	—
	D Registers	16 Kwords	—
Data Types	Bit (B)	Supported.	0 or 1
	Integer (W)	Supported.	-32,768 to 32,767
	Double-Length Integer (L)	Supported.	-2,147,483,648 to 2,147,483,647
	Quadruple-Length Integer (Q)	Supported.	-9,223,372,036,854,775,808 to 9,223,372,036,854,775,807
	Single-Precision Real Number (F)	Supported.	± (1.175E-38 to 3.402E+38) or 0
	Double-Precision Real Number (D)	Supported.	±(2.225E-308 to 1.798E+308) or 0
	Addresses (A)	Supported.	0 to 16,777,214
Index Registers	Subscript i	Supported.	Special registers for offsetting addresses. Subscripts i and j function identically.
	Subscript j	Supported.	
	Array Registers	Supported.	Used to handle registers as arrays.
Data Tracing	Number of Groups	4	—
	Trace Memory	256 Kwords total in 4 groups	—
	Traceable Data Points	16 points per group	—
	Trigger Types	>, <, =, <>, >=, <= and differential detection of the above conditions	—
Data Logging	Number of Groups	4	—
	Log Storage Location	Built-in RAM disk or USB memory device	—
	Log File Formats	CSV file format or binary file format	—
	Data Logging Points	64 points per group	—
	Number of Log Files	Built-in RAM Disk	1 to 4,000
		USB Memory	1 to 32,767 or unlimited
	Trigger Types	>, <, =, <>, >=, <=	The ultimate upper limit is 10,000 files even if unlimited is selected.

◆ Communications Function Module Specifications

Item		Specification	Remarks
Abbreviation		218IFD	
Common Items	Transmission Interface	10Base-T/100Base-TX	—
	Number of Communications Ports (Connectors)	1	—
	Transmission Protocols	TCP/UDP/IP/ARP/ICMP/IGMP	—
Ethernet Communications	Maximum Number of Communications Connections	20 + 2 (I/O message communications)	—
	Maximum Number of Communications Channels	10 + 2 (I/O message communications)	—
	Automatic Reception	Supported.	Not supported for no-protocol communications.
	Maximum Number of Automatic Reception Connections	10	—
	Automatic Reception Status Monitor	Supported.	—
	Maximum Size of Message Communications	MEMOBUS	Write: 100 words Read: 125 words
		Extended MEMOBUS	Write: 2,043 words Read: 2,044 words
		MELSEC (A-Compatible 1E)	Write: 256 words Read: 256 words
		MELSEC (QnA-Compatible 3E)	Write: 960 words Read: 960 words
		MODBUS/TCP	Write: 100 words Read: 125 words
		OMRON	Write: 996 words Read: 999 words

		No-protocol	Write: 2,046 words
	Maximum Size of I/O Message Communications	MEMOBUS	Write: 100 words Read: 125 words
		Extended MEMOBUS	Write: 1,024 words Read: 1,024 words
		MELSEC (A-Compatible 1E)	Write: 256 words Read: 256 words
		MELSEC (QnA-Compatible 3E)	Write: 256 words Read: 256 words
		MODBUS/TCP	Write: 100 words Read: 125 words
		OMRON	Write: 996 words Read: 999 words
		Execution Conditions	You can select controls (start/stop) from a ladder program.
		Execution Status Monitor	Supported.
	MotomanSync-MP		Supported.
	FTP Server		Supported.
	FTP Client		Supported.
	Receive Buffer Mode Selection for No-protocol Communications		Supported.
	Engineering Tools	Communications Platform	Ethernet
		Controller Searches	Supported.
		Supported Engineering Tools	MPE720 Ver.7 and SigmaWin+ Ver.7

◆ Motion Control Function Module Specifications

Module	Item		Specification
SVD	Number of Controlled Axes* ¹		2
	Reference Update Cycle (High-Speed Scan Cycle Performed by the CPU)		500 μs to 32.0 ms
	Register Ranges		Registers for two axes are assigned from the registers for each circuit. Refer to the following manual for details.  <i>Σ-7-Series Σ-7C SERVOPACK Motion Control User's Manual</i> (Manual No.: SIEP S800002 03)
SVC4	Number of Controlled Axes* ¹		4
	Reference Update Cycle (High-Speed Scan Cycle Performed by the CPU)		500 μs to 32.0 ms
	Register Ranges		Registers for four axes are assigned from the registers for each circuit. Refer to the following manuals for details.  <i>Σ-7-Series Σ-7C SERVOPACK Motion Control User's Manual</i> (Manual No.: SIEP S800002 03)
	MECHATROLINK-III communications	Communications Interface	Master
		Communications Cycle (Reference Update Cycle)	500 μs to 32.0 ms
		Transmission Cycle* ²	125 μs, 250 μs, 500 μs, or 1 ms
		Communications Cable	MECHATROLINK-III Communications Cable
		Maximum Number of Connectable Stations	8
		Topology	Cascade connections, star connections, or mixed star-cascade connections
		Terminating Resistance	Not required.
		Connectable Slave Devices	SERVOPACKs, Stepping Motor Drivers, Inverters, I/O Modules, and Machine Controllers that support MECHATROLINK-III communications
		Supported Profiles	MECHATROLINK-III Servo Standard, MECHATROLINK-III I/O Standard, MECHATROLINK-III Inverter Standard, and MECHATROLINK-III Stepping Motor Standard
SVR4	Number of Controlled Axes* ¹		4
	Reference Update Cycle (High-Speed Scan Cycle Performed by the CPU)		500 μs to 32.0 ms
	Register Ranges		Registers for four axes are assigned from the registers for each circuit. Refer to the following manuals for details.  <i>Σ-7-Series Σ-7C SERVOPACK Motion Control User's Manual</i> (Manual No.: SIEP S800002 03)

*1. A maximum of six axes can be controlled with the Motion Control Function Module in a Σ-7C SERVOPACK. Do not control more than a total of six axes with one Motion Control Function Module.

*2. The transmission cycle is the cycle in which the SVC4 and the slave devices perform communications on the MECHATROLINK-III transmission path.

◆ M-EXECUTOR Specifications

■ Registerable Programs

Program Type		Number of Registered Programs
Motion Programs		32*
Sequence Programs	Startup	1
	Interrupt	Not possible.
	H scan	32*
	L scan	32*

* The combined total of motion programs and sequence programs must not exceed 32.

■ Program Control Methods

You can use the following control methods for the programs that are registered in the M-EXECUTOR:

Item	Motion Programs	Sequence Programs
Execution Method	Sequential execution	Startup: Event execution H scan: Scan execution L scan: Scan execution
System Work	The same number is used for the definition number and system work number.	
	Definition No.	System Work Number
	No.1	1
	No.2	2
	⋮	⋮
	No.32	32
Program Designation Method	Direct designation or indirect designation	Direct designation
Program Execution Method	Register the program in the definitions and start execution by turning ON the start signal.	Execution is started when the program is registered in the definitions.
Interpolation Override Setting	Supported.	Not supported.
I/O Link Definitions	Supported.	Not supported.
Motion Program Status Reporting in S Registers	Supported.	
Number of Parallel Forks	Up to 8 Main: 4 forks, Sub: 2 forks Main: 8 forks Main: 2 forks, Sub:4 forks Sub: 8 forks	No forks
Error Diagram Execution When an Operation Error Occurs	Supported.	

◆ USB Memory Specifications

Item	Specification	Remarks
Supported Media	USB memory device	Refer to the following section for details.  ■ Recommended USB Memory Device (page 465)
Applicable FAT	FAT16/32	—
Maximum Number of Nested Directories	10	—
File Information	Last update time-stamp supported.	Uses the calendar in the Controller Section. Refer to the following manual for details.  Σ-7-Series Σ-7C SERVOPACK Product Manual (Manual No.: SIEP S800002 04)
Maximum Length for File Name and Directory Names	256 characters	—
Current Directory Function	16	—
Maximum Number of Simultaneously Open Files	16	—
Formatting	Not supported.	Use a formatted USB memory device.

■ Recommended USB Memory Device

The following USB memory device is recommended. It can be purchased from Yaskawa.

Model	Specification	Manufacturer
SFU24096D1BP1TO-C-QT-111-CAP	4-GB USB memory	Swissbit Japan Inc.

◆ IO16 Function Module Specifications

The following table gives the specifications of the IO16 Function Module. There are 16 digital inputs and 16 digital outputs in the IO16 Function Module.

Item	Specification	
Digital Inputs	Number of Inputs	16
	Input Method	Sink/source
	Isolation Method	Photocouplers
	Input Voltage	24 VDC $\pm 20\%$
	Input Current	5 mA (typical)
	ON Voltage/Current	15 V min./2 mA min.
	OFF Voltage/Current	5 V max./1 mA max.
	ON/OFF Time	0.01 ms + Digital filter setting
	Digital Filter Setting	0 to 65,535 μ s
	Number of Commons	2 (8 points per common)
	Others	DI_00 is also used for interrupt signals. DI_01 is also used as the pulse latch input.
Digital Outputs	Number of Outputs	16
	Output Method	Transistor open-collector sink outputs
	Isolation Method	Photocouplers
	Output Voltage	24 VDC (20 V to 30 V)
	Output Current	50 mA max.
	Leakage Current When OFF	0.1 mA max.
	ON/OFF Time	0.01 μ s (for output current of 85 mA)
	Number of Commons	2 (8 points per common)
	Output Protection	Thermistor (automatic recovery after blow out)
	Others	DO_00 is also used as the Match Output.

◆ Counter Specifications

The following table gives the specifications of counter. The counter uses a pulse input on one channel.

Item	Specification	
Pulse Input	Number of Inputs	1 (phase A, B, or Z input)
	Input Circuits	Phases A and B: 5-V differential input, not isolated, maximum frequency: 4 MHz Phase Z: 5-V, 12-V, or 24-V photocoupler input, maximum frequency: 500 kHz
	Input Modes	Phases A and B, sign, and incrementing/decrementing
	Latch Input	Pulses are latched for phase Z or DI_01. Response Times for Phase-Z Input ON: 1 μ s max. OFF: 1 μ s max. Response Times for DI_01 Input ON: 60 μ s max. OFF: 0.5 ms max.
	Other Functions	Match detection, counter preset and clear, electronic gear conversion, phase-C (phase-Z), and digital filter

◆ System Register Specifications

This section shows the overall structure of the system registers.

Refer to the following manuals for details.

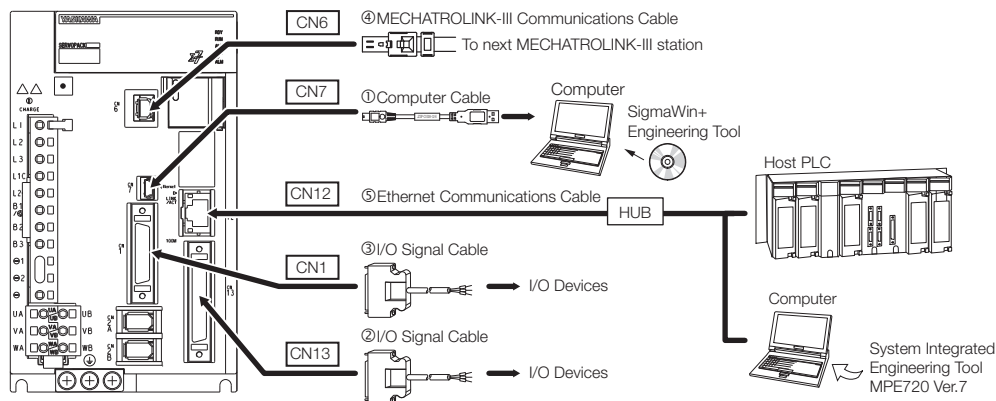

📖 *Σ-7-Series Σ-7C SERVOPACK Product Manual* (Manual No.: SIEP S800002 04)

📖 *Σ-7-Series Σ-7C SERVOPACK Troubleshooting Manual* (Manual No.: SIEP S800002 07)

Register Addresses	Contents
SW00000 to SW00029	System Service Registers
SW00030 to SW00049	System Status
SW00050 to SW00079	System Error Status
SW00080 to SW00089	User Operation Error Status
SW00090 to SW00103	System Service Execution Status
SW00104 to SW00109	Reserved.
SW00110 to SW00189	Detailed User Operation Error Status
SW00190 to SW00199	Reserved.
SW00200 to SW00503	System I/O Error Status
SW00504 and SW00505	Reserved.
SW00506 and SW00507	Security Status
SW00508 to SW00649	Reserved.
SW00650 to SW00667	USB-Related System Status
SW00668 to SW00693	Reserved.
SW00694 to SW00697	Message Relaying Status
SW00698 to SW00789	Interrupt Status
SW00790 to SW00799	Reserved.
SW00800 to SW01095	Module Information
SW01096 to SW02687	Reserved.
SW02688 to SW03199	PROFINET Controller (266IF-01) IOPS Status
SW03200 to SW05119	Motion Program Information
SW05120 to SW05247	Used by the system (system memory read).
SW05248 to SW08191	Reserved.
SW08192 to SW09215	Expansion Motion Program Information
SW09216 to SW09559	Reserved.
SW09560 to SW10627	Expansion System I/O Error Status
SW10628 to SW13699	Reserved.
SW13700 to SW14259	Expanded Unit and Module Information
SW14260 to SW15997	Reserved.
SW15998 to SW16011	Expansion System Service Execution Status
SW16012 to SW16199	Reserved.
SW16200 to SW17999	Alarm History Information
SW18000 to SW19999	Reserved.
SW20000 to SW22063	Product Information
SW22064 to SW23999	Reserved.
SW24000 to SW24321	Data Logging Execution Status
SW24322 to SW24999	Reserved.
SW24400 to SW24719	FTP Client Status and Controls
SW25000 to SW25671	Automatic Reception Status for Ethernet Communications
SW25672 to SW27599	Reserved.
SW27600 to SW29775	Maintenance Monitor
SW29776 to SW65534	Reserved.

Selecting Cables

◆ System Configurations

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

Σ-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

Code	Name		Length (L)	Order Number	Appearance
①	Computer Cable		2.5 m	JZSP-CVS06-02-E	
②	I/O Signal Cables	Soldered Connector Kit		DP9420007-E

Peripheral Devices

*1. The peripheral devices are described using a MECHATROLINK-III Communications Reference, Three-phase 200 VAC SERVOPACK as an example. The shapes of the connectors may be different for other interfaces.

*2. The connected devices depend on the interface.

For MECHATROLINK-II communications references: Other MECHATROLINK-II stations

For analog voltage/pulse train references: There is no CN6 connector.

*3. A Holding Brake Power Supply Unit is required to use a Servomotor with a Holding Brake. Holding Brake Power Supply Units for 24 VDC are not provided by Yaskawa. Obtain these from other manufacturers. Never connect Holding Brake Power Supply Units with different output voltages to a SERVOPACK. Overcurrent may result in burning in the brake.

*4. If you use a Servomotor with a Holding Brake, select a brake relay according to the power supply voltage and current of the brake. Yaskawa does not recommend any particular brake relays. Select an appropriate brake relay using the selection method of the brake relay manufacturer.

*5. The power supply for the holding brake is not provided by Yaskawa. Select a power supply based on the holding brake specifications. If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.

*6. For SERVOPACK cables, refer to the selection table for each type of SERVOPACK.

Molded-case Circuit Breakers and Fuses

Using an AC Power Supply

Use a molded-case circuit breaker and fuse to protect the power supply line. They protect the power line by shutting OFF the circuit when overcurrent is detected. Select these devices based on the information in the following tables.

Note: The following tables also provide the net values of the current capacity and inrush current. Select a fuse and a molded-case circuit breaker that meet the following conditions.

- Main circuit and control circuit: No breaking at three times the current value given in the table for 5 s.
- Inrush current: No breaking at the current value given in the table for 20 ms.

	550A	14.6	48								
	590A	21.7	68				3,5URGJ23/200UL	200			
	780A	29.6	92	0.4		114* ³ (3 Ω external)					

*1. This is the net value at the rated load.

*2. These Fuses are manufactured by MERSEN Japan.

*3. If you use a DC power supply input with any of the following SERVOPACKs, externally connect an inrush current limiting circuit and use the power ON and OFF sequences recommended by Yaskawa: SGD7S-330A, -470A, -550A, -590A, or -780A.

There is a risk of equipment damage.

For information on the power ON and OFF sequences, refer to the product manual for the type of references used by your SERVOPACK.

◆ Σ-7W SERVOPACKs

Main Circuit Power Supply	SERVOPACK Model: SGD7W-	Power Supply Capacity per SERVOPACK [kVA] ^{*1}	Current Capacity		Inrush Current		External Fuse		
			Main Circuit [Arms] ^{*1}	Control Power Supply [Arms]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Order Number ^{*2}	Current Rating [A]	Voltage Rating [Vdc]
270 VDC	1R6A	1	3.0	0.25	34	34	3,5URGJ17/40UL	40	400
	2R8A	1.9	5.8						
	5R5A	3.2	9.7				3,5URGJ17/63UL	63	
	7R6A	4.5	14						

*1. This is the net value at the rated load.

*2. These Fuses are manufactured by MERSEN Japan.

Note: If you connect more than one SERVOPACK to the same DC power supply, connect Fuses for each SERVOPACK.

SERVOPACK Main Circuit Wires

This section describes the main circuit wires for SERVOPACKs.

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

Note: To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

Wire Types

The following table shows the wire sizes and allowable currents for three bundled leads.

HIV Specifications*		Allowable Current at Surrounding Air Temperatures [Arms]		
Nominal Cross-sectional Area [mm ²]	Configuration [Wires/mm]	30°C	40°C	50°C
0.9	7/0.4	15	13	11
1.25	7/0.45	16	14	12
2.0	7/0.6	23	20	17
3.5	7/0.8	32	28	24
5.5	7/1.0	42	37	31
8.0	7/1.2	52	46	39
14.0	7/1.6	75	67	56
22.0	7/2.0	98	87	73
38.0	7/2.6	138	122	103

* This is reference data based on JIS C3317 600-V-grade heat-resistant polyvinyl chloride-insulated wires (HIV).

Crimp Terminals and Insulating Sleeves

If you use crimp terminals for wiring, use insulating sleeves. Do not allow the crimp terminals to come close to adjacent terminals or the case.

To comply with UL standards, you must use UL-compliant closed-loop crimp terminals and insulating sleeves for the main circuit terminals. Use the tool recommended by the crimp terminal manufacturer to attach the crimp terminals.

The following tables give the recommended tightening torques, closed-loop crimp terminals, and insulating sleeves in sets. Use the set that is suitable for your model and wire size.

Surge Absorbers (Varistors) and Diodes for Holding Brake Power Supplies

Surge Absorbers (varistors) and Diodes for holding brake power supplies help prevent damage to brake coils caused by voltage surges.

If you use a Servomotor with a Holding Brake and switch the brake power supply circuit on the DC side, connect a Surge Absorber (varistor) or Diode that is suitable for the brake power supply voltage and current.

◆ Surge Absorbers (Varistors) for Holding Brake Power Supplies

Use the following table as reference in selecting a Surge Absorber. Elements were selected for a Surge Absorber surrounding air temperature range of -20°C to 60°C and an ON/OFF switching frequency of 10 times or less per minute. The information in this table is for reference only, and does not ensure operation in combination with the holding brake.

Holding Brake Power Supply Voltage		24 VDC	
Manufacturer		Nippon Chemi-Con Corporation	Semitec Corporation
		Order Number	
Brake Rated Current	1 A max.	TNR5V121K	Z5D121
	2 A max.	TNR7V121K	Z7D121
	4 A max.	TNR10V121K	Z10D121
	8 A max.	TNR14V121K	Z15D121

◆ Diodes for Holding Brake Power Supplies

Select a Diode for the holding brake power supply with a rated current that is greater than that of the holding brake and with the recommended withstand voltage given in the following table.

Diodes are not provided by Yaskawa.

Holding Brake Power Supply Unit Specifications		Withstand Voltage
Rated Output Voltage	Input Voltage	
24 VDC	200 V	100 V to 200 V

Regenerative Resistors

Types of Regenerative Resistors

The following regenerative resistors can be used.

- Built-in regenerative resistors: Some models of SERVOPACKs have regenerative resistors built into them.
- External regenerative resistors: These resistors are used when the smoothing capacitor and built-in regenerative resistor in the SERVOPACK cannot consume all of the regenerative power. Use Yaskawa's SigmaSize+, an AC Servo drive capacity selection program, to determine if a regenerative resistor is required.

Note: If you use an External Regenerative Resistor, you must change the setting of the Pn600 (Regenerative Resistor Capacity) or Pn603 (Regenerative Resistance) parameters.

Selection Table

SERVOPACK Model			Built-In Regenerative Resistor	External Regenerative Resistor	Contents
SGD7S-	SGD7W-	SGD7C-			
R70A, R90A, 1R6A, 2R8A, R70F, R90F, 2R1F, 2R8F	—	—	None	Basically not required	There is no built-in regenerative resistor, but normally an external regenerative resistor is not required. Install an external regenerative resistor when the smoothing capacitor in the SERVOPACK cannot process all the regenerative power.*1
3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A	1R6A, 2R8A, 5R5A, 7R6A	1R6A, 2R8A, 5R5A, 7R6A	Standard feature*2	Basically not required	A built-in regenerative resistor is provided as a standard feature. Install an external regenerative resistor when the built-in regenerative resistor cannot process all the regenerative power.*1
470A, 550A, 590A, 780A	—	—	None	Required.*3	A built-in regenerative resistor is not provided. An External Regenerative Resistor is required. If the External Regenerative Resistor is not connected to the SERVOPACK, a Regeneration Alarm (A.300) will occur.

*1. Use Yaskawa's SigmaSize+, an AC Servo drive capacity selection program, to select an external regenerative resistor.

*2. Refer to the following section for the specifications of built-in regenerative resistors.

 **Built-In Regenerative Resistor (page 506)**

*3. Regenerative Resistor Units are available. Refer to the following sections for details.

 **Regenerative Resistor Units (page 507)**

Built-In Regenerative Resistor

The following table gives the specifications of the built-in regenerative resistors in the SERVOPACKs and the amount of regenerative power (average values) that they can process.

SERVOPACK Model			Built-In Regenerative Resistor		Regenerative Power Processing Capacity of Built-In Regenerative Resistor [W]	Minimum Allowable Resistance [Ω]
SGD7S-	SGD7W-	SGD7C-	Resistance [Ω]	Capacity [W]		
R70A, R90A, 1R6A, 2R8A, R70F, R90F, 2R1F, 2R8F	—	—	—	—	—	40
3R8A, 5R5A, 7R6A	1R6A, 2R8A	1R6A, 2R8A	40	40	8	40
120A	—	—	20	60	12	20
120A□□□008, 180A, 200A	5R5A, 7R6A	5R5A, 7R6A	12	60	12	12
330A	—	—	8	180	36	8
470A	—	—	(6.25)* ¹	(880)* ¹	(180)* ¹	5.8
550A, 590A, 780A	—	—	(3.13)* ²	(1760)* ²	(350)* ²	2.9

*1. Values in parentheses are for the optional JUSP-RA04-E Regenerative Resistor Unit.

*2. Values in parentheses are for the optional JUSP-RA05-E Regenerative Resistor Unit.

External Regenerative Resistors

Model	Specification	Mass	Wire Size	Manufacturer
RH120	70 W, 1 Ω to 100 Ω	282 g	AWG16 (1.25 mm ²)	Iwaki Musen Kenkyusho Co., Ltd.
RH150	90 W, 1 Ω to 100 Ω	412 g	AWG16 (1.25 mm ²)	
RH220	120 W, 1 Ω to 100 Ω	500 g	AWG16 (1.25 mm ²)	
RH220B	120 W, 1 Ω to 100 Ω	495 g	AWG14 (2.0 mm ²)	
RH300C	200 W, 1 Ω to 10 k Ω	850 g	AWG14 (2.0 mm ²)	
RH450	150 W, 1 Ω to 100 Ω	880 g	AWG14 (2.0 mm ²)	
RH450FY	150 W, 2 Ω to 100 Ω	1.3 kg	AWG14 (2.0 mm ²)	
RH500	300 W, 2 Ω to 50 Ω	1.4 kg	AWG14 (2.0 mm ²)	

* There is no RH450FY model that has a resistance tolerance of H (±3%).

Regenerative Resistor Units

SERVOPACK Model: SGD7S-	Regenerative Resistor Unit Model	Specifications	Allowable Power Loss
470A	JUSP-RA04-E	6.25 Ω , 880 W	180 W
550A, 590A, or 780A	JUSP-RA05-E	3.13 Ω , 1,760 W	350 W

Note: If you use only the above Regenerative Resistor Units, you do not need to change the setting of the Pn600 (Regenerative Resistor Capacity) or Pn603 (Regenerative Resistance) parameters.

◆ External Dimensions

■ JUSP-RA04-E

Unit: mm
Approx. mass: 4.0 kg

■ JUSP-RA05-E

Unit: mm
Approx. mass: 6.6 kg

Batteries for Servomotors with Absolute Encoders

If you use an absolute encoder, you can use an Encoder Cable with a Battery Case connected to it to supply power and retain the absolute position data.

You can also retain the absolute position data by supplying power from a battery on the host controller.

Note: A Battery Case is not required if you use a Servomotor with a Batteryless Absolute Encoder and connect a battery to the host controller.

Using Encoder Cables with Battery Cases

A Battery Case is attached to an Encoder Cable with a Battery Case. To replace the battery, obtain a Lithium Battery (JZSP-BA01) and mount it in the Battery Case.

Important

1. You cannot attach the Battery Case to an Incremental Encoder Cable.
2. Install the Battery Case where the surrounding air temperature is between -5°C and 60°C.

◆ Selection Table

Name	Order Number	Remarks
Battery Case (case only)	JZSP-BA01-E	The Encoder Cable and Battery are not included. (This is a replacement part for a damaged Battery Case.)
Lithium Battery	JZSP-BA01	This is a special battery that is mounted into the Battery Case.

◆ Lithium Battery Dimensional Drawing

When Installing a Battery on the Host Controller

Use a battery that meets the specifications of the host controller.

Use the recommended Battery given in the following table or the equivalent.

Inrush Current Suppression Devices

Inrush current suppression devices prevent equipment from being damaged by inrush current.

They are used only when using a SERVOPACK of 5 kW or higher (SGD7S-330A, -470A, -550A, -590A, or -780A) with a DC power supply input.

Selection Table

◆ External Inrush Current Suppression Resistors

Main Circuit Power Supply	SERVO- PACK Model: SGD7S-	External Inrush Current Suppression Resistor			Manufacturer	Inquiries
		Order Num- ber	Resis- tance [Ω]	Rated Power [W]		
270 VDC	330A	RH120-5ΩJ	5	70	Iwaki Musen Kenkyusho Co., Ltd.	Yaskawa representative
	470A					
	550A					
	590A	RH120-3ΩJ	3			
	780A					

◆ Inrush Current Suppression Resistor Short Relays

Main Circuit Power Supply	SERVO-PACK Model: SGD7S-	Main Circuit DC Current [Arms]	Contact Specification	Recommended Inrush Current Suppression Resistor Short Relay			Manufacturer
				Model	Voltage Rating [Vdc]	Current Rating [A]	
270 VDC	330A	34	NO	G9EA-1-B	400	60	OMRON Corporation
	470A	36		G9EA-1-B-CA		100	
	550A	48		G9EA-1-B-CA* ¹		200	
	590A	68		G9EC-1-B* ²			
	780A	92					

*1. Connect two Relays in parallel. Also, maintain the same resistance between the DC power supply and SERVOPACK for the wiring for each Relay.

*2. This Relay is applicable only when the temperature of the Relay installation environment is 50°C or less.

Software

SigmaSize+: AC Servo Capacity Selection Program

You can use the SigmaSize+ to select Servomotors and SERVOPACKs. There are two versions of the software: A cloud version* and a stand-alone version.

The software supports all standard servo products sold by Yaskawa.

* SigmaSize+ is available in Japan only. Contact your Yaskawa representative for information on this program.

◆ Features

- Provides a vast amount of new product information.
- Lets you select servo products with a wizard.
- You can access and reuse previously entered data.

◆ System Requirements

Item	System Requirement
Browser	Internet Explorer version 10 or later
OS	Windows Vista or Windows 7 (32-bit or 64-bit edition)*
CPU	Pentium 200 MHz min.
Memory	64 MB min. (96 MB or greater recommended)
Available Hard Disk Space	20 MB min.

* 64-bit OS is applicable only for the stand-alone version.

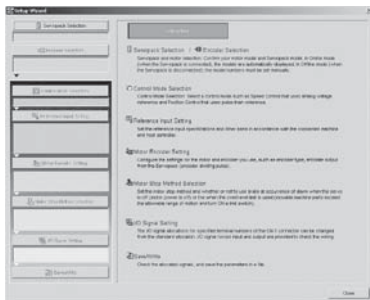

SigmaWin+: AC Servo Drive Engineering Tool

The SigmaWin+ Engineering Tool is used to set up and optimally tune Yaskawa Σ -series Servo Drives.

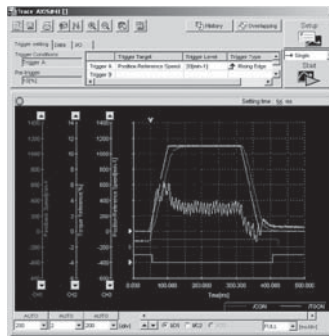

◆ Features

- Set parameters with a wizard.
- Display SERVOPACK data on a computer just like you would on an oscilloscope.
- Estimate moments of inertia and measure vibration frequencies.
- Display alarms and alarm diagnostics.

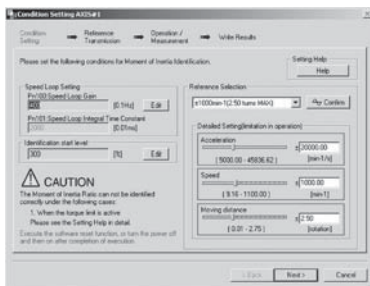

Setting Parameters with a Wizard

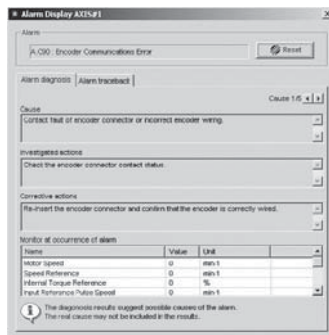

Displaying SERVOPACK Data on a Computer Just Like You Would on an Oscilloscope

Estimating Moments of Inertia and Measuring Vibration Frequencies

Displaying Alarms and Alarm Diagnostics

◆ System Requirements

Item	System Requirement	
	Ver.5	Ver.7
Supported Languages	English and Japanese	Japanese, English, and Chinese (simplified)
OS	Windows XP, Windows Vista, or Windows 7 (32-bit or 64-bit edition)	Windows 10, Windows 8, Windows 8.1, or Windows 7 (32-bit or 64-bit edition)
Software Environment	–	.NET Framework 4.5, .NET Framework 4.6
CPU	Pentium 200 MHz min.	1 GHz min. (recommended)
Memory	64 MB min. (96 MB or greater recommended)	1 GB min. (recommended)
Available Hard Disk Space	For Standard Setup: 350 MB min. (400 MB or greater recommended for installation)	500 MB min.
Browser used to display Help	–	Internet Explorer 9 or higher

MPE720 System Integrated Engineering Tool

MPE720 Ver.7 is a system integrated Engineering Tool that provides the complete development functionality to set up, adjust, program, maintain, and inspect not only Controller programs but also all of the devices necessary to design machine installations, including Servo Drives, AC Drives, and Distributed I/O Devices.

It is installed in a PC and operated on a PC interface through a connection between the PC and Machine Controller.

◆ Features

■ Complete Adjustment and Maintenance of Equipment Drive Devices

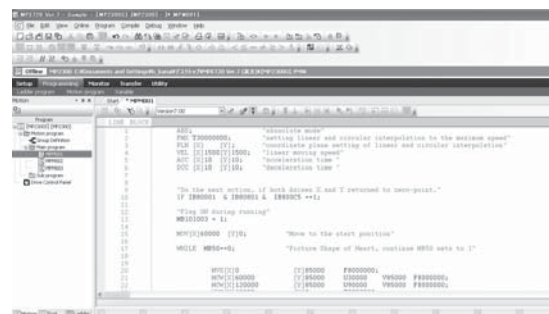

MPE720 Ver.7 connected to the Σ -7C or MP series machine controllers can be used to set up, adjust, and maintain Servo Drives, AC Drives, and I/O Devices connected to a network. There is no need to change connections, which increases efficiency.

■ Greater Efficiency with the Best Programming Method

Ladder Programming

Motion Programming

- The new user interface lets just about anyone easily use the MPE720.
- An improved EXPRESSION instruction simplifies programming calculation in ladder diagrams.
- Support is provided for all types of control, including position, speed, torque, and phase control.
- Positioning and interpolation can be programmed with one instruction.
- Programs can be very easily edited using expressions in a text format.
- New variable programming can provide PC-like programming.

◆ System Requirements (Ver.7.37 or higher)

Item	Specification
CPU	1 GHz or more recommended (manufactured by Intel or other companies)
Memory Capacity	1 GB or more recommended*
Available Hard Disk Space	700 MB or more (includes standard workspace memory after installation of MPE720)
Display Resolution	1280 × 800 pixels or more recommended
CD Drive	1 (only for installation)
Communications Ports	Ethernet, PCI Express, PCI, USB, and RS-232C
OS	Windows 10, Windows 8, Windows 8.1, or Windows 7 (32-bit or 64-bit)
.NET Environment	.NET Framework 4.5, 4.6
Supported Languages	English and Japanese

* Expand memory if other application programs are run simultaneously with MPE720 on the same computer. Performance may be slow due to the use of memory by multiple application programs that are run simultaneously.

Design Revision Order

A, B...

* Either a 24-VDC or a 48-VDC power supply can be used for the main circuit. The control power supply must be 24 VDC.

Ratings and Specifications

Ratings

Model SGDv-	1R7	2R9
Continuous Output Current [Arms]	1.7	2.9
Instantaneous Max. Output Current [Arms]	4.1	8.6
Main Circuit Power Supply	24 VDC±15% 48 VDC±15%	24 VDC±15% 48 VDC±15%
Control Power Supply	24 VDC ±15%	
Overvoltage Category	I	

* You can use either 24 or 48 VDC for the main circuit power supply. If using a 24-VDC input, the torque-motor speed characteristics of the servomotor will be less than the characteristics of a 48-VDC input. For details, refer to the following section.

 *Torque-Motor Speed Characteristics (page 7)*

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 40°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor given in *Torque-Motor Speed Characteristics (page 7)*.

Specifications

◆ Analog Voltage Reference/Pulse Train Reference

Item		Specification
Drive Method		Sine-wave current drive with PWM control
Feedback		Encoder: 20-bit (incremental/absolute)
Operating Conditions	Surrounding Air Temperature	0°C to +55°C
	Storage Temperature	-20°C to +85°C
	Ambient Humidity	90% RH or less With no freezing or condensation
	Storage Humidity	
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²
	Protection Class	IP10
	Pollution Degree	2
	Altitude	1000 m or less
	Others	Free of static electricity, strong electromagnetic fields, magnetic fields or exposure to radioactivity
Applicable Standards		Refer to the following section for international standards.  <i>International Standards (page 580)</i>
Mounting		Base-mounted
Performance	Speed Control Range	1:5000 (The lower limit of the speed control range must be lower than the point at which the rated torque does not cause the servomotor to stop.)
	Speed Regulation*	Load Regulation
		Voltage Regulation
		Temperature Regulation
	Torque Control Tolerance (Repeatability)	±1%
Soft Start Time Setting		0 to 10 s (Can be set individually for acceleration and deceleration.)

Peripheral Devices

- *1. The peripheral devices are described using a MECHATROLINK-III Communications Reference, Three-phase 200 VAC SERVOPACK as an example. The shapes of the connectors may be different for other interfaces.
- *2. The connected devices depend on the interface.
For MECHATROLINK-II communications references: Other MECHATROLINK-II stations
For analog voltage/pulse train references: There is no CN6 connector.
- *3. A Holding Brake Power Supply Unit is required to use a Servomotor with a Holding Brake. Holding Brake Power Supply Units for 24 VDC are not provided by Yaskawa. Obtain these from other manufacturers.
Never connect Holding Brake Power Supply Units with different output voltages to a SERVOPACK. Overcurrent may result in burning in the brake.
- *4. If you use a Servomotor with a Holding Brake, select a brake relay according to the power supply voltage and current of the brake. Yaskawa does not recommend any particular brake relays. Select an appropriate brake relay using the selection method of the brake relay manufacturer.
- *5. The power supply for the holding brake is not provided by Yaskawa. Select a power supply based on the holding brake specifications. If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.
- *6. For SERVOPACK cables, refer to the following sections for details.
 **Selecting Cables** (page 523)

◆ Typical Main Circuit Wiring Examples

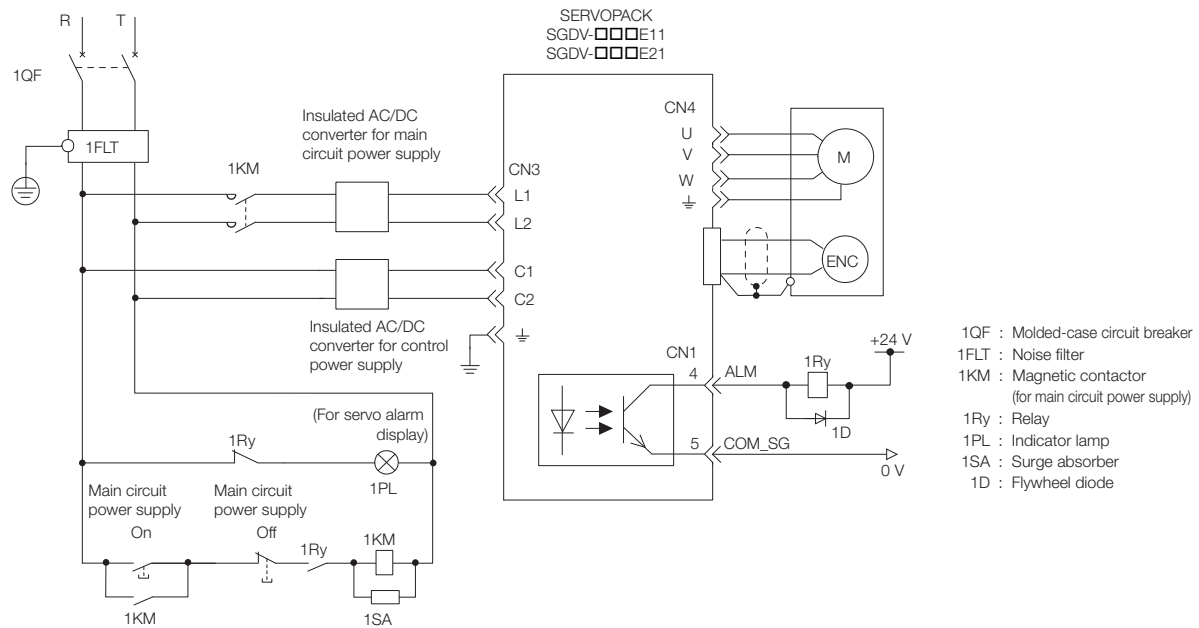

WARNING
High voltage may still remain in the SERVOPACK after the power has been turned OFF. To avoid electric shocks, do not touch the power supply terminals. Be sure that the remaining voltage has been discharged before wiring and inspecting.

- Turn ON the power supplies for the control and for the main circuit at the same time, or first turn ON the control power and then the power for the main circuit power. When turning OFF the power, first turn OFF the power for the main circuit and then control power.
- Use separate power supplies for the main circuit AC/DC power supply and control AC/DC power supply. Use power supplies with double or reinforced insulation and that have also been certified for safety standards.
- Do not connect the following devices to the control power line: motors, solenoids, or other devices with large load fluctuations, and contactors or other devices that generate surge voltage. If connected, internal elements may deteriorate or a fuse may melt.

Figure 1: Main circuit wiring diagram. The diagram illustrates the power supply configuration for a servo motor system. It includes a main circuit power supply with a 1QF circuit breaker, a 1FLT noise filter, and a 1KM magnetic contactor. The power is split into two paths: one for the main circuit (L1, L2) and another for the control power supply (C1, C2). The control power supply is connected to a 24V source through a 1Ry relay and a 1D flywheel diode. The servo motor is connected to the main circuit through a 1KM magnetic contactor. The diagram also shows the connection of the servo motor's ground (GND) to the main circuit ground. A legend on the right defines the components: 1QF (Molded-case circuit breaker), 1FLT (Noise filter), 1KM (Magnetic contactor), 1Ry (Relay), 1PL (Indicator lamp), 1SA (Surge absorber), and 1D (Flywheel diode).

■ SERVOPACKs with MECHATROLINK-II or -III Communications Reference

◆ General Precautions for Wiring

Important

- Use a molded-case circuit breaker (1QF) or a fuse to protect the servo system. Always use a molded-case circuit breaker or a fuse to protect the servo system from accidents involving different power voltages or other accidents.
- Install a ground fault detector.
The SERVOPACK does not have a built-in protective circuit for grounding. For a safer system, install a ground fault detector to protect against overloads and short circuits, or install a ground fault detector that is combined with a molded-case circuit breaker.
- Do not turn the power OFF and ON more than necessary.
 - Do not use the SERVOPACK for applications that require the power to be frequently turned OFF and ON. Such applications will cause elements in the SERVOPACK to deteriorate.
 - As a guideline, wait at least one hour before restarting the power after turning OFF the power during operation.

To ensure safe, stable application of the servo system, observe the following precautions when wiring.

Observe the following precautions when wiring the main circuit.

- Use shielded twisted-pair wires or shielded, multi-core, twisted-pair wires for I/O signal cables and the encoder cables.
- The maximum wiring length is 3 m for I/O signal cables, 50 m for encoder cables or servomotor main circuit cables, and 10 m for control power and main circuit power cables.

Observe the following precautions when grounding.

- Use a cable that is as thick as possible.
- Ground the SERVOPACK to a resistance of 100 Ω or less.
- Be sure to ground at only one point.
- Ground the servomotor directly if the servomotor is insulated from the machine.

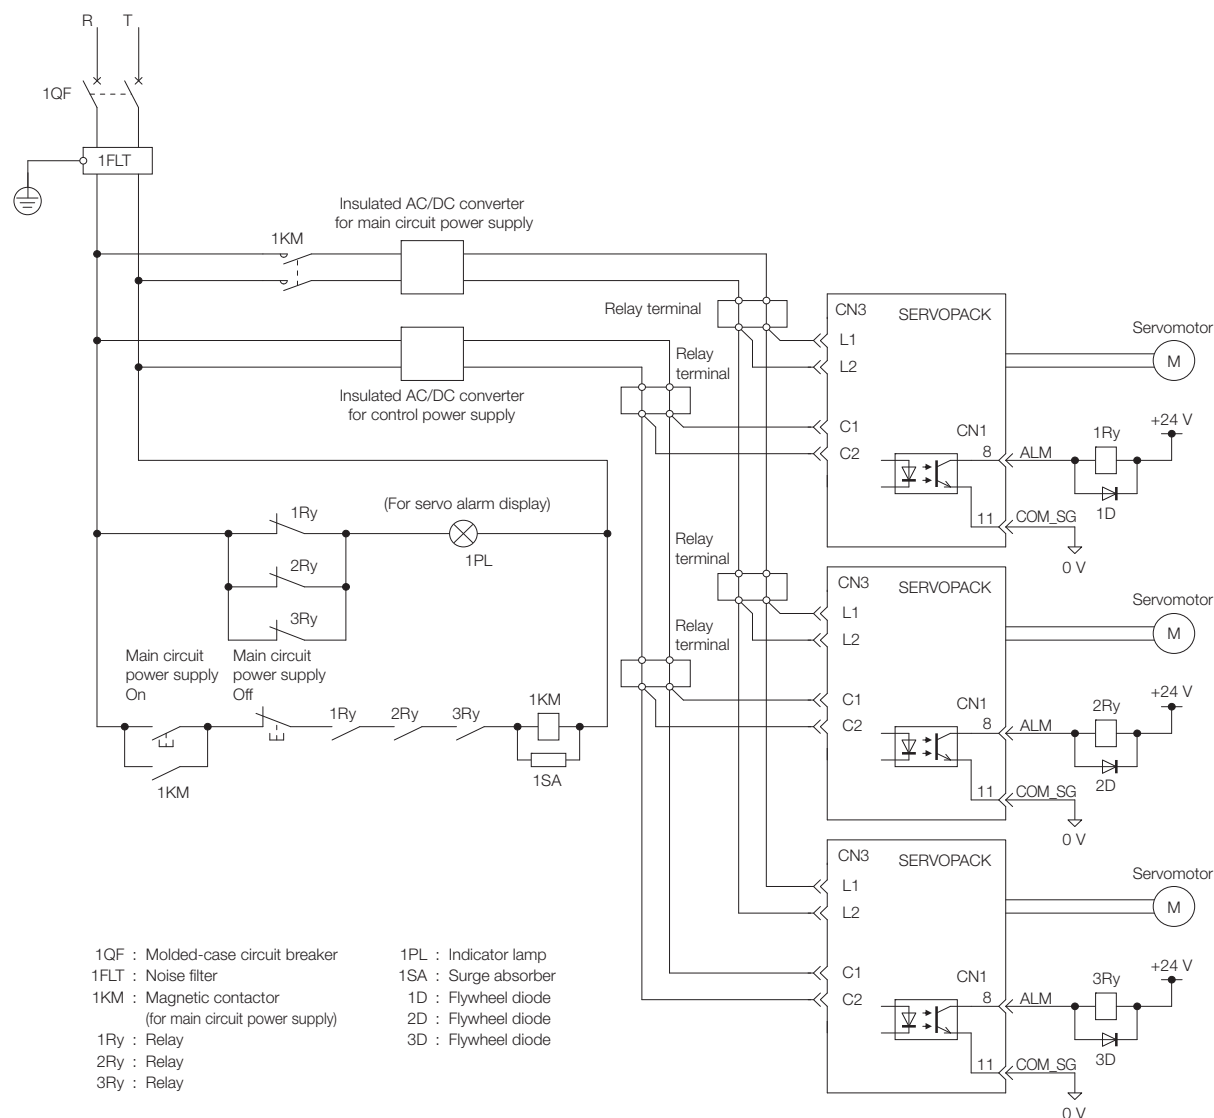

The signal cable conductors are as thin as 0.2 mm² or 0.3 mm². Do not impose excessive bending force or tension.

◆ Precautions When Using More Than One SERVOPACK

This section shows an example of wiring and precautions when more than one SERVOPACK is used.

■ Wiring Example

Wire the circuit so that each alarm detection relay (1 Ry, 2 Ry, 3 Ry) can be separately activated to issue an alarm. After a SERVOPACK alarm is activated, the ALM output signal transistor is turned OFF.

■ Precautions

1. Multiple SERVOPACKs can share a single molded-case circuit breaker (1QF) and a single noise filter. Always select a molded-case circuit breaker and a noise filter that have a large enough capacity to handle all SERVOPACKs used. When selecting a breaker and a filter, also consider load conditions.
2. When using SERVOPACKs with DC power, four signals for the sequencing of one SERVOPACK are connected at only one location (COM_SG) for common signal grounding. If alarm signals for multiple SERVOPACKs are connected in series, an alarm signal may not be received correctly when an alarm is issued.

SERVOPACK Main Circuit Wire

◆ For 48 VDC and 24 VDC

Cables	Terminal Symbol	SERVOPACK Model SGD V-		Remarks
		1R7E	2R9E	
Power Supply Cable	L1, L2, C1, C2, \oplus	JZSP-CF1G00-□□-E		 <i>Selecting Cables</i> (page 523)
Servomotor Main Circuit Cable	U, V, W, \oplus	JZSP-CF1M00-□□-E (For motors without brakes) JZSP-CF1M10-□□-E (For motors with brakes) JZSP-CF1M20-□□-E (Flexible type cable for motors without brakes) JZSP-CF1M30-□□-E (Flexible type cable for motors with brakes)		 <i>Selecting Cables</i> (page 15)

If assembling a main circuit cable for the SERVOPACK, observe the following conditions.

Important

- The specified wire sizes are for use when the three lead cables are bundled and when the rated electric current is applied with a surrounding air temperature of 40°C
- Use a wire with a minimum withstand voltage of 100 V.
- Use insulated wire with an outer diameter of 1.85 mm or smaller. The wire size is restricted due to the specifications of the contact used.
- If cables are bundled in PVC pipes or metal ducts, remember to consider resulting reduction of the allowable current.
- Use heat-resistant wire for high surrounding air or panel temperatures.
- Use a cable with a maximum length of 10 m for the main circuit's power and one with a maximum length of 50 m for the motor's main circuit.

Cables		SERVOPACK Model SGD V-		Remarks
		1R7E	2R9E	
CN3 For Main Circuit Power	Connector	43025-0600 (by Molex Japan LLC)		6 poles

Molded-case Circuit Breaker and Fuse Capacity

◆ Input Power Capacity

Main Circuit Power Supply	SERVOPACK Model	Servomotor Model	Power Supply Capacity per SERVOPACK W	Input Current Capacity		
				Main Circuit Continuous Rated Current A	Main Circuit Instantaneous Maximum Current A	Control Circuit A
24 VDC	SGDV-1R7E□1A	SGMMV-B3E2A□□	108	1.5	5.5	0.3
		SGMMV-B5E2A□□				
		SGMMV-B9E2A□□		2.0		
	SGDV-2R9E□1A	SGMMV-A1E2A□□	165	1.5	8.5	
		SGMMV-A2E2A□□		2.5		
		SGMMV-A3E2A□□		3.5		
48 VDC	SGDV-1R7E□1A	SGMMV-B3E2A□□	121	1.0	3.0	
		SGMMV-B5E2A□□	135		3.5	
		SGMMV-B9E2A□□	169		4.5	
	SGDV-2R9E□1A	SGMMV-A1E2A□□	165	1.0	4.5	
		SGMMV-A2E2A□□	290	1.5	7.5	
		SGMMV-A3E2A□□	411	2.0	10.5	

Note: The power supply capacities indicated in the table are values at an instantaneous maximum load. The main circuit's power supply capacity and the input current capacity are indicated in net values.

◆ Molded-case Circuit Breaker and Fuse Capacity

Power Supply	Output Voltage	SERVOPACK Model SGDV-	Current Capacity of MCCB or Fuse (Main + Control Circuit)	
			Power Supply Voltage at 100 VAC Arms	Power Supply Voltage at 200 VAC Arms
Main Circuit Power Supply	24 VDC	1R7E 2R9E	5.5	2.9
	48 VDC		9.0	4.8
Control Circuit Power Supply	24 VDC		—	—

Note: Select an MCCB or a fuse that satisfies the following braking characteristics.

- No braking at the inrush current value of the used power supply for 20 ms.

◆ AC/DC Power Supply

Use an AC/DC power supply that is appropriate for the voltage of the main circuit and the model of the SERVOPACK and servomotor. The recommended AC/DC power supplies are shown in the following table.

Main Circuit Power Sup- ply	SERVOPACK Model	Servomotor Model	Recommended AC/DC Power Supply*	
			Model	Manufacturer
24 VDC	SGDV-1R7E□1A	SGMMV-B3E2A□□	HWS150-24	TDK-Lambda Corp.
		SGMMV-B5E2A□□		
		SGMMV-B9E2A□□		
	SGDV-2R9E□1A	SGMMV-A1E2A□□	HWS300-24	
		SGMMV-A2E2A□□		
		SGMMV-A3E2A□□		
48 VDC	SGDV-1R7E□1A	SGMMV-B3E2A□□	HWS300-48	
		SGMMV-B5E2A□□		
		SGMMV-B9E2A□□		
	SGDV-2R9E□1A	SGMMV-A1E2A□□	HWS300P-48	
		SGMMV-A2E2A□□		
		SGMMV-A3E2A□□		

* Use double-insulated power supplies certified for the following international safety standards: UL60950 or EN60950.

Noise Filters

◆ Noise Filter Selection

Use of the following noise filter is recommended for the AC side.

Power Supply AC Side Voltage	SERVOPACK Model SGD-	Recommended Noise Filter		
		Model	Specifications	Leakage Current
100 VAC/ 200 VAC	1R7E, 2R9E	FN2070-6-07	Single-phase 250V 6A	0.734 mA 230 VAC/50 Hz

Note: RoHS-compliant models are not available. Contact the manufactures when in need of an RoHS-compliant model.

Important

Some noise filters have large amounts of leakage current. The grounding measures taken also affect the extent of the leakage current. If necessary, select an appropriate leakage current detector or leakage current breaker taking into account the grounding measures that are used and leakage current from the noise filter. Contact the manufacturer of the noise filter for details.

◆ External Dimensions (Units: mm)

FN Type (by Schaffner EMC, Inc.)

Model	FN2070-6-07
Dimensional Drawings	
	

Magnetic Contactors

◆ Magnetic Contactor Selection

A magnetic contactor is required when external sequence circuit is used to turn the power of a SERVOPACK OFF and ON.

The magnetic contactor shown in the following table is recommended on the AC side of the main circuit's power supply.

Be sure to attach a surge absorber (surge absorber unit etc.) to the excitation coil of the magnetic contactor.

Power Supply AC Side Voltage	SERVOPACK Model SGDV-	Magnetic Contactor	
		Model	Specifications
100 VAC/ 200 VAC	1R7E, 2R9E	SC-03	(RoHS)

Note: Contact Fuji Electric FA Components & Systems Co., Ltd.

◆ External Dimensions (Units: mm)

■ SC-03

- Mounting methods: The following methods ①, ②, ③ are available.

- ①...34 × (48 to) 52
- ②...30 × 48
- ③...35 × 60

- Mounting screw: 2-M4

Use the two mounting holes on the diagonal line to mount a contactor.

Approx. Mass : 0.32 kg

Option Modules

■ Features

Feedback Option Module

Fully-Closed Module 538

- High-precision and high-response positioning by using feedback from detector (such as an external encoder) installed on the machine.
- High resolution with external encoders (linear scales).

Safety Option Module

Safety Module 548

- Safety functions equivalent to these stipulated in international standard: IEC Safe Torque Off (STO), Safe Stop 1 (SS1), Safe Stop 2 (SS2), Safely-Limited Speed (SLS)
- Two safety functions (A and B) provided. Stopping functions can be allocated individually to these safety functions.
- Monitoring times can be changed using parameters.

Fully-Closed Module

Safety Module

Specifications

Item		Specification
Operating Conditions	Surrounding Air Temperature	0°C to +55°C
	Storage Temperature	−20°C to +85°C
	Surrounding Air Humidity	90% relative humidity max.
	Storage Humidity	90% relative humidity max.
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²
	Degree of Protection	IP10
	Pollution Degree	2
	Altitude	1000 m max.
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity

System Configuration

Refer to the section for the relevant Servomotor for information on Servomotor Main Circuit Cables. To select an External Linear Encoder, refer to *Recommended Linear Encoders* (pages 306 to 308). The connection devices and cables for each type of encoder are also given. Prepare the required items.

Note: 1. Refer to the following section for information on peripheral devices.

🔧 **Peripheral Devices** (page 482)

2. If you purchase a Fully-Closed Module by itself, refer to the following manual for the method to mount it to the SERVOPACK.

📖 **Σ -V Series/ Σ -V Series for Large-Capacity Models/ Σ -7 Series Installation Guide Fully-Closed Module** (Manual No.: TOBP C720829 03)

◆ Connections to Linear Encoder from Dr. JOHANNES HEIDENHAIN GmbH

■ Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a Yaskawa Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) in the Serial Converter Unit.

*1. When using a JZDP-J00□-□□□ Serial Converter Unit, do not use a Yaskawa Linear Encoder Cable that is longer than 3 m.

*2. Contact Dr. JOHANNES HEIDENHAIN GmbH for details on the cables (analog 1 Vp-p output, D-sub 15-pin, male).

No.	Item	Model
①	Fully-Closed Module (Purchased as a set with the SERVOPACK)	Without options: SGD7S□□□□□0A000□□1 With options: SGD7S□□□□□0A■■■□□1 Note: When a hardware option is mounted, ■■■ is replaced with a three-digit number that specifies the type of option.
	Fully-Closed Module (Purchased alone)	Fully-Closed Module SGD7S-OFA01A Option Case Kit*1 SGD7S-OZA01A
②	Serial Converter Unit Cable	JZSP-CLP70-□□-E*3
③	Serial Converter Unit*2	JZDP-H003-000
④	Linear Encoder Cable	JZSP-CLL30-□□-E*3

*1. One Option Case Kit is required for each SERVOPACK.

The set includes the module cover, PCB mounting plate, and two mounting screws.

*2. Refer to the following manual for the specifications of the Serial Converter Units.

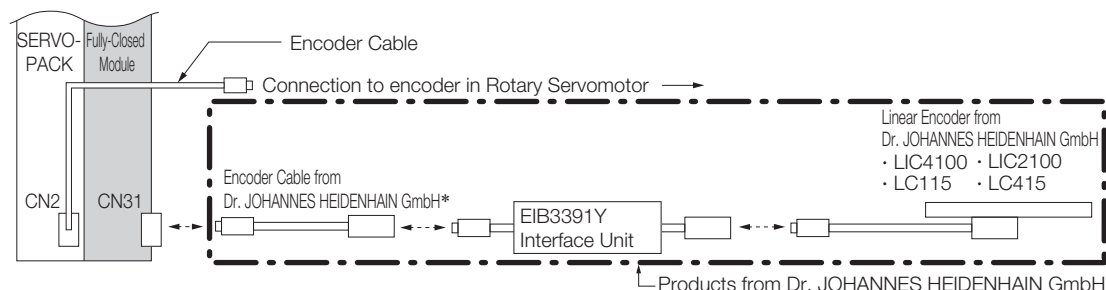

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*3. The boxes (□□) in the model number are replaced with the cable length when ordering.

(1 m = 01, 3 m = 03, 5 m = 05, 10 m = 10, 15 m = 15, and 20 m = 20)

■ Connections When Using a Yaskawa Serial Interface for the Output Signals

- LIC4100, LIC2100, LC115, or LC415 Linear Encoder with EIB3391Y Interface Unit

* Use an Encoder Cable from Dr. JOHANNES HEIDENHAIN GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed Encoder Cable specifications.

• LIC4190 or LIC2190 Series Linear Encoder

* Use an Encoder Cable from Dr. JOHANNES HEIDENHAIN GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed Encoder Cable specifications.

• ECA4412/RCN□□10/ROC□310 Rotary Encoder with EIB3391Y Interface Unit

* Use an Encoder Cable from Dr. JOHANNES HEIDENHAIN GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed Encoder Cable specifications.

◆ Connection to Linear Encoder from RSF Elektronik GmbH

■ Connections When Using a Yaskawa Serial Interface for the Output Signals

• MC15Y Series Linear Encoder

* Use an Encoder Cable from RSF Elektronik GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed Encoder Cable specifications.

◆ Connections to Linear Encoder from Renishaw Plc

■ Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a Yaskawa Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) in the Serial Converter Unit.

*1. Contact Renishaw plc for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Renishaw plc. However, the BID and DIR signals are not connected.

*2. If you use the origin signals with a Linear Encoder from Renishaw plc, the origin may sometimes be falsely detected.

If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

No.	Item	Model
①	Fully-Closed Module (Purchased as a set with the SERVOPACK)	Without options: SGD7S□□□□□0A000□□1 With options:SGD7S□□□□□0A■■■□□1 Note: When a hardware option is mounted, ■■■ is replaced with a three-digit number that specifies the type of option.

③	Serial Converter Unit*2	JZDP-H005-000
④	Linear Encoder Cable	JZSP-CLL00-□□-E*3

*1. When ordering a SERVOPACK and a Fully-Closed Module separately, use this Fully-Closed Module model number.

*2. Refer to the following manual for the specifications of the Serial Converter Units.

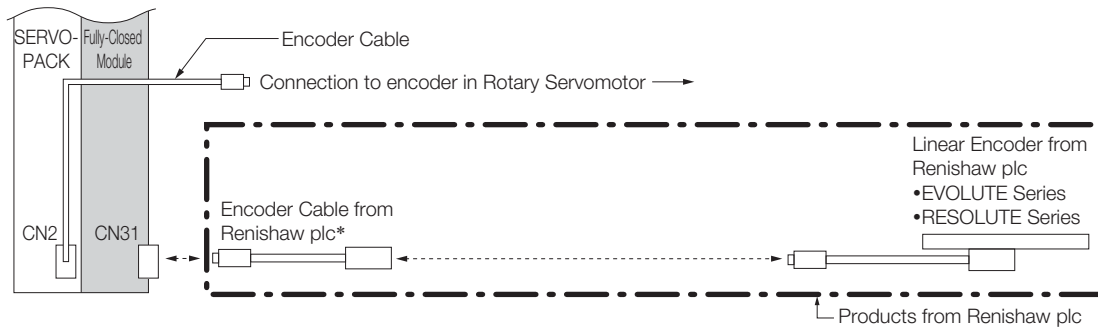

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual* (Manual No.: SIEP S800001 32)

*3. The boxes (□□) in the model number are replaced with the cable length when ordering.

(1 m = 01, 3 m = 03, 5 m = 05, 10 m = 10, 15 m = 15, and 20 m = 20)

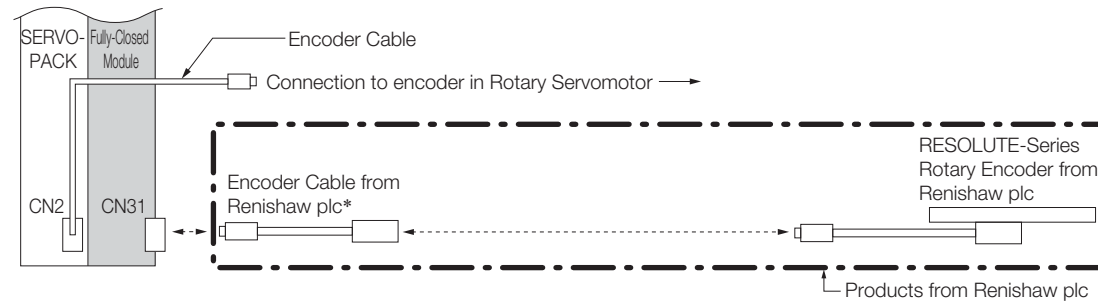

■ Connections When Using a Yaskawa Serial Interface for the Output Signals

• EVOLUTE Series or RESOLUTE Series Linear Encoder

* Use an Encoder Cable from Renishaw plc. Contact Renishaw plc for detailed Encoder Cable specifications.

• RESOLUTE Series Rotary Encoder

* Use an Encoder Cable from Renishaw plc. Contact Renishaw plc for detailed Encoder Cable specifications.

◆ Connection to Linear Encoder from RLS d.o.o.

■ Connections When Using a Yaskawa Serial Interface for the Output Signals

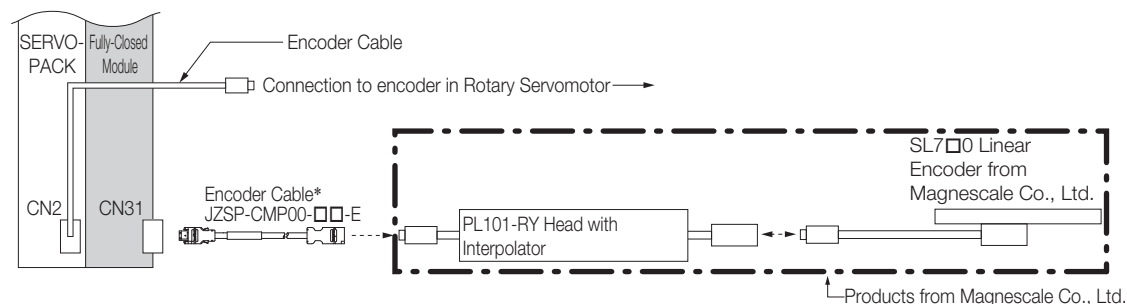

• LA11YA Series Linear Encoder

* Use an Encoder Cable from RLS d.o.o. Contact RLS d.o.o. or Renishaw plc for detailed Encoder Cable specifications.

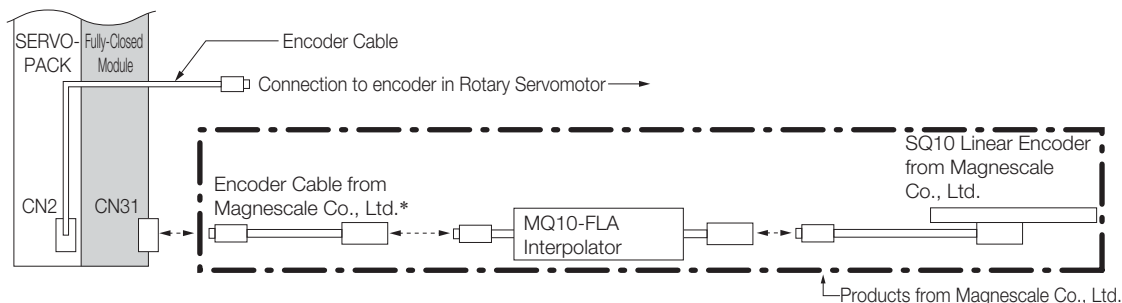

◆ Connections to Linear Encoder from Magescale Co., Ltd.

■ SL7□0 Linear Encoder and PL101-RY Sensor Head with Interpolator

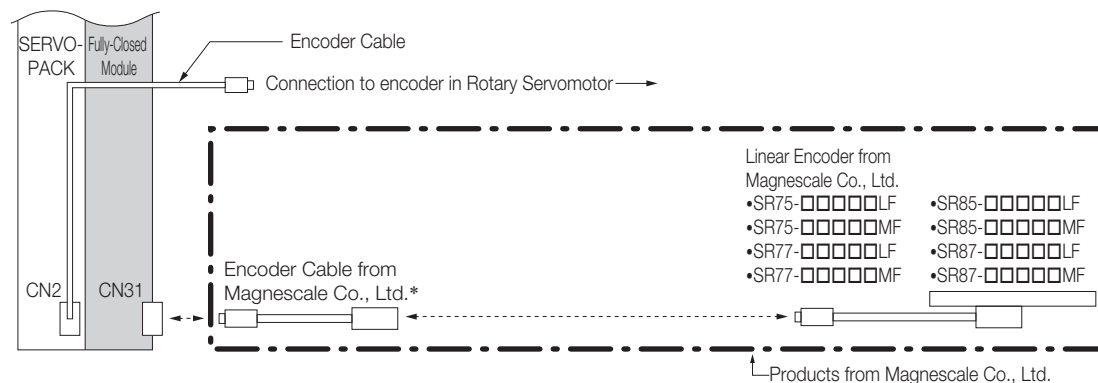

* The boxes (□□) in the model number are replaced with the cable length when ordering.
(3 m = 03, 5 m = 05, 10 m = 10, 15 m = 15, and 20 m = 20)

■ SmartSCALE Linear Encoder (SQ10 Scale + MQ10-FLA Interpolator)

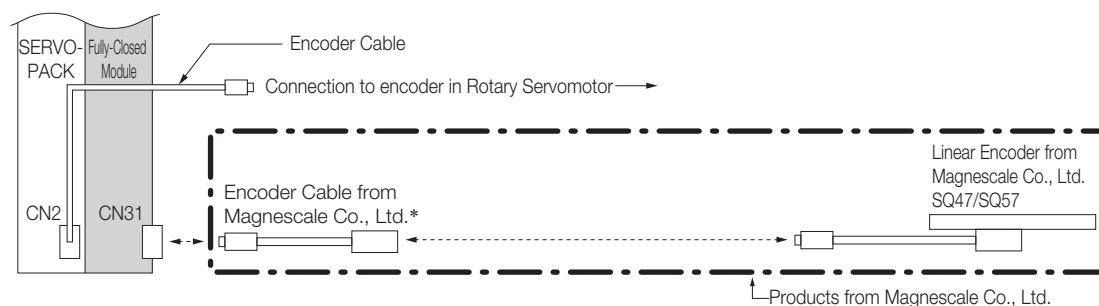

* Use an Encoder Cable from Magescale Co., Ltd. The maximum cable length in this case is 15 m.
Contact Magescale Co., Ltd. for detail Encoder Cable specifications.

■ SR-75, SR-77, SR-85, and SR-87 Linear Encoders

* Use an Encoder Cable from Magescale Co., Ltd. Contact Magescale Co., Ltd. for detailed Encoder Cable specifications.

■ SmartSCALE Linear Encoders (SQ47 and SQ57)

* Use an Encoder Cable from Magescale Co., Ltd. Contact Magescale Co., Ltd. for detailed Encoder Cable specifications.

■ RU77-4096ADF/RU77-4096AFFT01 Absolute Rotary Encoders

* To connect the SERVOPACK and Rotary Encoder, use a CE28-Series Extension Cable for RU77 from Magnescale Co., Ltd.

Note: The RU77 is a single-turn absolute rotary encoder.

◆ Connections to Linear Encoders from Mitutoyo Corporation

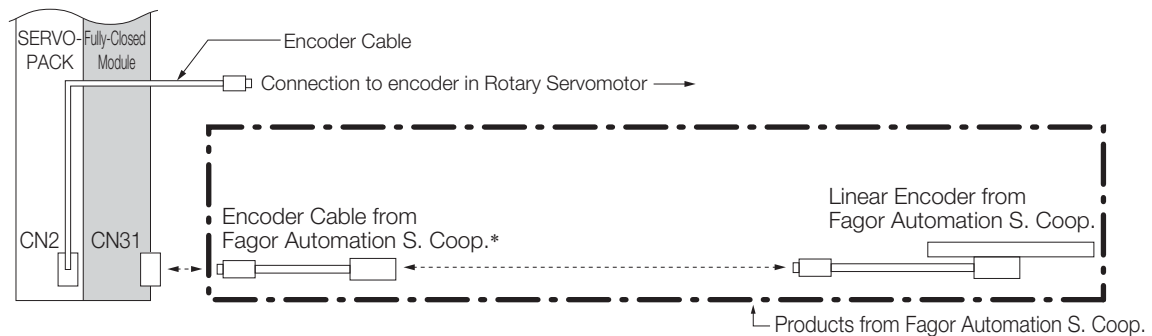

■ ST78□□A/ST13□□□ Linear Encoders

* The boxes (□□) in the model number are replaced with the cable length when ordering.

(1 m = 01, 3 m = 03, 5 m = 05, 10 m = 10, 15 m = 15, and 20 m = 20)

◆ Connections to Linear Encoders from Fagor Automation S. Coop.

* To connect the SERVOPACK and Rotary Encoder, use a Encoder Cable from Fagor Automation S. Coop.

Contact Fagor Automation S. Coop. or the representative for detailed Encoder Cable specifications.

■ Connections to Linear Encoder from Canon Precision Inc.

* Use Encoder Cables from Canon Precision Inc. For detailed specifications of the Encoder Cables, consult Canon Precision Inc. or its sales representative.

External Dimensions

Refer to pages 470 to 481 for the external dimensions of the individual SERVOPACKs.

MEMO

Safety Option Module

Safety Module

This Safety Module implements safety functions that conform to EN ISO 13849-1 (the harmonized EU Machinery Directive) and are specified in the individual IEC 61800-5-2 standard. You can combine it with an SGD7S SERVOPACK to design optimum safety in a machine system according to industry needs.

Model Designations

◆ Purchasing a Module in a Set with the SERVOPACK

To order SERVOPACKs with a Safety Module attached, use the following model numbers.

SGD7S^{*1} R70 A 00 A 000 010

*1. The model number of a SERVOPACK with an Option Module is not hyphenated after SGD7S.

*2. You can use these models with either a single-phase or three-phase power supply input.

*3. Refer to the following manual for details.

 *Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual* (Manual No.: SIEP S800001 73)

Note: Contact your Yaskawa representative for information on combining options.

◆ Purchasing a Module Separately

When ordering SERVOPACKs and Safety Modules separately, use the following Safety Module model number.

SGDV-OA01A

- One Option Case Kit is required for each SERVOPACK.
Option Case Kit model: SGDV-OZA01A
- INDEXER Modules, DeviceNet Modules, and Fully-Closed Modules cannot be used with Safety Modules.
- The encoders without Yaskawa's serial converter units cannot be connected to SERVOPACKs with a Safety Module.

Applicable Standards and Functions

◆ Applicable Safety Standards

Safety Standard	Applicable Standard	Applicable Products	
		SERVOPACK	SERVOPACK + Safety Module
Safety of Machinery	EN ISO13849-1: 2015 IEC 60204-1	✓	✓
Functional Safety	IEC 61508 Series IEC 62061 IEC 61800-5-2	✓	✓
EMC	IEC 61326-3-1	✓	✓

✓: Applicable

◆ Support for Functions Defined in IEC61800-5-2

Safety functions are implemented by using the hard wire base block (HWBB) in the SERVOPACK.

Safety Function	Description	Applicable Products	
		SERVOPACK	SERVOPACK + Safety Module
Safe BaseBlock Function (SBB function)	This safety function is equivalent to an STO function. (It shuts OFF the power supply from the SERVOPACK to the motor.)	✓	✓
Safe BaseBlock with Delay Function (SBB-D function)	This safety function is equivalent to an SS1 function. (It monitors the deceleration operation of the motor for the specified time and then shuts OFF the power supply from the SERVOPACK to the motor.)	—	✓
Safe Position Monitor with Delay Function (SPM-D function)	This safety function is equivalent to an SS2 function. (It monitors the deceleration operation of the motor for the specified time and then monitors the position after the motor stops.)	—	✓
Safely-Limit Speed with Delay Function (SLS-D function)	This safety function is equivalent to an SLS function. (It monitors the deceleration operation of the motor for the specified time and then monitors the speed of the motor to confirm that it remains in the allowable range.)	—	✓

✓: Applicable

Specifications

Capacity Selection for Servomotors

Selecting the Servomotor Capacity

Use Yaskawa's SigmaSize+, an AC servo drive capacity selection program, to select the Servomotor capacity. With the SigmaSize+, you can find the optimum Servomotor capacity by simply selecting and entering information according to instructions from a wizard.

Refer to the following selection examples to select Servomotor capacities with manual calculations rather than with the above software.

Capacity Selection Example for a Rotary Servomotor: For Speed Control

1. Mechanical Specifications

Item	Code	Value
Load Speed	v_L	15 m/min
Linear Motion Section Mass	m	250 kg
Ball Screw Length	ℓ_B	1.0 m
Ball Screw Diameter	d_B	0.02 m
Ball Screw Lead	P_B	0.01 m
Ball Screw Material Density	ρ	$7.87 \times 10^3 \text{ kg/m}^3$
Gear Ratio	R	2 (gear ratio: 1/2)
External Force on Linear Motion Section	F	0 N

Item	Code	Value
Gear and Coupling Moment of Inertia	J_G	$0.40 \times 10^{-4} \text{ kg}\cdot\text{m}^2$
Number of Feeding Operations	n	40 operations/min
Feeding Distance	ℓ	0.275 m
Feeding Time	tm	1.2 s max.
Friction Coefficient	μ	0.2
Mechanical Efficiency	η	0.9 (90%)

2. Operation Pattern

$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

$$\text{If } t_a = t_d,$$

$$t_a = tm - \frac{60\ell}{v_L} = 1.2 - \frac{60 \times 0.275}{15} = 1.2 - 1.1 = 0.1 \text{ (s)}$$

$$t_c = 1.2 - 0.1 \times 2 = 1.0 \text{ (s)}$$

3. Motor Speed

- Load shaft speed $n_L = \frac{v_L}{P_B} = \frac{15}{0.01} = 1,500 \text{ (min}^{-1}\text{)}$

- Motor shaft speed $n_M = n_L \cdot R = 1,500 \times 2 = 3,000 \text{ (min}^{-1}\text{)}$

4. Load Torque

$$T_L = \frac{(9.8 \cdot \mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 250 + 0) \times 0.01}{2\pi \times 2 \times 0.9} = 0.43 \text{ (N}\cdot\text{m)}$$

5. Load Moment of Inertia

- Linear motion section

$$J_{L1} = m \left(\frac{P_B}{2\pi R} \right)^2 = 250 \times \left(\frac{0.01}{2\pi \times 2} \right)^2 = 1.58 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

- Ball screw

$$J_B = \frac{\pi}{32} \rho \cdot \ell_B \cdot d_B^4 \cdot \frac{1}{R^2} = \frac{\pi}{32} \times 7.87 \times 10^3 \times 1.0 \times (0.02)^4 \cdot \frac{1}{2^2} = 0.31 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

- Coupling $J_G = 0.40 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$
- Load moment of inertia at motor shaft

$$J_L = J_{L1} + J_B + J_G = (1.58 + 0.31 + 0.40) \times 10^{-4} = 2.29 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

6. Load Moving Power

$$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3,000 \times 0.43}{60} = 135 \text{ (W)}$$

7. Load Acceleration Power

$$P_a = \left(\frac{2\pi}{60} n_M \right)^2 \frac{J_L}{ta} = \left(\frac{2\pi}{60} \times 3,000 \right)^2 \times \frac{2.29 \times 10^{-4}}{0.1} = 226 \text{ (W)}$$

8. Servomotor Provisional Selection

① Selection Conditions

- $T_L \leq$ Motor rated torque
- $\frac{(P_O + P_a)}{2} <$ Provisionally selected Servomotor rated output $< (P_O + P_a)$
- $n_M \leq$ Rated motor speed
- $J_L \leq$ Allowable load moment of inertia

The following Servomotor meets the selection conditions.

- SGM7J-02A Servomotor

② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Output	200 (W)
Rated Motor Speed	3,000 (min ⁻¹)
Rated Torque	0.637 (N·m)
Instantaneous Maximum Torque	2.23 (N·m)
Motor Moment of Inertia	$0.263 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$
Allowable Load Moment of Inertia	$0.263 \times 10^{-4} \times 15 = 3.94 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$

9. Verification of the Provisionally Selected Servomotor

- Verification of required acceleration torque:

$$T_P = \frac{2\pi n_M (J_M + J_L)}{60ta} + T_L = \frac{2\pi \times 3,000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} + 0.43$$

$$\approx 1.23 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of required deceleration torque:

$$T_S = \frac{2\pi n_M (J_M + J_L)}{60td} - T_L = \frac{2\pi \times 3,000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} - 0.43$$

$$\approx 0.37 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of effective torque value:

$$T_{rms} = \sqrt{\frac{T_P^2 \cdot t_a + T_L^2 \cdot t_c + T_S^2 \cdot t_d}{t}} = \sqrt{\frac{(1.23)^2 \times 0.1 + (0.43)^2 \times 1.0 + (0.37)^2 \times 0.1}{1.5}}$$

$\approx 0.483 \text{ (N}\cdot\text{m)} < \text{Rated torque...Satisfactory}$

10. Result

It has been verified that the provisionally selected Servomotor is applicable.

The torque diagram is shown below.

Capacity Selection Example for a Rotary Servomotor: For Position Control

1. Mechanical Specifications

Item	Code	Value
Load Speed	v_L	15 m/min
Linear Motion Section Mass	m	80 kg
Ball Screw Length	ℓ_B	0.8 m
Ball Screw Diameter	d_B	0.016 m
Ball Screw Lead	P_B	0.005 m
Ball Screw Material Density	ρ	$7.87 \times 10^3 \text{ kg/m}^3$
External Force on Linear Motion Section	F	0 N
Coupling Mass	m_C	0.3 kg

Item	Code	Value
Coupling Outer Diameter	d_C	0.03 m
Number of Feeding Operations	n	40 rotation/min
Feeding Distance	ℓ	0.25 m
Feeding Time	t_m	1.2 s max.
Electrical Stopping Precision	δ	$\pm 0.01 \text{ mm}$
Friction Coefficient	μ	0.2
Mechanical Efficiency	η	0.9 (90%)

2. Speed Diagram

$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

If $t_a = t_d$ and $t_s = 0.1 \text{ (s)}$,

$$t_a = t_m - t_s - \frac{60 \ell}{v_L} = 1.2 - 0.1 - \frac{60 \times 0.25}{15} = 0.1 \text{ (s)}$$

$$t_c = 1.2 - 0.1 - 0.1 \times 2 = 0.9 \text{ (s)}$$

3. Motor Speed

- Load shaft speed

$$n_L = \frac{v_L}{P_B} = \frac{15}{0.005} = 3,000 \text{ (min}^{-1}\text{)}$$

- Motor shaft speed

Direct coupling gear ratio $1/R = 1/1$

Therefore, $n_M = n_L \cdot R = 3,000 \times 1 = 3,000 \text{ (min}^{-1}\text{)}$

4. Load Torque

$$T_L = \frac{(9.8 \mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 80 + 0) \times 0.005}{2\pi \times 1 \times 0.9} = 0.139 \text{ (N}\cdot\text{m)}$$

5. Load Moment of Inertia

- Linear motion section

$$J_{L1} = m \left(\frac{P_B}{2\pi R} \right)^2 = 80 \times \left(\frac{0.005}{2\pi \times 1} \right)^2 = 0.507 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

- Ball screw $J_B = \frac{\pi}{32} \rho \cdot l_B \cdot d_B^4 = \frac{\pi}{32} \times 7.87 \times 10^3 \times 0.8 \times (0.016)^4 = 0.405 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$

- Coupling $J_C = \frac{1}{8} m_C \cdot d_C^2 = \frac{1}{8} \times 0.3 \times (0.03)^2 = 0.338 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$

- Load moment of inertia at motor shaft

$$J_L = J_{L1} + J_B + J_C = 1.25 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

6. Load Moving Power

$$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3,000 \times 0.139}{60} = 43.7 \text{ (W)}$$

7. Load Acceleration Power

$$P_a = \left(\frac{2\pi}{60} n_M \right)^2 \frac{J_L}{ta} = \left(\frac{2\pi}{60} \times 3,000 \right)^2 \times \frac{1.25 \times 10^{-4}}{0.1} = 123.4 \text{ (W)}$$

8. Servomotor Provisional Selection

① Selection Conditions

- $T_L \leq$ Motor rated torque
- $\frac{(P_O + P_a)}{2} <$ Provisionally selected Servomotor rated output $< (P_O + P_a)$
- $n_M \leq$ Rated motor speed
- $J_L \leq$ Allowable load moment of inertia

The following Servomotor meets the selection conditions.

- SGM7J-01A Servomotor

② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Output	100 (W)
Rated Motor Speed	3,000 (min ⁻¹)
Rated Torque	0.318 (N·m)
Instantaneous Maximum Torque	1.11 (N·m)
Motor Moment of Inertia	$0.0659 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$
Allowable Load Moment of Inertia	$0.0659 \times 10^{-4} \times 35 = 2.31 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$
Encoder Resolution	16,777,216 pulses/rev [24 bits]

9. Verification of the Provisionally Selected Servomotor

- Verification of required acceleration torque:

$$T_P = \frac{2\pi n_M (J_M + J_L)}{60ta} + T_L = \frac{2\pi \times 3,000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} + 0.139$$

$$\approx 0.552 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of required deceleration torque:

$$T_S = \frac{2\pi n_M (J_M + J_L)}{60td} - T_L = \frac{2\pi \times 3,000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} - 0.139$$

$$\approx 0.274 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of effective torque value:

$$T_{rms} = \sqrt{\frac{T_P^2 \cdot ta + T_L^2 \cdot tc + T_S^2 \cdot td}{t}} = \sqrt{\frac{(0.552)^2 \times 0.1 + (0.139)^2 \times 0.9 + (0.274)^2 \times 0.1}{1.5}}$$

$$\approx 0.192 \text{ (N}\cdot\text{m)} < \text{Rated torque...Satisfactory}$$

It has been verified that the provisionally selected Servomotor is applicable in terms of capacity. Position control is considered next.

10. Positioning Resolution

The electrical stopping precision δ is ± 0.01 mm, so the positioning resolution Δ_ℓ is 0.01 mm.

The ball screw lead P_B is 0.005 m, so the number of pulses per motor rotation is calculated with the following formula.

$$\text{The number of pulses per revolution (pulses)} = \frac{P_B}{\Delta_\ell} = \frac{5 \text{ mm/rev}}{0.01 \text{ mm}} = 500 \text{ (pulses/rev)} < \text{Encoder resolution [16777216 (pulses/rev)]}$$

The number of pulses per motor rotation is less than the encoder resolution (pulses/rev), so the provisionally selected Servomotor can be used.

11. Reference Pulse Frequency

The load speed v_L is 15 m/min, or $1,000 \times 15/60$ mm/s and the positioning resolution (travel distance per pulse) is 0.01 mm/pulse, so the reference pulse frequency is calculated with the following formula.

$$v_s = \frac{1,000 v_L}{60 \times \Delta_\ell} = \frac{1,000 \times 15}{60 \times 0.01} = 25,000 \text{ (pps)}$$

The reference pulse frequency is less than the maximum input pulse frequency,* so the provisionally selected Servomotor can be used.

*Refer to the specifications in the SERVOPACK manual for the maximum input pulse frequency.

It has been verified that the provisionally selected Servomotor is applicable for position control.

Capacity Selection Example for Direct Drive Servomotors

1. Mechanical Specifications

Item	Code	Value	Item	Code	Value
Turntable Mass	w	12 kg	Acceleration/ Deceleration Time	t_p $= t_{psa}$ $= t_{psd}$	0.1 s
Turntable Diameter	D_T	300 mm	Operating Frequency	t_f	2 s
Rotational Angle per Cycle	θ	270 deg	Load Torque	T_L	0 N·m
Positioning Time	t_0	0.35 s	Settling Time	t_s	0.1 s

2. Motor Speed of Direct Drive Servomotor

$$N_O = \frac{\theta}{360} \times \frac{60}{(t_0 - t_p - t_s)} = \frac{270}{360} \times \frac{60}{(0.35 - 0.1 - 0.1)} = 300 \text{ (min}^{-1}\text{)}$$

3. Operation Pattern

4. Load Moment of Inertia

$$J_L = \frac{1}{8} \times D_T^2 \times W = \frac{1}{8} \times (300 \times 10^{-3})^2 \times 12 = 0.135 \text{ (kg} \cdot \text{m}^2\text{)}$$

5. Load Acceleration/Deceleration Torque

$$T_a = J_L \times 2\pi \times \frac{N_O/60}{t_p} = 0.135 \times 2\pi \times \frac{300/60}{0.1} = 42.4 \text{ (N} \cdot \text{m)}$$

6. Provisional Selection of Direct Drive Servomotor

① Selection Conditions

- Load acceleration/deceleration torque < Instantaneous maximum torque of Direct Drive Servomotor
- Load moment of inertia < Allowable load moment of inertia ratio (J_R) × Moment of inertia of Direct Drive Servomotor (J_M)

The following Servomotor meets the selection conditions.

- SGMCV-17CEA11

② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Torque	17 (N·m)
Instantaneous Maximum Torque	51 (N·m)
Moment of Inertia (J_M)	0.00785 (kg·m ²)
Allowable Load Moment of Inertia Ratio (J_R)	25

7. Verification of the Provisionally Selected Servomotor

- Verification of required acceleration torque:

$$T_{Ma} = \frac{(J_L + J_M) \times N_O}{9.55 \times t_{psa}} = \frac{(0.135 + 0.00785) \times 300}{9.55 \times 0.1}$$

$$\approx 44.9 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of required deceleration torque:

$$T_{Md} = -\frac{(J_L + J_M) \times N_O}{9.55 \times t_{psd}} = -\frac{(0.135 + 0.00785) \times 300}{9.55 \times 0.1}$$

$$\approx -44.9 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of effective torque value:

$$T_{rms} = \sqrt{\frac{T_{Ma}^2 \times t_{psa} + T_L^2 \times t_c + T_{Md}^2 \times t_{psd}}{t_f}} = \sqrt{\frac{44.9^2 \times 0.1 + 0^2 \times 0.05 + (-44.9)^2 \times 0.1}{2}}$$

$$\approx 14.2 \text{ (N}\cdot\text{m)} < \text{Rated torque...Satisfactory}$$

$$t_c = \text{Time of constant motor speed} = t_0 - t_s - t_{psa} - t_{psd}$$

8. Result

It has been verified that the provisionally selected Servomotor is applicable.
The torque diagram is shown below.

Servomotor Capacity Selection Example for Linear Servomotors

1. Mechanical Specifications

Item	Code	Value
Load Mass	m_W	1 kg
Table Mass	m_T	2 kg
Motor Speed	v	2 m/s
Feeding Distance	l	0.76 m
Friction Coefficient	μ	0.2

Item	Code	Value
Acceleration Time	t_a	0.02 s
Constant-speed Time	t_c	0.36 s
Deceleration Time	t_d	0.02 s
Cycle Time	t	0.5 s
External Force on Linear Motion Section	F	0 N

2. Operation Pattern

3. Steady-State Force (Excluding Servomotor Moving Coil)

$$F_L = \{9.8 \times \mu \times (m_W + m_T)\} + F = 9.8 \times 0.2 \times (1 + 2) + 0 = 5.88 \text{ (N)}$$

4. Acceleration Force (Excluding Servomotor Moving Coil)

$$F_P = (m_W + m_T) \times \frac{v}{t_a} + F_L = (1 + 2) \times \frac{2}{0.02} + 5.88 = 305.88 \text{ (N)}$$

5. Provisional Selection of Linear Servomotor

① Selection Conditions

- $F_P \leq \text{Maximum force} \times 0.9$
- $F_S \leq \text{Maximum force} \times 0.9$
- $F_{rms} \leq \text{Rated force} \times 0.9$

The following Servomotor Moving Coil and Magnetic Way meet the selection conditions.

- SGLGW-60A253CP Linear Servomotor Moving Coil
- SGLGM-60□□□C Linear Servomotor Magnetic Way

② Specifications of the Provisionally Selected Servomotor

Item	Value
Maximum Force	440 (N)
Rated Force	140 (N)
Moving Coil Mass (m_M)	0.82 (kg)
Servomotor Magnetic Attraction (F_{att})	0 (N)

6. Verification of the Provisionally Selected Servomotor

- Steady-State Force

$$F_L = \mu \{9.8 \times (m_W + m_T + m_M) + F_{att}\} = 0.2 \{9.8 \times (1 + 2 + 0.82) + 0\} = 7.5 \text{ (N)}$$

- Verification of Acceleration Force

$$F_P = (m_W + m_T + m_M) \times \frac{v}{t_a} + F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} + 7.5$$

$$= 389.5 \text{ (N)} \leq \text{Maximum force} \times 0.9 (= 396 \text{ N}) \dots \text{Satisfactory}$$

- Verification of Deceleration Force

$$F_S = (m_W + m_T + m_M) \times \frac{v}{t_a} - F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} - 7.5$$

$$= 374.5 \text{ (N)} \leq \text{Maximum force} \times 0.9 (= 396 \text{ N}) \dots \text{Satisfactory}$$

- Verification of Effective Force

$$F_{rms} = \sqrt{\frac{F_P^2 \cdot t_a + F_L^2 \cdot t_c + F_S^2 \cdot t_d}{t}} = \sqrt{\frac{389.5^2 \times 0.02 + 7.5^2 \times 0.36 + 374.5^2 \times 0.02}{0.5}}$$

$$= 108.3 \text{ (N)} \leq \text{Rated force} \times 0.9 (= 132.3 \text{ N}) \dots \text{Satisfactory}$$

7. Result

It has been verified that the provisionally selected Servomotor is applicable.

Capacity Selection for Regenerative Resistors

If the regenerative power exceeds the amount that can be absorbed by charging the smoothing capacitor, a regenerative resistor is used.

Regenerative Power and Regenerative Resistance

The rotational energy of a driven machine such as a Servomotor that is returned to the SERVOPACK is called regenerative power. The regenerative power is absorbed by charging a smoothing capacitor. When the regenerative power exceeds the capacity of the capacitor, it is consumed by a regenerative resistor. (This is called resistance regeneration.)

The Servomotor is driven in a regeneration state in the following circumstances:

- While decelerating to a stop during acceleration/deceleration operation.
- While performing continuous downward operation on a vertical axis.
- During continuous operation in which the Servomotor is rotated by the load (i.e., a negative load).

Important

You cannot use the resistance regeneration provided by the SERVOPACK for continuous regeneration. For continuous operation with a negative load, you must design a system that also includes a Power Regenerative Converter or Power Regenerative Unit (for example, Yaskawa model D1000 or R1000). If regenerative power is not appropriately processed, the regenerative energy from the load will exceed the allowable range and damage the SERVOPACK. Examples of negative loads are shown below.

- Motor Drive to Lower Objects without a Counterweight
- Motor Drive for Feeding

Types of Regenerative Resistors

The following regenerative resistors can be used.

- Built-in regenerative resistor: A regenerative resistor that is built into the SERVOPACK. Not all SERVOPACKs have built-in regenerative resistors.
- External Regenerative Resistor: A regenerative resistor that is connected externally to a SERVOPACK. These resistors are used when the smoothing capacitor and built-in regenerative resistor in the SERVOPACK cannot consume all of the regenerative power.

SERVOPACK Model	Built-In Regenerative Resistor	External Regenerative Resistor
SGD7S-	R70A, R90A, 1R6A, 2R8A, R70F, R90F, 2R1F, 2R8F	None
	3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A	Standard feature *1
	470A, 550A, 590A, 780A	None
SGD7W-	1R6A, 2R8A, 5R5A, 7R6A	Standard feature *1
SGD7C-	1R6A, 2R8A, 5R5A, 7R6A	Standard feature *1
		Basically not required
		Basically not required
		Required *2
		Basically not required
		Basically not required

*1. Refer to the following section for the specifications of the regenerative resistors built into SERVOPACKs.

Built-In Regenerative Resistor (page 506)

*2. An optional external Regenerative Resistor Unit is required.

Selecting External Regenerative Resistor

Use Yaskawa's SigmaSize+, an AC servo drive capacity selection program, to determine if you need an External Regenerative Resistor.

You can use one of the following two methods to manually calculate whether an External Regenerative Resistor is required. Refer to the following information if you do not use the SigmaSize+.

 *Simple Calculation* (page 563)

 *Calculating the Regenerative Energy* (page 568)

Simple Calculation

When driving a Servomotor with a horizontal shaft, check if an External Regenerative Resistor is required using the following calculation method.

Note: If you use the SGD7S-470A, -550A, -590A, or -780A, always connect an External Regenerative Resistor.

◆ SERVOPACKs without Built-in Regenerative Resistors:

SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

The total amount of energy that can be charged in the capacitors is given in the following table. If the rotational energy (E_S) of the Servomotor and load exceeds the value in the following table, then connect an External Regenerative Resistor.

Applicable SERVOPACK		Processable Regenerative Energy (Joules)	Remarks
SGD7S-	R70A, R90A, 1R6A	24.2	Value when main circuit input voltage is 200 VAC
	2R8A	31.7	
	R70F, R90F, 2R1F	28.6	Value when main circuit input voltage is 100 VAC
	2R8F	48.4	

Calculate the rotational energy (E_S) of the servo system with the following equation:

$$E_S = J \times (n_M)^2 / 182 \text{ (Joules)}$$

- $J = J_M + J_L$
- J_M : Servomotor moment of inertia ($\text{kg} \cdot \text{m}^2$)
- J_L : Load moment of inertia at motor shaft ($\text{kg} \cdot \text{m}^2$)
- n_M : Servomotor operating motor speed (min^{-1})

◆ SERVOPACKs with Built-in Regenerative Resistors:

SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, and -330A

SGD7W-1R6A, -2R8A, -5R5A, and -7R6A

SGD7C-1R6A, -2R8A, -5R5A, and -7R6A

Use the following equation to calculate the allowable frequency for regenerative operation. The following operating conditions were used: Operation cycle from a speed of 0 to the maximum motor speed to 0 (min^{-1}) with acceleration and deceleration operation. If the frequency of the operation cycle ($1/T$) is lower than the allowable frequency in the calculation results, an External Regenerative Resistor is not necessary. Finally, do the calculation with the actual operating speed and load moment of inertia to determine if an External Regenerative Resistor is required.

• Operating Conditions for Calculating the Allowable Regenerative Frequency

$$\text{Allowable frequency} = \frac{\text{Allowable frequency for regenerative operation for Servomotor without load}^*}{(1+n)} \times \left(\frac{\text{Maximum motor speed}}{\text{Operating motor speed}} \right)^2 (\text{time/min})$$

• $n = J_L/J_M$

• J_M : Servomotor moment of inertia ($\text{kg}\cdot\text{m}^2$)

• J_L : Load moment of inertia at motor shaft ($\text{kg}\cdot\text{m}^2$)

* Assign the related value given in the table in *Allowable Frequency for Regenerative Operation for Servomotor without Load* (pages 565 to 567).

■ Allowable Frequency for Regenerative Operation for Servomotor without Load

*1. This value is in combination with the SGD7S-120A.

*2. This value is in combination with the SGD7S-180A.

Calculating the Regenerative Energy

This section shows how to calculate the regenerative resistor capacity for the acceleration/deceleration operation shown in the following figure.

• Calculation Procedure for Regenerative Resistor Capacity

Step	Item	Code	Formula
1	Calculate the rotational energy of the Servomotor.	E_S	$E_S = Jn_M^2/182$
2	Calculate the energy consumed by load loss during the deceleration period	E_L	$E_L = (\pi/60) n_M T_L t_D$ Note: If the load loss is unknown, calculate the value with E_L set to 0.
3	Calculate the energy lost from Servomotor winding resistance.	E_M	(Value calculated from the graphs in ◆ Servomotor Winding Resistance Loss on page 570) $\times t_D$
4	Calculate the energy that can be absorbed by the SERVOPACK.	E_C	Calculate from the graphs in ◆ SERVOPACK-absorbable Energy on page 569
5	Calculate the energy consumed by the regenerative resistor.	E_K	$E_K = E_S - (E_L + E_M + E_C)$
6	Calculate the required regenerative resistor capacity (W).	W_K	$W_K = E_K/(0.2 \times T)$

Note: 1. The 0.2 in the equation for calculating W_K is the value when the regenerative resistor's utilized load ratio is 20%.

2. The units for the various symbols are given in the following table.

Code	Description	Code	Description
E_S to E_K	Energy in joules (J)	T_L	Load torque (N·m)
W_K	Required regenerative resistor capacity (W)	t_D	Deceleration stopping time (s)
J	$= J_M + J_L$ (kg·m ²)	T	Servomotor repeat operation cycle (s)
n_M	Servomotor motor speed (min ⁻¹)		

If the value of W_K does not exceed the capacity of the built-in regenerative resistor of the SERVOPACK, an External Regenerative Resistor is not required. If the value of W_K exceeds the capacity of the built-in regenerative resistor, install an External Regenerative Resistor with a capacity equal to the value for W calculated above.

◆ SERVOPACK-absorbable Energy

The following figures show the relationship between the SERVOPACK's input power supply voltage and its absorbable energy.

■ Σ -7S SERVOPACKs

■ Σ -7W SERVOPACKs

■ Σ -7C SERVOPACKs

◆ Servomotor Winding Resistance Loss

The following figures show the relationship for each Servomotor between the Servomotor's generated torque and the winding resistance loss.

*1. Only Small-capacity Servomotors with Cores (SGM7F-□□A, -□□B, -□□C, -□□D) are in compliance with the UL standards. Medium-capacity Servomotors with Cores (SGMCM-□□M, -□□N) do not comply with the UL standards.

*2. Only Small-capacity Coreless Servomotors (SGMCS-□□B, -□□C, -□□D, -□□E) are in compliance with the UL standards. Medium-capacity Coreless Servomotors (SGMCS-□□M, -□□N) do not comply with the UL standards.

*3. Only models with “-E” at the end of model numbers are in compliance with the standards. Estimates are available for those models. Contact your Yaskawa representative for details.

*4. Estimates are provided for RoHS-compliant products. The model numbers have an “-E” suffix.

*5. The model numbers of the Magnetic Ways of Linear Servomotors are given in parentheses.

*6. CE Marking certification has been received. Contact your Yaskawa representative if the CE Marking label is required.

*7. Certification has not yet been received for SGLTW-35A□□□H and SGLTW-50A□□□H Linear Servomotors.

MEMO

Warranty

◆ Details of Warranty

■ Warranty Period

The warranty period for a product that was purchased (hereinafter called "delivered product") is one year from the time of delivery to the location specified by the customer or 18 months from the time of shipment from the Yaskawa factory, whichever is sooner.

■ Warranty Scope

Yaskawa shall replace or repair a defective product free of charge if a defect attributable to Yaskawa occurs during the above warranty period. This warranty does not cover defects caused by the delivered product reaching the end of its service life and replacement of parts that require replacement or that have a limited service life.

This warranty does not cover failures that result from any of the following causes.

- Improper handling, abuse, or use in unsuitable conditions or in environments not described in product catalogs or manuals, or in any separately agreed-upon specifications
- Causes not attributable to the delivered product itself
- Modifications or repairs not performed by Yaskawa
- Use of the delivered product in a manner in which it was not originally intended
- Causes that were not foreseeable with the scientific and technological understanding at the time of shipment from Yaskawa
- Events for which Yaskawa is not responsible, such as natural or human-made disasters

◆ Limitations of Liability

- Yaskawa shall in no event be responsible for any damage or loss of opportunity to the customer that arises due to failure of the delivered product.
- Yaskawa shall not be responsible for any programs (including parameter settings) or the results of program execution of the programs provided by the user or by a third party for use with programmable Yaskawa products.
- The information described in product catalogs or manuals is provided for the purpose of the customer purchasing the appropriate product for the intended application. The use thereof does not guarantee that there are no infringements of intellectual property rights or other proprietary rights of Yaskawa or third parties, nor does it construe a license.
- Yaskawa shall not be responsible for any damage arising from infringements of intellectual property rights or other proprietary rights of third parties as a result of using the information described in catalogs or manuals.

◆ Suitability for Use

- It is the customer's responsibility to confirm conformity with any standards, codes, or regulations that apply if the Yaskawa product is used in combination with any other products.
- The customer must confirm that the Yaskawa product is suitable for the systems, machines, and equipment used by the customer.
- Consult with Yaskawa to determine whether use in the following applications is acceptable. If use in the application is acceptable, use the product with extra allowance in ratings and specifications, and provide safety measures to minimize hazards in the event of failure.
 - Outdoor use, use involving potential chemical contamination or electrical interference, or use in conditions or environments not described in product catalogs or manuals
 - Nuclear energy control systems, combustion systems, railroad systems, aviation systems, vehicle systems, medical equipment, amusement machines, and installations subject to separate industry or government regulations
 - Systems, machines, and equipment that may present a risk to life or property
 - Systems that require a high degree of reliability, such as systems that supply gas, water, or electricity, or systems that operate continuously 24 hours a day
 - Other systems that require a similar high degree of safety
- Never use the product for an application involving serious risk to life or property without first ensuring that the system is designed to secure the required level of safety with risk warnings and redundancy, and that the Yaskawa product is properly rated and installed.
- The circuit examples and other application examples described in product catalogs and manuals are for reference. Check the functionality and safety of the actual devices and equipment to be used before using the product.
- Read and understand all use prohibitions and precautions, and operate the Yaskawa product correctly to prevent accidental harm to third parties.

◆ Specifications Change

The names, specifications, appearance, and accessories of products in product catalogs and manuals may be changed at any time based on improvements and other reasons. The next editions of the revised catalogs or manuals will be published with updated code numbers. Consult with your Yaskawa representative to confirm the actual specifications before purchasing a product.
